	10. Contingency measures (initiating procedures, alternative locations for contingency compensatory mitigation, funding mechanism). 11. All nursery plants used in restoration shall be inspected for sudden oak death. If a federally and/or state-listed plant species has the potential be impacted, an HMMP shall be submitted to the USFWS and/or CDFW for review, and federal and/or state take authorization may be required by these agencies. Within 30 days of completion of monitoring, a final monitoring report shall be submitted to the City for review and approval, documenting compliance with the HMMP and achievement of success criteria. **BIO-1(e) Endangered/Threatened Special-status Species Habitat Assessments and Protocol Surveys.** For development facilitated by the plan where the project-specific biological analysis (Mitigation Measure BIO-1[a]) determines that suitable habitat may be present for federal- or state-listed, candidate, or proposed species, the City shall require protocol habitat assessments/surveys be completed in accordance with current CDFW and/or USFWS protocols prior to issuance of any construction permits. If, through consultation with the CDFW and/or USFWS, it is determined that protocol habitat assessments/surveys are not required, the project applicant shall be required to complete and document this consultation and submit it to the City prior to issuance of any construction permits. Each protocol has different survey and timing requirements. The applicant shall be responsible for ensuring they understand the protocol requirements and shall hire a qualified biologist to conduct protocol surveys. (Note: if a federally and/or state-listed wildlife species will be impacted, federal and/or state take authorization may be required by USFWS and CDFW.) **BIO-1(f) Endangered/Threatened Animal Species Avoidance and Minimization.** For development facilitated by the plan where potential impacts to aquatic and/or terrestrial animal species are identified by the project-specific Biological Resources Screening and Assessment required under Mitigation Measure BIO-1(a), the following measures shall be applied. 1. Ground disturbance shall be limited to the minimum necessary to complete the project. A qualified biologist shall flag the project limits of disturbance. Areas of special biological concern within or adjacent to the limits of disturbance shall have highly visible orange construction fencing installed between said area and the limits of disturbance.	

Impact	Mitigation Measure (s)	Residual Impact
	2. All projects occurring within/adjacent to aquatic habitats (including riparian habitats and wetlands) shall be completed between April 1 and October 31, if feasible, to avoid impacts to sensitive aquatic species. Any work outside these dates would require project-specific approval from the City and may be subject to regulatory agency approval. 3. All projects occurring within or adjacent to sensitive habitats that may support federally and/or state-listed endangered/threatened species shall have a CDFW- and/or USFWS-approved biologist present during all initial ground disturbing/vegetation clearing activities. Once initial ground disturbing/vegetation clearing activities have been completed, said biologist shall conduct daily pre-activity clearance surveys for endangered/threatened species. Alternatively, and upon approval of the CDFW and/or USFWS, said biologist may conduct site inspections at a minimum of once per week to ensure all prescribed avoidance and minimization measures are fully implemented. 4. No endangered/threatened species shall be captured and relocated without express permission from the CDFW and/or USFWS. 5. If at any time during project construction an endangered/threatened species enters the construction site or otherwise may be impacted by the project, all project activities shall cease. A CDFW/USFWS-approved biologist shall document the occurrence and consult with the CDFW and USFWS, as appropriate, to determine whether it was safe for project activities to resume. 6. For all work occurring in areas where endangered/threatened species may be present and are at risk of entering the project site during construction, the applicant shall install exclusion fencing along the project boundaries prior to start of construction (including staging and mobilization). The placement of the fence shall be at the discretion of the CDFW/USFWS-approved biologist. This fence shall consist of solid silt fencing placed at a minimum of three feet above grade and two feet below grade and shall be attached to wooden stakes placed at intervals of not more than five feet. The applicant shall inspect the fence weekly and following rain events and high wind events and shall be maintained in good working condition until all construction activities are complete. 7. All vehicle maintenance/fueling/staging shall occur not less than 100 feet from any riparian habitat or water body, including seasonal wetland features. Suitable containment procedures shall be implemented to	

Impact	Mitigation Measure (s)	Residual Impact
	prevent spills. A minimum of one spill kit shall be available at each work location near riparian habitat or water bodies. 8. No equipment shall be permitted to enter wetted portions of any affected drainage channel or wetland. 9. At the end of each workday, excavations shall be secured with a cover or a ramp provided to prevent wildlife entrapment. 10. All trenches, pipes, culverts, or similar structures shall be inspected for animals prior to burying, capping, moving, or filling. 11. Considering the potential for the project to impact federally and state-listed species and their habitat, the City shall contact CDFW and USFWS to identify mitigation banks within Santa Barbara County during project development. If the results of the project-specific biological analysis (Mitigation Measure BIO-1[a]) determine that impacts to federally and state threatened or endangered species habitat are expected, City and/or applicant shall explore species-appropriate mitigation bank(s) servicing the region for purchase of mitigation credits. 12. Prior to grading and construction in natural areas of containing suitable upland habitat, a qualified biologist shall conduct a preconstruction survey as determined necessary during the biological analysis (Mitigation Measure BIO-1[a]). The survey should include a transect survey over the entire project disturbance footprint (including access and staging areas), and mapping of suitable habitat features, such as burrows, that are potentially suitable for listed species. If any listed species are detected, no work shall be conducted until the individual(s) leaves the site of their own accord, unless federal and/or state "take" authorization has been issued for relocation. Typical preconstruction survey procedures, such as burrow scoping and burrow collapse, cannot be conducted without federal and state permits. If any life stage of listed species are found within the survey area, the City and/or applicant shall consult with the USFWS and CDFW to determine the appropriate course of action to comply with the FESA and CESA, if permits are not already in place at the time of construction. **BIO-1(g) Worker Environmental Awareness Program.** For development facilitated by the plan within undeveloped parcels and prior to construction activities (including staging and mobilization), the City shall require the project proponent to arrange Worker Environmental Awareness Program (WEAP) training for all construction personnel to attend, conducted by a City-approved biologist, to aid workers in recognizing special-status resources that may occur	

Impact	Mitigation Measure (s)	Residual Impact
	in the construction area. The specifics of this program shall include identification of the sensitive species and habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the work area. A fact sheet conveying this information shall also be prepared for distribution to all contractors, their employers, and other personnel involved with construction. All employees shall sign a form provided by the trainer indicating they have attended the WEAP training and understand the information presented to them. The form shall be submitted to the City to document compliance. **BIO-1(h) Northern California Legless Lizard Avoidance and Minimization.** For all development facilitated by the plan in undeveloped areas and if determined necessary based on preliminary review conducted by City staff, a pre-construction clearance survey for Northern California legless lizard shall be conducted by a City-approved qualified biologist within 48 hours prior to the start of construction (including staging and mobilization). The survey shall cover the entire disturbance footprint within suitable habitats with moist loose soil, plus a minimum 100-foot buffer, where permissible, and should identify all special-status wildlife species observed on the project site. During the pre-construction survey the qualified biologist shall inspect under logs, leaf litter, or other suitable refuge. If Northern California legless lizards are identified, individuals shall be relocated by a qualified biologist to suitable cover with loose soils a minimum of 500 feet from the project site, as accessible. A report of the survey results shall be submitted to the City, for review and approval. **BIO-1(i) Roosting Bat Surveys and Avoidance Prior to Removal.** For all development facilitated by the plan that will require the removal of large trees (greater than 20 inches in diameter at five feet from the ground), abandoned buildings, bridges, or other suitable roosting structure identified during a Biological Resources Screening and Assessment prior to tree and/or structure removal, a qualified biologist shall conduct a focused survey of all trees and structures to be removed or impacted by construction activities to determine whether active roosts of special-status bats are present on site. Tree or structure removal shall be planned for either the spring or the fall, and timed to ensure both suitable conditions for the detection of bats and adequate time for tree and/or structure removal to occur during seasonal periods of bat activity exclusive of the breeding season, as described below. Trees and/or structures containing suitable potential bat roost habitat features shall be clearly marked or identified. If no bat roosts are found, the results of the	

Impact	Mitigation Measure (s)	Residual Impact
	survey will be documented and submitted to the City within 30 days of the survey, after which no further action will be required. If roosts are present, the biologist shall prepare a site-specific roosting bat protection plan to be implemented by the contractor following the City's approval. Additionally, the qualified biologist shall determine compensatory mitigation for temporary or permanent habitat loss due to tree removal, in conjunction with CDFW. The plan shall incorporate the following guidance as appropriate: ▪ When possible, removal of trees/structures identified as suitable roosting habitat shall be conducted during seasonal periods of bat activity, including the following: ▫ Between September 1 and about October 15, or before evening temperatures fall below 45 degrees Fahrenheit and/or more than 0.5 inch of rainfall within 24 hours occurs. ▫ Between March 1 and April 15, or after evening temperatures rise above 45 degrees Fahrenheit and/or no more than 0.5 inch of rainfall within 24 hours occurs. ▪ If a tree/structure must be removed during the breeding season and is identified as potentially containing a colonial maternity roost, then a qualified biologist shall conduct acoustic emergence surveys or implement other appropriate methods to further evaluate if the roost is an active maternity roost. Under the biologist's guidance, the contractor shall implement measures similar to or exceeding the following: ▫ If it is determined that the roost is not an active maternity roost, then the roost may be removed in accordance with the other requirements of this measure. ▫ If it is found that an active maternity roost of a colonial roosting species is present, the roost shall not be disturbed during the breeding season (April 15 to August 31). ▪ Tree removal procedures shall be implemented using a two-step tree removal process. This method is conducted over two consecutive days and works by creating noise and vibration by cutting non-habitat branches and limbs from habitat trees using chainsaws only (no excavators or other heavy machinery) on day one. The noise and vibration disturbance, together with the visible alteration of the tree, is very effective in causing	

Impact	Mitigation Measure (s)	Residual Impact
	bats that emerge nightly to feed to not return to the roost that night. The remainder of the tree is removed on day two. ▪ Prior to the demolition of vacant structures within the project site, a qualified biologist shall conduct a focused habitat assessment of all structures to be demolished. The habitat assessment shall be conducted enough in advance to ensure the commencement of building demolition can be scheduled during seasonal periods of bat activity (see above), if required. If no signs of day roosting activity are observed, no further actions will be required. If bats or signs of day roosting by bats are observed, a qualified biologist will prepare specific recommendations such as partial dismantling to cause bats to abandon the roost, or humane eviction, both to be conducted during seasonal periods of bat activity, if required. ▪ If the qualified biologist determines a roost is used by a large number of bats (large hibernaculum), bat boxes shall be installed near the project site. The number of bat boxes installed will depend on the size of the hibernaculum and shall be determined through consultation with CDFW. If a maternity colony has become established, all construction activities shall be postponed within a 500-foot buffer around the maternity colony until it is determined by a qualified biologist that the young have dispersed. Once it has been determined that the roost is clear of bats, the roost shall be removed immediately. **BIO-1(j) Monarch Butterfly Avoidance and Minimization.** For development facilitated by the plan within undeveloped parcels, prior to construction activities and if determined necessary based on preliminary review conducted by City staff, the City shall require that all construction activities (including equipment staging, grading, and construction) shall be avoided during the monarch butterfly overwintering season between October 15 through March 15, if practicable. In the event construction activities cannot be avoided during the overwintering season, the City shall retain a qualified biologist to conduct a survey for roosting monarch butterflies within seven days prior to initiation of construction activities to determine their presence/absence. If no monarch butterflies are observed during pre-construction surveys, no further actions are necessary. In the event construction pauses for a period of 7 days or more, if construction is planned to restart during the monarch butterfly overwintering season (October 15 through March 15), the City shall retain a qualified biologist to conduct a new survey in accordance with the requirements of this mitigation measure.	

Impact	Mitigation Measure (s)	Residual Impact
	If construction activities occur during the overwintering season and monarch butterflies are present, the qualified biologist shall establish a protective buffer, ranging from 100 to 300 feet from the roosting site in which monarch butterflies are aggregating. The buffer shall be delineated on site by the biologist with flagging or staking visible by construction personnel. The construction contractor shall ensure no construction occurs within the protective buffer, including staging of equipment or stopping or idling in the buffer, during the overwintering season. In the event construction activities, or other use of equipment, is needed to work within the buffer, the qualified biologist shall be present on site to monitor construction activities and determine if the work is disturbing the aggregated butterflies. If the biologist determines the work is disturbing the butterflies, the biologist shall have the authority to stop work within the protective buffer at any time. In addition, due to the regular movement of the butterflies and locations of the aggregations, the biologist shall have the discretion to adjust the protective buffers, as necessary. **BIO-1(k) Pre- Construction Bird Surveys, Avoidance, and Notification.** For all development facilitated by the plan, prior to construction activities and if determined necessary based on preliminary review conducted by City staff, construction activities initiated during the bird nesting season (February 1 – September 15), involving removal of vegetation (e.g. trees and shrubs), abandoned structures, or other nesting bird habitat, a pre-construction nesting bird survey shall be conducted no more than 5 days prior to initiation of ground disturbance and vegetation removal. The nesting bird pre-construction survey shall be conducted on foot and shall include a buffer around the construction site at a distance determined by a qualified biologist, including staging and storage areas. The minimum survey radii surrounding the work area shall be the following: 250 feet for non-raptors and 1,000 feet for raptors. The survey shall be conducted by a qualified biologist familiar with the identification of avian species known to occur in the Santa Maria region. If construction lapses for seven days or longer, the qualified biologist shall conduct another focused survey before project activities are reinitiated. If nests are found, an avoidance buffer shall be determined by the biologist dependent upon the species, the proposed work activity, and existing disturbances associated with land uses outside of the site. The qualified biologist shall observe the active nest to establish a behavioral baseline of the adults and nestlings, if present. The qualified biologist shall continuously monitor the active nests to detect signs of disturbance and behavioral change	

Impact	Mitigation Measure (s)	Residual Impact
	as a result of construction impacts, such as noise, vibration, odors, or worker/equipment motion. If signs of disturbance and behavioral changes are observed, the qualified biologist shall cease work causing those changes and may contact CDFW or USFWS for guidance. The buffer shall be demarcated by the biologist with bright orange construction fencing, flagging, construction lathe, or other means to demarcate the boundary. All construction personnel shall be notified of the buffer zone as an "Ecologically Sensitive Area" and to avoid entering the buffer zone during the nesting season. No ground disturbing activities shall occur within the buffer until the biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Encroachment into the buffer shall occur only at the discretion of the qualified biologist on the basis that the encroachment will not be detrimental to an active nest. A report summarizing the pre-construction survey(s) shall be prepared by a qualified biologist and shall be submitted to the City prior to the commencement of construction activities. Project site plans shall include a statement acknowledging compliance with the federal MBTA and California Fish and Game Code that includes avoidance of active bird nests and identification of Best Management Practices to avoid impacts to active nests, including checking for nests prior to construction activities during February 1 to September 15, and what to do if an active nest is found so that the nest is not inadvertently impacted during grading or construction activities.	
Impact BIO-2. Wetlands within the Plan Area may be affected by Development facilitated by the 2045 General Plan Update. Development projects would be subject to adopted City regulations to minimize impacts to riparian habitat, sensitive natural communities, and wetlands. Compliance with the NPDES Construction General Permit, Santa Maria Municipal Code, proposed policies in the 2045 General Plan Update, and Mitigation Measures BIO-1(a) and BIO-1(d) would ensure potential impacts to riparian habitat, sensitive natural communities, and wetlands would be less than significant with mitigation.	Mitigation Measures BIO-1(a) and BIO-1(d) (listed above) are required.	Less than significant after mitigation

Impact	Mitigation Measure (s)	Residual Impact
Impact BIO-3. Due to the existing level of development, there are no essential wildlife connectivity areas within the plan area. With adherence to the proposed policies of the 2045 General Plan Update and compliance with the Santa Maria Municipal Code, implementation of the 2045 General Plan Update would have a less than significant impact on the movement of native resident or migratory fish or wildlife species within the plan area, or on established native resident or migratory wildlife corridors.	None required	Less than significant
Impact BIO-4. Development facilitated by the 2045 General Plan Update would be required to adhere to the proposed policies of the 2045 General Plan Update and Santa Maria Municipal Code requirements related to protection of trees and biological resources. Therefore, this impact would be less than significant.	None required	Less than significant
Impact BIO-5. Implementation of the 2045 General Plan Update would not conflict with the provision of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. No impact would occur.	None required	No impact
Cultural and Tribal Cultural Resources		
Impact CUL-1. Development facilitated by the 2045 General Plan has the potential to adversely affect previously unidentified historic-period resources. Implementation of applicable 2045 General Plan policies, State and federal regulations, and the Santa Maria Municipal Code would minimize adverse impacts on historical resources. With mitigation, impacts to historic-period resources would be less than significant.	**CUL-1 Historical Built Environment.** If determined necessary based on preliminary review conducted by City staff, applicants for new discretionary development projects that propose to significantly alter or demolish any historic-age features (i.e., structures determined to be over ~~45~~50 years of age based on available City records, such as permitting records) shall be required to submit a historical resources evaluation prepared by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualifications Standards in architectural history or history (36 CFR Part 61). The report shall address areas containing buildings, structures, objects, sites, landscape/site plans, or other features that are ~~45~~50 years of age or older and are proposed to be altered or demolished as a part of the proposed project. The evaluation shall include an intensive-level evaluation in accordance with the guidelines and best practices meeting the State Office of Historic Preservation guidelines. All evaluated properties shall be documented on Department of Parks and Recreation Series 523 Forms. The historical resources evaluation report shall be submitted to the City for review and approval. If historical resources are identified through the survey and evaluation, the relocation, rehabilitation, or alteration of the resource shall be completed	Less than significant after mitigation

Impact	Mitigation Measure (s)	Residual Impact
	consistent with the Secretary of the Interior's Standards for the Treatments of Historic Properties (Standards). Applicants shall submit a report to the City that identifies and specifies the treatment of character-defining features and construction activities, and demonstrates how the project complies with the Standards and avoids the substantial adverse change in the significance of the historical resource as defined by CEQA Guidelines Section 15064.5(b). The report shall be prepared by an architectural historian or historical architect meeting the Professional Qualifications Standards as defined by 36 CFR Part 61 and provided to the City for review and concurrence prior to project approval.	
Impact CUL-2. Development facilitated by the 2045 General Plan Update has the potential to disturb or damage archaeological resources. Implementation of applicable 2045 General Plan policies, State and federal regulations, and the Santa Maria Municipal Code would minimize adverse impacts to archaeological resources. With mitigation, impacts to archaeological resources would be less than significant.	**CUL-2(a) Archaeological Resources Assessment**. If determined necessary based on preliminary review conducted by City staff, applicants for new discretionary development projects that involve ground disturbance activities (that may include but are not limited to, pavement removal, potholing, grubbing, tree removal, and grading) shall be required to submit to the City an archaeological resources assessment prepared by a qualified archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in either prehistoric or historic archaeology. Assessments shall include a CHRIS records search at the NWIC and a SLF Search from the NAHC. The records searches shall characterize the results of previous cultural resource surveys and disclose any cultural resources that have been recorded and/or evaluated in and around the development site. A qualified archaeologist shall conduct a Phase I pedestrian survey for those projects which include development in archaeologically sensitive areas, as designated by the City, to locate any surface cultural materials. If the Phase I archaeological survey identifies resources that may be affected, the applicant shall also conduct Phase II testing and evaluation. If resources are determined significant or unique through Phase II testing and site avoidance is not possible, the qualified professional shall identify appropriate site-specific mitigation measures in the Phase II evaluation. These measures may include, but would not be limited to, a Phase III data recovery program, avoidance, or other appropriate actions to be determined by a qualified archaeologist. If significant archaeological resources cannot be avoided, impacts may be reduced to less than significant level by filling on top of the sites rather than cutting into the cultural deposits. Alternatively, and/or in addition, a data collection program may be warranted, including mapping the location of artifacts, surface collection of artifacts, or excavation of the cultural deposit, to characterize the nature of the buried portions of sites. Curation of the excavated artifacts or samples would occur as specified by the archaeologist.	Less than significant after mitigation

Impact	Mitigation Measure (s)	Residual Impact
	The City shall review and approve the archaeological resources assessment prior to project approval. **CUL-2(b) Unanticipated Discoveries**. For new development projects where a Phase I archaeological survey identifies archaeological resources that may be affected, project applicants shall be required to retain a qualified cultural resource specialist to monitor construction activities that involve ground-disturbing activities within 60 feet of a potentially significant cultural resource. If archaeological resources are encountered during ground-disturbing activities, work in the immediate area shall halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find. If determined to be necessary by the qualified archaeologist, the evaluation may require preparation of a treatment plan and archaeological testing for CRHR eligibility. If the discovery proves to be significant under CEQA and cannot be avoided by the project, additional work, such as excavating the cultural deposit to fully characterize its extent and collecting and curating artifacts, may be determined to be necessary by the qualified archaeologist to mitigate any significant impacts to cultural resources. If archaeological resources of Native American origin are identified during construction, a qualified archaeologist shall consult with the City to begin Native American consultation procedures. Periodic reports of the find and subsequent evaluations shall be submitted to the City during construction. **CUL-2(c) Workers Environmental Awareness Program**. For new development projects where a Phase I archaeological survey identifies archaeological resources that may be affected, project applicants shall ensure a City-approved archaeologist provides a cultural resources awareness training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers. The WEAP shall be conducted prior to any project-related ground disturbing activities in the project area. The WEAP would include relevant information regarding sensitive cultural resources, including applicable regulations, protocols for avoidance, and consequences of violating State laws and regulations. The WEAP shall also describe appropriate avoidance and impact minimization measures for cultural resources that could be located at the project site and would outline what to do and who to contact if any potential cultural resources or tribal cultural resources are encountered.	

Impact	Mitigation Measure (s)	Residual Impact
Impact CUL-3. Ground disturbing activities associated with development facilitated by the 2045 General Plan Update could result in disturbance of human remains. Compliance with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.8 would ensure this potential impact would be less than significant.	None required	Less than significant
Impact CUL-4. Development facilitated by the 2045 General Plan Update has the potential to disturb or damage tribal cultural resources. Implementation of applicable 2045 General Plan policies, State and federal regulations, and the Santa Maria Municipal Code would minimize adverse impacts to tribal cultural resources. With mitigation, impacts to tribal cultural resources would be less than significant.	**CUL-4(a) Workers Environmental Awareness Program.** For any project with the potential to encounter tribal cultural resources as determined through consultation and/or the preparation of archaeological assessments, the project applicant shall be required to invite a City-approved archaeologist to provide a tribal cultural resources awareness training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers. The City would also invite consulting Tribe(s) to provide a tribal cultural resources awareness training program for all personnel involved in project construction, including field consultants and construction workers. The WEAP training shall be conducted prior to any project-related ground disturbing activities in the project area. The WEAP would include relevant information regarding sensitive cultural resources and tribal cultural resources, including applicable regulations, protocols for avoidance, and consequences of violating State laws and regulations. The WEAP will also describe appropriate avoidance and impact minimization measures for tribal cultural resources that could be located at the project site and would outline what to do and who to contact if any potential cultural resources or tribal cultural resources are encountered. The WEAP would emphasize the requirement for confidentiality and culturally appropriate treatment of any discovery of significance to Native Americans and would discuss appropriate behaviors and responsive actions, consistent with local tribal values. **CUL-4(b) Tribal Cultural Monitoring.** For any project with the potential to encounter tribal cultural resources as determined through consultation and/or the preparation of archaeological assessments, the project applicant shall be required to retain a tribal monitor to monitor construction activities that involve ground-disturbing activities that will occur within 60 feet of a potentially significant cultural resource.	Less than significant after mitigation

Impact	Mitigation Measure (s)	Residual Impact
Hydrology and Water Quality		
Impact HYD-1. Development facilitated by the 2045 General Plan Update would result in construction and operational activities which may contribute to soil erosion and degraded water quality. Development facilitated by the plan would be required to adhere to existing NPDES permits and Municipal Code requirements which would minimize the potential for development to degrade water quality. This impact would be less than significant.	None required	Less than significant
Impact HYD-2. Development facilitated by the 2045 General Plan Update would increase the amount of impervious surface area and increase groundwater demand in Santa Maria. Compliance with the Central Coast RWQCB, Municipal Code, and 2045 General Plan Update policies would ensure the proposed Plan would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge. This impact would be less than significant.	None required	Less than significant
Impact HYD-3. Development facilitated by the 2045 General Plan Update would potentially alter the existing drainage pattern on individual project sites throughout the city. Development facilitated by the 2045 General Plan Update would be required to adhere to existing NPDES Permit and Municipal Code requirements which would ensure development would not substantially alter existing drainage patterns. This impact would be less than significant.	None required	Less than significant
Impact HYD-4. Development facilitated by the 2045 General Plan Update may occur in flood hazard areas. Compliance with applicable municipal code requirements and proposed Safety Element policies would ensure development within areas subject to inundation would be sited, designed, and constructed as to not exacerbate risks from release of pollutants from inundation. This impact would be less than significant.	None required	Less than significant

Impact	Mitigation Measure (s)	Residual Impact
Impact HYD-5. There is no sustainable groundwater management plans for the Santa Maria Valley Groundwater Basin; however, development facilitated by the 2045 General Plan Update would be subject to the Basin Plan. Future development facilitated by the plan would not conflict with the Basin Plan as it would be required to adhere to federal, State, and local regulations to minimize water quality impacts in compliance with the Basin Plan. This impact would be less than significant.	None required	Less than significant
Noise		
Impact NOI-1. Development facilitated by the 2045 General Plan Update would result in construction noise that may impact nearby noise-sensitive land uses. The plan would introduce new noise sources and contribute to an increase in long-term operational noise levels within the city limit as well as the annexation area. Implementation of required noise-reduction mitigation, as well as policies and actions in the plan, would minimize disturbance to noise-sensitive land uses. However, there are no feasible mitigation measures that would avoid or fully mitigate for the increase in construction and traffic noise in the plan area. As a result, this would be a significant and unavoidable impact.	**NOI-1 Conditions of Approval to Reduce Construction Noise**. The City of Santa Maria shall review future developments within 500 feet of a sensitive receptor, and where applicable, require construction contractors to implement the following feasible measures as standard conditions of approval. Construction plans submitted to the City shall include construction noise analysis and identify these measures on demolition, grading, and construction plans submitted to the City. The City of Santa Maria Building Division shall verify that grading, demolition, and/or construction plans submitted to the City include these notations prior to issuance of demolition, grading and/or building permits. Project specific environmental documents may adjust recommended noise reduction measures as necessary to respond to site specific conditions. ▪ **Mufflers**. During excavation and grading construction phases, all construction equipment, fixed or mobile, shall be operated with closed engine doors and shall be equipped with properly operating and maintained mufflers consistent with manufacturers' standards. ▪ **Stationary Equipment**. All stationary construction equipment shall be placed so that emitted noise is directed away from the nearest sensitive receptors. ▪ **Equipment Staging Areas**. Equipment staging shall be located in areas that will create the greatest distance feasible between construction-related noise sources and noise-sensitive receptors. ▪ **Smart Back-up Alarms**. Mobile construction equipment shall have smart back-up alarms that automatically adjust the sound level of the alarm in response to ambient noise levels. Alternatively, back-up alarms shall be disabled and replaced with human spotters to ensure safety when mobile construction equipment is moving in the reverse direction in compliance with applicable safety laws and regulations.	Significant and unavoidable

Impact	Mitigation Measure (s)	Residual Impact
	▪ **Electrically-Powered Tools and Facilities**. Electrical power shall be used to run air compressors and similar power tools and to power any temporary structures, such as construction trailers or caretaker facilities, where feasible. ▪ **Noise Disturbance Coordinator**. The project applicant shall designate a "noise disturbance coordinator" responsible for responding to any local complaints about construction noise. The disturbance coordinator shall determine the cause of any noise complaint and shall require that reasonable measures be implemented to correct the problem. A telephone number for the disturbance coordinator and the City shall be posted at the construction site. ▪ **Temporary Noise Barriers**. Erect temporary noise barriers, where feasible, when construction noise is predicted to exceed the acceptable standards (e.g., 80 dBA Leq at residential receptors, schools or other sensitive receptors during the daytime) or when the anticipated construction duration is greater than is typical (e.g., two years or greater). Temporary noise barriers shall be constructed with solid materials (e.g., wood) with a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier. If a sound blanket is used, barriers shall be constructed with solid material with a density of at least 1 pound per square foot with no gaps from the ground to the top of the barrier and be lined on the construction side with acoustical blanket, curtain or equivalent absorptive material rated sound transmission class (STC) 32 or higher.	
Impact NOI-2. Construction activity from buildout of the 2045 General Plan Update would generate groundborne vibration, potentially affecting nearby land uses. Implementation of required mitigation, as well as policies and actions in the plan, would ensure vibration levels would not exceed applicable thresholds for building damage. Therefore, this impact would be less than significant with mitigation.	**NOI-2 Conditions of Approval to Reduce Construction Vibration**. The City of Santa Maria shall review future developments within 500 feet of a sensitive receptor, and where applicable, require construction contractors to implement the following feasible buffers for construction equipment as standard conditions of approval. Construction plans submitted to the City shall include construction vibration analysis and identify the following buffer distances during demolition, grading, and construction plans submitted to the City. The City of Santa Maria Building Division shall verify that grading, demolition, and/or construction plans submitted to the City include these notations prior to issuance of demolition, grading and/or building permits. Project specific environmental documents may adjust recommended noise reduction measures as necessary to respond to site specific conditions. To reduce potential construction vibration impacts, the City of Santa Maria shall require the following:	Less than significant

Impact	Mitigation Measure (s)	Residual Impact
	▪ Prior to the issuance of a building permit for a project requiring pile driving during construction, the project applicant shall prepare a groundborne noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to the following construction activities: 1) within 135 feet of fragile structures such as historical resources; 2) within 100 feet of non-engineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); 3) use of a vibratory roller within 40 feet of fragile historical resources or 25 feet of any other structure; or 4) use of a dozer or other large earthmoving equipment within 20 feet for a fragile historical structure or 15 feet of any other structure. The noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed the City's architectural damage thresholds (e.g., 0.12 in/sec PPV for fragile or historical resources, 0.2 in/sec PPV for non-engineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses such as drilling piles as opposed to pile driving, static rollers as opposed to vibratory rollers, and lower horsepower earthmoving equipment shall be used. If necessary, construction vibration monitoring shall be conducted to ensure the FTA's vibration thresholds are not exceeded.	
Impact NOI-3. Buildout of the 2045 General Plan Update could expose people residing or working in the plan area to excessive noise levels from airport noise. Implementation of policies and actions in the plan would ensure this impact would be less than significant.	None required	Less than significant
Transportation and Traffic		
Impact TRA-1. The 2045 General Plan Update would not conflict with the Connected 2050 RTP/SCS, the Sant Maria Active Transportation Plan, or any other applicable program, plan, ordinance, or policy relevant to the transportation system. This impact would be less than significant.	None required	Less than significant

Impact	Mitigation Measure (s)	Residual Impact
Impact TRA-2. The future (2045) citywide rates of VMT with the 2045 General Plan Update would not meet the 17% VMT reduction target required to be consistent with CEQA Guidelines 15064.3(b). There are no feasible General Plan policies or mitigation measures that could reduce citywide rates of VMT below the VMT reduction target. As a result, this would be a significant and unavoidable impact.	No feasible mitigation is available.	Significant and unavoidable
Impact TRA-3. Development facilitated by the 2045 General Plan Update would comply with State, Santa Maria Fire Department, and City requirements related to transportation design safety and emergency access. With adherence to these requirements, the 2045 General Plan Update would not substantially increase hazards due to a geometric design feature or result in inadequate emergency access, and this impact would be less than significant.	None required	Less than significant
Utilities and Service Systems		
Impact UTIL-1. Development facilitated by the 2045 General Plan Update would increase demand for additional utility infrastructure which may require relocation or construction of utility facilities or services to serve plan buildout beyond existing conditions, specifically within the annexation area. However, development facilitated by the 2045 General Plan Update would be constructed consistent with applicable City code, buildings standards, and engineering standards. Therefore, these impacts would be less than significant.	None required	Less than significant
Impact UTIL-2. The overall growth anticipated by the 2045 General Plan Update would generate additional water demand in Santa Maria that could exceed projected water supplies during some Multiple Dry-Years. With the implementation of existing policies and programs, this impact would be less than significant**.**	None required	Less than significant
Impact UTIL-3. The 2045 General Plan Update would not generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure. New development facilitated by the plan would be required to comply with applicable solid waste reduction statutes and regulations. This impact would be less than significant.	None required	Less than significant

1 Introduction

This Environmental Impact Report (EIR) examines the potential environmental effects of the proposed City of Santa Maria (City) 2045 General Plan Update ("plan"). The environmental review process for the plan, and legal basis for preparing an EIR, are described below.

1.1 Environmental Impact Report Background

1.1.1 Overview of the Plan

State law (Government Code Section 65300) requires that each city and county adopt a comprehensive general plan. Elements of the City's existing General Plan have been updated between 1991 and 2023. The proposed 2045 General Plan Update is a comprehensive effort to update the existing General Plan and responds to current local and regional conditions, as well as changes in State law that may not have been in effect when the General Plan was written. The proposed 2045 General Plan Update has been organized into the following elements: Land Use; Circulation; Safety; Health and Environmental Justice; Conservation and Open Space, Noise, Public Facilities and Services; Recreation and Parks; Economic Development; and Housing Element. The Housing Element was adopted in December 2023. Together, these elements cover all topics required to be included in a General Plan under State law.

The General Plan defines the policy framework by which the City's physical and economic resources are to be managed and used over the next 20 years. City decision-makers will use the General Plan as a blueprint for:

- Choices about the use of land
- Protection of environmental resources
- Conservation and development of housing
- Provision of supporting infrastructure and public and human services
- Protection of people and property from natural and man-made hazards

Through the General Plan, the City informs its stakeholders (residents, property owners, businesses, developers, etc.) of its goals, policies, and standards, and thereby communicates expectations of the public and private sectors for meeting community objectives.

Since the plan serves as a constitution for future development in Santa Maria, any future decisions by the City affecting land use and development must be consistent with the adopted General Plan. An action, program, or project would be considered consistent with the General Plan if, considering all of its aspects, it will further the objectives and policies of the General Plan or not obstruct their attainment.

The plan contains goals, policies, and implementation programs to implement the City's overarching objectives. Goals are statements that provide direction and state the desired end condition. Policies establish basic courses of action to achieve these goals, and directly guide the response of elected and appointed officials to development proposals and related community actions. Implementation programs are specific actions, procedures, standards or techniques that the City must take to help achieve a specified goal or implement an adopted policy.

1.1.2 Purpose and Legal Authority

This EIR has been prepared in accordance with the CEQA Guidelines. In accordance with CEQA Guidelines Section 15121(a) (California Code of Regulations, Title 14, Division 6, Chapter 3), the purpose of an EIR is to:

> Inform public agency decision-makers and the public generally of the significant environmental effects of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project.

This EIR fulfills the requirements for a Program EIR. Although the legally required contents of a Program EIR are the same as those of a Project EIR, Program EIRs are by necessity more conceptual and may contain a more general discussion of impacts, alternatives, and mitigation measures than a Project EIR. As provided in CEQA Guidelines Section 15168, a Program EIR may be prepared on a series of actions that may be characterized as one large project. Use of a Program EIR provides the City (as Lead Agency) with the opportunity to consider broad policy alternatives and program-wide mitigation measures and provides the City with greater flexibility to address environmental issues and/or cumulative impacts on a comprehensive basis. Agencies generally prepare Program EIRs for programs or a series of related actions that are linked geographically, are logical parts of a chain of contemplated events, rules, regulations, or plans that govern the conduct of a continuing program, or are individual activities carried out under the same authority and having generally similar environmental effects that can be mitigated in similar ways. By its nature, a Program EIR considers the broad effects associated with implementing a program (such as a General Plan or Specific Plan) and does not, and is not intended to, examine the specific environmental effects associated with specific projects that may be accommodated by the provisions of General or Specific Plans.

Once a Program EIR has been prepared, subsequent activities within the program must be evaluated to determine what, if any, additional CEQA documentation needs to be prepared. If the Program EIR addresses the program's effects as specifically and comprehensively as possible, many subsequent activities could be found to be within the Program EIR scope and additional environmental documentation may not be required (CEQA Guidelines Section 15168[c]). When a Lead agency relies on a Program EIR for a subsequent activity, it must incorporate applicable mitigation measures and alternatives developed in the Program EIR into the subsequent activities (CEQA Guidelines Section 15168[c][3]). If a subsequent activity would have effects not contemplated or not within the scope of the Program EIR, the Lead Agency must prepare a new Initial Study leading to a Negative Declaration, Mitigated Negative Declaration, or a plan level EIR. In this case, the Program EIR serves a valuable purpose as the first-tier environmental analysis. CEQA Guidelines Section 15168(b) encourage the use of Program EIRs, citing five advantages:

- Provision of a more exhaustive consideration of impacts and alternatives than would be practical in an individual EIR.
- Focus on cumulative impacts that might be slighted in a case-by-case analysis.
- Avoidance of continual reconsideration of recurring policy issues.
- Consideration of broad policy alternatives and programmatic mitigation measures at an early stage when the agency has greater flexibility to deal with them.
- Reduction of paperwork by encouraging the reuse of data (through tiering).

As a wide-ranging environmental document, the Program EIR uses expansive thresholds as compared to the project-level thresholds that might be used for an EIR on a specific development

project. It should not be assumed that impacts determined not to be significant at a program level would not be significant at a project level. In other words, determination that implementation of the plan as a program would not have a significant environmental effect does not necessarily mean that an individual project would not have significant effects based on project-level CEQA thresholds, even if the project is consistent with the plan.

This EIR has been prepared to analyze potentially significant environmental impacts associated with future development resulting from implementation of the plan and provides appropriate and feasible mitigation measures or plan alternatives that would minimize or eliminate these impacts. Additionally, this EIR provides the primary source of environmental information for the City of Santa Maria, which is the Lead Agency, to use when considering approval and implementation of the plan.

This EIR is intended to provide decision-makers and the public with information that enables intelligent consideration of the environmental consequences of the plan. This EIR identifies significant or potentially significant environmental effects, as well as ways in which those impacts could be reduced below applicable thresholds of significance, whether through the imposition of mitigation measures or through the implementation of specific alternatives to the plan. In a practical sense, this EIR functions as a tool for fact-finding, allowing concerned citizens and City staff an opportunity to collectively review and evaluate baseline conditions and plan impacts through a process of full disclosure.

1.2 Scope and Content

In accordance with the CEQA Guidelines, a Notice of Preparation (NOP) of a Draft EIR was circulated to potentially interested parties on February 15, 2025. The NOP, included in Appendix A, indicated that all issues on the City's environmental checklist would be discussed in the EIR. These include:

- Agricultural and Forestry Resources
- Air Quality and Greenhouse Gas Emissions
- Biological Resources
- Cultural and Tribal Cultural Resources
- Hydrology and Water Quality
- Noise
- Transportation and Traffic
- Utilities and Service Systems

This EIR evaluates potential impacts in each of these areas. Impacts regarding the CEQA topics of Aesthetics, Energy, Geology and Soils, Hazards and Hazardous Materials, Land Use and Planning, Mineral Resources, Population and Housing, and Wildfire were determined to not be significant and are analyzed in Section 4.10 of this EIR.

The focus of this EIR is to:

- Review and evaluate potentially significant environmental impacts that could occur as a result of the growth and development envisioned in the plan
- Identify feasible mitigation measures that may reduce or eliminate potentially significant effects associated with the plan
- Disclose any potential growth-inducing and/or cumulative impacts associated with the plan
- Examine a reasonable range of alternative growth scenarios (including growth according to the existing General Plan, reduced growth, and alternative locations within the City for growth) that could feasibly attain the basic objectives of the plan, while eliminating and/or reducing some or all of its potentially significant adverse environmental effects

The City staff circulated a NOP of this EIR from February 15, 2025 through March 17, 2025 and received seven written responses. The responses, included in Appendix A, are addressed, as appropriate, in the analysis contained in the various sections of Chapter 4, *Environmental Impact Analysis*. The City staff also conducted a scoping meeting on February 27, 2025 with three members of the public in attendance. Few comments were made during the meeting, with most focusing on the proposed annexation area. One attendee inquired about the proposed plan's intentionss for Mahoney Ranch. Staff clarified that the plan does not propose changes to Mahoney Ranch. However, concerns were noted regarding potential future development in the area, particularly due to the presence of California tiger salamander (CTS) and other sensitive species. No specific questions were raised regarding the EIR itself. Table 1-1 shows a summary of the written comments. The NOP and written comments are included in Appendix A.

Table 1-1 NOP Comments and EIR Response

Commenter	Issue Area/Issues Raised	Where Addressed in the EIR
Agency Comments		
Santa Barbara County Flood Control & Water Conservation District	Recommends all development of one acre or greater adhere to the City of Santa Maria and County of Santa Barbara Flood Control District's Standard Conditions of Project Plan Approval.	Section 4.5, *Hydrology and Water Quality*
California Department of Fish and Wildlife (CDFW)	Requests the EIR include a discussion pertaining to the direct and indirect biological impacts creation of trails and trail management would have on habitats and special status species.	Section 4.3, *Biological Resources*
	Requests that the EIR analyze impacts to local wildlife movement.	
	Requests that the EIR provide an adequate, complete, and detailed disclosure about the effects the proposed plan would have on the environment	*Executive Summary*
	Requests the EIR include a complete discussion of the purpose and need for, and description of the proposed plan.	Chapter 2, *Project Description*
	Requests the EIR include an alternative analysis that would reduce biological resources impacts	Chapter 6, *Alternatives*
	Requests that the EIR include an adequate biological resource baseline assessment	Section 4.3, *Biological Resources*
	Requests that the EIR provide a thorough discussion of direct and indirect impacts expected to affect biological resources with specific measures to offset such impacts .	
	Recommends the EIR evaluate the plan's potential cumulative impacts on biological resources	
	Recommends specific mitigation to reduce potential impacts to nesting birds as a result of plan implementation	
	Recommends the inclusion of feasible mitigation measures to reduce potential impacts to biological resources in the EIR	
	Recommends the use of compensatory mitigation measures for potentially significant impacts to sensitive and special status plants, animals, and habitats.	

Commenter	Issue Area/Issues Raised	Where Addressed in the EIR
	For proposed mitigation lands, CDFW recommends the use of measures to protect the targeted habitat values in perpetuity.	
	Should the plan result in take of a species designated as endangered or threatened, or a candidate for listing under CESA, CDFW recommends that the plan proponent seek appropriate take authorization under CESA prior to plan implementation.	
	Expresses that CDFW does not support the translocation and transplantation as a primary mitigation strategy for unavoidable impacts to endangered, rare, or threatened plants and animals.	
	Requires that a Scientific Collecting Permit be obtained if there is a plan to capture and relocate wildlife	
	Requires that the plan applicant provide written notification to CDFW for any activities that would occur in streams, rivers, or lakes that would divert or obstruct the natural flow, change the bed, channel, or bank.	
	Strongly discourages development in or conversion of wetlands	
	Recommends the use of a native plant palette	
	Requests that any special status species and natural communities detected during plan surveys be reported through the California Natural Diversity Database	
Santa Barbara County Planning and Development	Requests that the EIR include analysis of the potential impacts to agricultural resources and policy consistency related to the establishment of a greenbelt and urban development buffer policy to preserve prime agricultural land	Section 4.1, *Agricultural Resources*
	Requests that the EIR include analysis of the potential impacts to agricultural resources and policy consistency related to future specific plans	
	Requests that the EIR include analysis of the potential impacts to agricultural resources and policy consistency related to LAFCO's policies encouraging conservation of prime agricultural lands	
	Requests that the EIR include analysis of the potential impacts to agricultural resources and policy consistency related to the premature intrusion of urbanization into a predominantly agricultural or rural area.	
	Requests the EIR analyze indirect impacts to county unincorporated areas including County roadways and any necessary roadway improvements related to the proposed plan.	Section 4.7, *Transportation*
	Requests that the EIR analyze the changes in land use patterns that could result from the 2045 General Plan Update and evaluate the consistency of those changes with adopted state, regional, and local plans and regulations.	Section 4.9, *Effects Found Not to be Significant*
	Requests that the EIR describe potential impacts related to energy usage and conservation, as well as potential inconsistencies with relevant energy reduction and sustainability plans and policies, that could occur from future development enabled under the 2045 General Plan Update	Section 4.9, *Effects Found Not to be Significant*

Commenter	Issue Area/Issues Raised	Where Addressed in the EIR
	Requests that the EIR evaluate (an) alternative(s) with a proposal that does not include annexation; a proposal that does not include new development on prime agricultural land; and a proposed that provides opportunities for housing development and growth through land use changes and increased densities of existing land within urban boundaries	Chapter 6, *Alternatives*
California Department of Conservation	Requests that the EIR discuss the loss or conversion of agricultural land and include the type, amount, and location of farmland conversion; impacts on current and future agricultural operations; cumulative impacts on agricultural land; implementation of any City or County Agricultural Mitigation Plans, Programs, or Policies; proposed mitigation measures; and the plan's compatibility with lands within an agricultural preserve and/or enrolled in a Williamson Act contract	Section 4.1, *Agricultural Resources*
	Requests that the EIR discuss the compatibility of the plan with the contract and local Wiliamson Act program requirements	
	Recommends that the environmental review address mitigation for the loss or conversion of agricultural land and provides mitigation measure examples	
Santa Barbara County Air Pollution Control District	Requests that the EIR analyze the plan's consistency with the District's Ozone Plan	Section 4.2, *Air Quality and Greenhouse Gas Emissions*
	Requests that the EIR should present significance thresholds for ozone precursor emissions (reactive organic compounds [ROC], and oxides of nitrogen [NO_X]) and particulate matter and determine whether the proposed plan will produce emissions in excess of the thresholds.	
	Requests that the EIR include a description and quantification of potential air quality impacts associated with construction activities for the proposed plan. The analysis should consider the fact that multiple construction projects could occur simultaneously in any specific portion of the Plan area and provides examples of mitigation measures.	
	Requests that the EIR examine whether any of the land use designation and zoning changes associated with the proposed plan will result in air quality impacts to sensitive land uses such as residential, childcare facilities, schools, or senior living communities and provides examples of mitigation measures.	
	Recommends that sensitive land uses, such as residential, should not be sited within 500 feet of the highway. If, after consideration of the health concerns and other alternatives, sensitive uses are still planned within 500 feet of a freeway or a high traffic roadway, future development projects should be required to adopt design features to minimize exposure to roadway-related pollutants and mitigate potential impacts to the maximum extent feasible.	This comment is about the 2045 General Plan Update and not the environmental review process.
	Requests the EIR include a discussion of how materials will be removed in compliance with District Rule 1001 – National Emission Standards for Hazardous Air Pollutants (NESHAP) – Asbestos.	Section 4.2, *Air Quality and Greenhouse Gas Emissions*

Commenter	Issue Area/Issues Raised	Where Addressed in the EIR
	Requests that the EIR include a quantification of GHG emissions from all plan sources (direct and indirect), present significance thresholds, and make a determination regarding the significance of impacts. Climate change impacts be mitigated to the extent reasonably possible, regardless of whether they are determined to be significant.	
Native American Heritage Commission	Recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of the proposed plan as early as possible to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources	Section 4.4, *Cultural and Tribal Cultural Resources*
Individual Commenters		
Laurie Temura	Provided comments and edits on the project description	Chapter 2, *Project Description*

Source: Appendix A

The Draft EIR was circulated for a 45-day public review period that began on August 14, 2025 and ended on September 28, 2025. Two public meetings were held to receive comments on the Draft EIR, including a virtual meeting on August 19, 2025 and an in-person meeting at the City of Santa Maria Public Library on August 20, 2025. The City of Santa Maria received nine comment letters on the Draft EIR. Comments on the Draft EIR and responses are provided in Chapter 2 of the Final EIR.

1.3 Lead, Responsible, and Trustee Agencies

The City of Santa Maria is the lead agency under CEQA for this EIR because it has primary discretionary authority to determine whether or how to approve the plan. CEQA Guidelines Section 15381 defines responsible agencies as other public agencies that are responsible for carrying out/implementing a specific component of a plan or for approving a plan that implements the goals and policies of a General Plan. There are no responsible agencies for the plan. Although not responsible agencies under CEQA, several other agencies have review authority over aspects of the plan or approval authority over plans that could potentially be implemented in accordance with various objectives and policies included in the plan. These agencies and their roles are listed below.

- The Santa Barbara Local Agency Formation Commission (LAFCO) has responsibility for approving the annexations to the City that might occur over the life of the plan.
- The California Department of Transportation (Caltrans) has responsibility for approving future improvements to the U.S. Highway 101 and State Route Highway 135.
- The CDFW has responsibility for issuing take permits and streambed alteration agreements for any projects with the potential to affect plant or animal species listed by the State of California as rare, threatened, or endangered or that would disturb waters of the State.
- Any other public agencies which may own land within City boundaries.

Trustee agencies have jurisdiction over certain resources held in trust for the people of California but do not have a legal authority over approving or carrying out the plan. CEQA Guidelines Section 15386 designates four agencies as trustee agencies: CDFW with regards to fish and wildlife, native plants designated as rare or endangered, game refuges, and ecological reserves; the State Lands Commission, with regard to state-owned “sovereign” lands, such as the beds of navigable waters

and State school lands; the California Department of Parks and Recreation, with regard to units of the State park system; and the University of California, with regard to sites within the Natural Land and Water Reserves System. The CDFW, due to the potential for rare or endangered species, is the only trustee agency for the plan.

The California Department of Housing and Community Development has authority over the City's Housing Element. The Housing Element has undergone separate CEQA review and for that reason is not part of the plan being evaluated in this EIR. The Housing Element and Initial Study – Mitigated Negative Declaration were adopted on December 5, 2023.

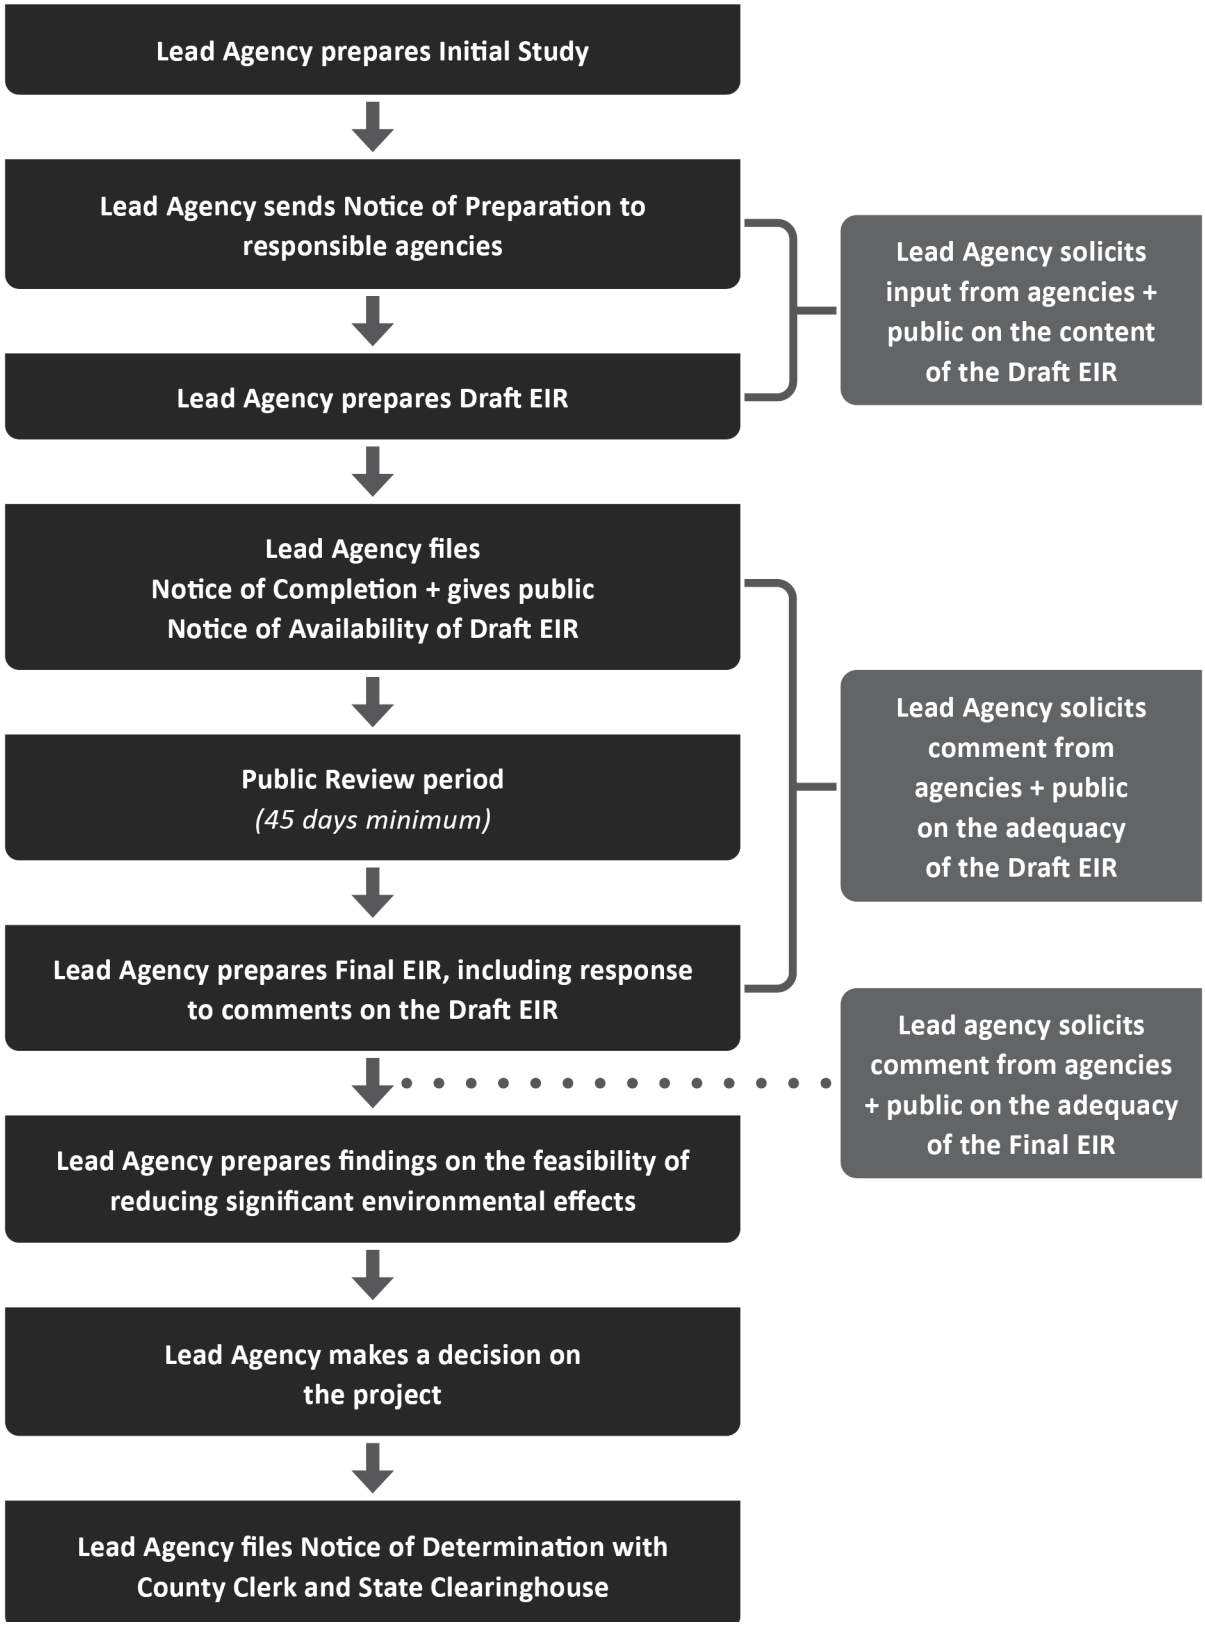
1.4 Environmental Review Process

The environmental impact review process required under CEQA is summarized below and illustrated in Figure 1-1. The steps appear in sequential order.

1. **Notice of Preparation Distributed.** Immediately after deciding that an EIR is required, the lead agency must file a NOP soliciting input on the EIR scope to "responsible," "trustee," and involved federal agencies; to the State Clearinghouse, if one or more state agencies is a responsible or trustee agency; and to parties previously requesting notice in writing. The NOP must be posted in the County Clerk's office for 30 days. A scoping meeting to solicit public input on the issues to be assessed in the EIR is not required but may be conducted by the lead agency. The NOP public comment period for the plan was from February 15 2025 to March 17, 2025 and a scoping meeting was held on February 27, 2025. Public comments were received in response to the NOP and scoping process.
2. **Draft EIR Prepared.** The Draft EIR must contain: a) table of contents or index; b) summary; c) project description; d) environmental setting; e) significant impacts (direct, indirect, cumulative, growth-inducing and unavoidable impacts); f) alternatives; g) mitigation measures; and h) irreversible changes.
3. **Public Notice and Review.** A lead agency must prepare a Public Notice of Availability of an EIR. The Notice must be placed in the County Clerk's office for 30 days (Public Resources Code Section 21092) and sent to anyone requesting it. Additionally, public notice of Draft EIR availability must be given through at least one of the following procedures: a) publication in a newspaper of general circulation; b) posting on and off the plan site; and c) direct mailing to owners and occupants of contiguous properties. The lead agency must consult with and request comments on the Draft EIR from responsible and trustee agencies, and adjacent cities and counties. When a Draft EIR is sent to the State Clearinghouse for review, the public review period must be 45 days, unless a shorter period is approved by the Clearinghouse (Public Resources Code 21091). Distribution of the Draft EIR may be required through the State Clearinghouse. This EIR will be circulated for a 45-day public review and will be sent to the State Clearinghouse.
4. **Notice of Completion.** A lead agency must file a Notice of Completion with the State Clearinghouse as soon as it completes a Draft EIR.
5. **Final EIR.** A Final EIR must include: a) any revisions to the Draft EIR; b) copies of comments received during public review; c) list of persons and entities commenting; and d) responses to comments.

6. **Certification of Final EIR.** The lead agency shall certify that: a) the Final EIR has been completed in compliance with CEQA; b) the Final EIR was presented to the decision-making body of the lead agency; and c) the decision-making body reviewed and considered the information in the Final EIR prior to approving a plan.
7. **Lead Agency Plan Decision.** A lead agency may: a) disapprove a plan because of its significant environmental effects; b) require changes to a plan to reduce or avoid significant environmental effects; or c) approve a plan despite its significant environmental effects, if the proper findings and statement of overriding considerations are adopted.
8. **Findings/Statement of Overriding Considerations.** For each significant impact of the plan identified in the EIR, the lead or responsible agency must find, based on substantial evidence, that: a) the plan has been changed to avoid or substantially reduce the magnitude of the impact; b) changes to the plan are within another agency's jurisdiction and such changes have or should be adopted; or c) specific economic, social, or other considerations make the mitigation measures or plan alternatives infeasible. If an agency approves a plan with unavoidable significant environmental effects, it must prepare a written Statement of Overriding Considerations that set forth the specific social, economic, or other reasons supporting the agency's decision.
9. **Mitigation Monitoring/Reporting Program.** When an agency makes findings on significant effects identified in the EIR, it must adopt a reporting or monitoring program for mitigation measures that were adopted or made conditions of plan approval to mitigate significant effects.
10. **Notice of Determination.** An agency must file a Notice of Determination after deciding to approve a plan for which an EIR is prepared. A local agency must file the Notice with the County Clerk. The Notice must be posted for 30 days and sent to anyone previously requesting notice. Posting of the Notice starts a 30-day statute of limitations on CEQA challenges.

Figure 1-1 Environmental Review Process



2 Plan Description

The plan analyzed in this Environmental Impact Report (EIR) is the City of Santa Maria (City) 2045 General Plan Update, hereafter referred to as the "plan." This chapter of the EIR describes the key characteristics of the plan, including the plan proponent/lead agency, the geographic extent of the plan, plan objectives, required approvals, and the development forecasted by the plan.

2.1 Plan Purpose

The plan is an update to the City's current General Plan, which includes the following chapters: Land Use Element, Circulation Element, Safety Element, Health and Environmental Justice Element, Conservation and Open Space Element, Noise Element, Public Facilities and Services Element, Recreation and Parks Element, and Economic Development Element. The plan establishes the City's vision for future development through the horizon year of 2045. The plan will serve as the City's primary guide for future land use and development decisions in a way that meets the community needs and priorities while serving as a key tool for influencing and improving the quality of life for residents and businesses. As such, it serves as the "blueprint" for future development and conservation of a community. The 2045 General Plan Update, together with the already adopted 6th Cycle Housing Element, will help the City plan for important community issues, such as community growth; housing, mobility, and infrastructure needs; climate change; and environmental protection. It will also set the stage for future social, physical, and economic development of the city.

2.2 Plan Proponent/Lead Agency

The City of Santa Maria is both the plan proponent and the lead agency for the proposed plan. The City's Community Development Department (located at 110 South Pine Street, Suite 101, Santa Maria, California 93458) prepared this EIR with the assistance of Rincon Consultants, Inc. and Raimi + Associates.

2.3 Plan Area Location and Environmental Setting

2.3.1 Regional Location

The City of Santa Maria is located in northern Santa Barbara County, surrounded by the hills of the Santa Maria River Valley (see Figure 2-1). The plan area involves all land within the Santa Maria Sphere of Influence[1] (SOI) and includes the annexation of areas east of the city limits (see Figure 2-2). The City of Santa Maria is generally bound by the Santa Maria River to the north, agricultural lands to the east and west, and the unincorporated town of Orcutt to the south.

[1] The term "sphere of influence" applies to the area designated by the Santa Barbara Local Agency Formation Commission (LAFCO) as the probable, future physical boundary or service area of the city. Overall, planning decisions made for the city are assumed to have a bearing on growth and development in these unincorporated adjacent areas. Areas not included as part of the annexation for the 2045 General Plan will continue to be deferred to the County land use designations and regulations in the SOI. Any development or change that happens in the SOI during the lifetime of the General Plan will occur under the jurisdiction of the County. Therefore, this EIR does not evaluate impacts resulting from future growth within the SOI, outside of the proposed annexation, as part of the proposed plan. However, where relevant, this EIR does evaluate potential impacts resulting from future growth within the city limits to lands within the SOI. The SOI is also included in the cumulative setting for this EIR.

Figure 2-1 Regional Location

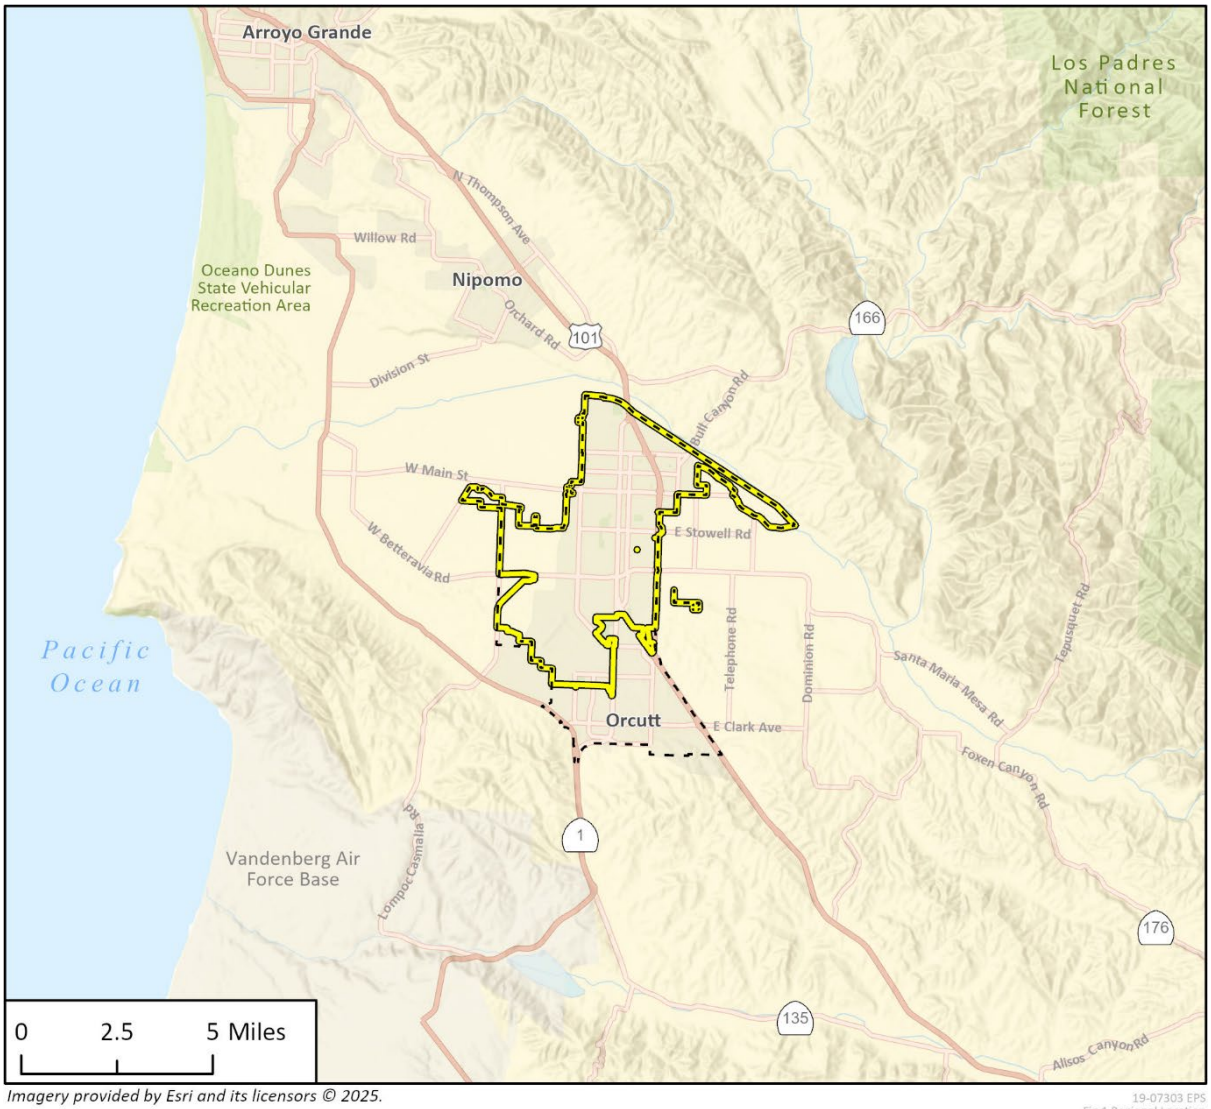


Figure 2-2 Plan Area Location

19-07303 EPS
Fig 2 Project Location

U.S. Highway 101 (U.S. 101) forms the eastern edge of the city. A linear portion of Santa Maria is also located to the ~~west~~ east of U.S. 101. This portion of the city extends south from Prell Road then extends east along an internal farm road. Santa Maria is located approximately 25 miles south of San Luis Obispo, 50 miles northwest of Santa Barbara, 250 miles south of San Francisco and 170 miles north of Los Angeles.

Principal regional transportation facilities serving Santa Maria are U.S. 101, State Route 135 (SR 135), State Route 166 (SR 166), and the Santa Maria Valley Airport. Regional transit is provided by Santa Maria Regional Transit, Clean Air Express, and the San Luis Obispo Regional Transit Authority. Regional rail is provided by Amtrak.

2.3.2 Local Setting

The City of Santa Maria is characterized as a suburban residential community. The plan area covers approximately 15,058 acres within the city limits and approximately 4,500 acres within the SOI (City of Santa Maria 2020). ~~Approximately 27 percent of land within Santa Maria is occupied with residential uses, primarily consisting of single-family residences (22 percent). Agricultural uses occupy 14 percent of the city, airport uses occupy 11 percent, public and institutional uses occupy 11 percent, and commercial uses occupy 7 percent. Approximately 19 percent of the city is comprised of vacant land.~~ Residential land uses are distributed throughout the city. Non-residential land uses, including industrial and commercial, commonly line major corridors in Santa Maria, including Broadway, Main Street, and Betteravia Road. Agricultural and vacant uses are located at the periphery of the city. The city is underlain by the Santa Maria River Valley Groundwater Subbasin. The local climate in Santa Maria is identified as a Mediterranean climate characterized by warm, dry summers and cool, moist winters.

2.3.3 Existing Plan Area Characteristics

The plan area covers approximately 15,058 acres and 4,500 acres within the SOI.. Approximately 110,608 people live within the plan area as of January 2024, resulting in population density of approximately 640 people per square mile. There are 31,412 residential units within the plan area as of 2024 (California Department of Finance 2024).

The annexation area evaluated in the plan (discussed in detail in Section 2.6.3) covers 985 acres east of the City of Santa Maria's limits.

2.4 Regulatory Setting

State law (Government Code Sections 65300 through 65303.4) requires each municipality to adopt and periodically update its General Plan and requires that a General Plan include the following mandatory subject areas, or "elements": Land Use, Circulation, Housing, Open Space, Conservation, Noise, Safety, and Environmental Justice. Municipalities may also prepare optional elements that can be organized or combined at the municipality's discretion.

The plan has been organized into the following elements: Land Use; Circulation; Safety, Health and Environmental Justice; Conservation and Open Space; Noise; Public Facilities and Services; Recreation and Parks Element; and Economic Development. Together with the already adopted 6th Cycle Housing Element, these elements cover all topics required to be included in a General Plan under State law. The City of Santa Maria City Council adopted the 6th Cycle Housing Element on

December 5, 2023. The plan may require additional updates to the adopted Housing Element, although such updates are anticipated to be for consistency with the plan.

Under State law a property's zoning is required to be consistent with its General Plan land use designation (Government Code Section 65860). Section 65860(c) of the Government Code requires that when a General Plan is amended or updated in a way that makes the Zoning Ordinance inconsistent with the General Plan, "the zoning ordinance shall be amended within a reasonable time so that it is consistent with the general plan as amended."

2.5 Plan Objectives

The plan will serve as a long-term framework for future growth and development, represents the community's view of its future, and contains the goals and policies upon with the City Council, Planning Commission, and the entire community will base land use and resource decisions. The plan will provide a contemporary plan that will guide Santa Maria though the next 20 years. The primary objective of this plan is to update the existing Santa Maria General Plan in order for it to be compliant with State law.

The plan would implement the following vision to guide development.

Vision. Santa Maria in 2045 is a community where families can establish and maintain multi-generational roots. It is close-knit, culturally diverse, and economically inclusive. This is possible, in part, because Santa Maria offers affordable, safe, attractive, and healthy homes and neighborhoods for all residents. This is also possible because of the availability of high-quality education, jobs, and economic opportunity. Building from a strong foundation in the agricultural, retail, healthcare, and business services industries, Santa Maria has continued to diversify by expanding the training and skills of residents and by adapting to new technologies and broader economic trends. People are proud of their history and heritage. This is reflected in the diverse, well-preserved historical resources and the attractive, inviting streets and public gathering places. Museums, art venues, a strong civic sector, and the many welcoming community events and celebrations are all evidence of a vibrant local culture. Residents have convenient access on foot and by car, bus, and bicycle to jobs, schools, community amenities like parks and sports fields, and the region's natural environment. Public services are reliable, inclusive, and efficient, and the community is well-served by equitable, modern, and sustainable infrastructure, facilities, and utilities.

The City identifies the following 11 guiding principles, which also serve as the proposed plan objectives for the purposes of complying with CEQA.

- **Agricultural Identity.** Continue to support the agricultural industry and its workforce. Balance the protection of prime agricultural land with the development necessary to support continued population growth and the diversification of the local economy.
- **Culture, History, and Art.** Celebrate and share Santa Maria's multicultural heritage and contemporary diversity. Preserve historic resources, foster the arts, maintain a strong sense of community through cultural festivals, and invite visitors to enjoy the richness of local expression and resources.
- **Community Design.** Create public spaces that reflect the community identity, foster civic pride, and invite community members to gather, both informally and for events. Design streets, buildings, and landscaping that reflect the community's history, culture, and natural environment. Use lighting, street trees, benches, and other amenities to make sidewalks and

public spaces safe and welcoming, with a focus on the Downtown and along the Main and Broadway corridors.

- **Community Health.** Grow and expand physical and mental healthcare services to meet the needs of all residents. Improve community health by addressing the environmental justice priorities of disadvantaged communities, including seniors, low-income households, linguistically isolated families, the homeless, and youth, who comprise 35 percent of residents. Minimize residents' potential for exposure to noise, pesticides, and industrial pollution. Foster healthy lifestyles by expanding safe and attractive options for physical activity and by expanding healthy food access.
- **Natural Environment and Resilience.** Conserve water resources in the city and support efforts to maintain the Santa Maria River. Expand opportunities to enjoy the area's natural resources and the region's beauty. Safeguard the community from natural hazards, including those exacerbated by climate change.
- **Housing Quality and Choice.** Develop a high-quality and diverse housing supply at all levels of affordability that preserves Santa Maria as a place where families can establish roots and today's youth can afford to stay. Balance the growth of housing and the economy so that people can live and work in Santa Maria. As new housing types are introduced, (e.g., accessory dwelling units (ADUs)), adapt parking, transportation, and other community features. Develop workforce housing solutions that provide safe, healthy, and comfortable homes for workers and their families.
- **Resilient Economy.** Cultivate a diverse and resilient economy in which local businesses and families thrive and job growth keeps apace with housing development. Grow the existing economic base in agriculture, retail, healthcare, and business services, and expand into new industries. Ensure access to high quality education that is aligned with local industries and entrepreneurship.
- **Connected Growth.** To accommodate projected population, housing, and jobs growth, focus on improvements to existing neighborhoods along with infill and vacant site development. Expand beyond current city limits when needed, weighing the short and long term environmental, economic, infrastructure, public service, and fiscal trade-offs. Establish strong cultural, design, and physical connections between newly developed areas and the rest of Santa Maria.
- **Transportation Innovations.** Develop a balanced, equitable, affordable, and reliable transportation network where pedestrians, cyclists, trucks, cars, rail, and transit can safely and efficiently navigate to destinations within Santa Maria. Focus on maintaining existing roadways, expanding walking and biking options, and reducing congestion and maintenance costs. Transform corridors and streets from points of conflict among people, cyclists, cars, and trucks into places that bring neighborhoods and families together. Prepare for and expand regional connections with enhanced bus, rail, and air service. Prepare for technological advances like autonomous vehicles and remote work, and take advantage of opportunities and incentives to reduce vehicle miles traveled (VMT) and greenhouse gas (GHG) emissions.
- **Infrastructure, Utilities, Facilities, and Services**. Provide residents and businesses with equitable access to affordable, reliable, and sustainable infrastructure and utilities, including water, wastewater, flood control, gas, phone, cable, and broadband internet. Deliver high-quality services and facilities for all community members, including expedient emergency response, accessible health care, high-quality education and career training, and convenient and equitable access to well-maintained parks and recreational facilities.

- **Governance and Engagement.** Continue to conduct and increase meaningful and inclusive civic engagement that empowers a diversity of perspectives in public decision-making. Provide residents and businesses with high-quality, equitable, and accessible customer service, including City communications and events in multiple languages and interpretation services. Partner with community organizations and institutions to build trust and increase participation, including among youth, who will be the City leaders in 2045.

2.6 Plan Characteristics

2.6.1 2045 General Plan Update Organization

The elements included in the plan are further described in this section.

- **Conservation and Open Space Element.** This element outlines the development, management, and preservation of natural, tribal, cultural, and historic resources within the plan area. Goals, policies, and actions within this element address climate change adaptation and resilience in relation to natural resources, greenhouse gas emissions reduction, urban forestry, and the use of open space for the conservation of natural, cultural, and other resources as well as for hazard mitigation.
- **Safety Element.** This element addresses natural and manmade safety hazards in Santa Maria, including geologic and seismic hazards, fire hazards, flooding, hazardous materials, and emergency response and establishes policies and actions to mitigate hazard impacts to people and property. The Safety Element also evaluates evacuation capacity under a range of hazard scenarios, identifies single-access neighborhoods, and establishes policies and actions to enhance evacuation capacity throughout the city, consistent with Assembly Bill (AB) 747 and Senate Bill (SB) 99. In accordance with SB 379, this element also includes a climate change vulnerability assessment and measures to address climate vulnerabilities and hazard mitigation and emergency response.
- **Land Use.** This element designates the placement and distribution of future development to facilitate orderly growth within the city. This element establishes future land use patterns and specifies appropriate residential density and development intensity. Goals and policies serve as a guide for decision makers to direct the development of the city. Additionally, this element provides an overall design framework for the city with the goal of preserving community character and highlighting community gateways and views.
- **Circulation.** This element provides a framework for the City's multimodal transportation network, addressing the movement of people and goods in and around Santa Maria, while ensuring the orderly improvement of the circulation system in response to the Land Use Element. This element also establishes policies related to the electrification of vehicles and commercial enterprises promoting Mobility as a Service (MaaS), complete streets (AB 1358) and VMT (SB 743).
- **Public Facilities and Services Element.** This element evaluates existing and future conditions related to the provision and maintenance of public buildings and services, including parks, schools, libraries, police, fire, and water, wastewater, and stormwater infrastructure. This element presents goals, policies, and actions related to public facilities and services in order to sustain existing households and businesses and accommodate future growth in population, employment, and development.

- **Recreation and Parks Element.** This element inventories existing park and recreational resources throughout the city and evaluates future conditions and needs related to parks and recreation. Goals, policies, and actions within this element aim to facilitate equitable distribution of resources and investments to meet the recreational needs of all community members.
- **Economic Development Element.** This element includes goals, policies, and actions related to the retention and expansion of existing business sectors, as well as diversifying the economy to develop new kinds of businesses in Santa Maria.
- **Noise Element.** This element identifies and evaluates sources of noise and groundborne vibration and aims to minimize excessive noise exposure and noise conflicts. This element would be consistent with the Santa Maria Public Airport Master Plan and include new noise contours.
- **Health and Environmental Justice Element.** This element identifies disadvantaged communities within the city and includes goals, policies, and actions to reduce pollution exposure, promote access to food, public facilities, and safe housing, and strengthen civic engagement in City planning and decision making.

The City recently updated its Housing Element. The Housing Element provides the City's action plan for meeting the City's 6th Cycle Regional Housing Needs Allocation (RHNA) of 5,418 dwelling units for the 6th Cycle Housing Element (2023 to 2031). The Housing Element has undergone separate CEQA review and for that reason is not part of the plan being evaluated in this EIR. The Housing Element and Initial Study – Mitigated Negative Declaration were adopted on December 5, 2023.

2.6.2 Land Use Designations

The current Santa Maria General Plan Land Use Element establishes 30 separate land use designations to provide a mixture of land uses for the City. The existing City of Santa Maria Land Use Designations Map is shown in Figure 2-3.

The plan would change the land use designation on select parcels, some of which will resolve inconsistencies between existing uses and the General Plan land use designations. In addition, the plan includes the following land use designation changes:

- Revise the High Density Residential (HDR) land use designation to increase the maximum allowed density from 22 dwelling units/acre to 30 dwelling units/acre.
- Eliminate the Medium Density Residential-10 (MDR-10) land use designation and reassign all parcels currently designated MDR-10 to MDR-12, which would have an allowed density of 12 dwelling units/acre.
- Add three new land use designations, Corridor Mixed Use (CMU), Downtown Specific Plan (SP) and Planned Annexation (PA).

Land use changes for the proposed annexation areas east of the city limits (the planned annexation areas) are discussed in detail in Section 2.6.3. Figure 2-4 depicts the proposed land use designations, including the changes in land use designations compared to the current General Plan. Proposed changes from the existing General Plan land use pattern include the following:

- A parcel along North Broadway from Low Density Residential and Community Commercial to Community Facilities (CF);
- Parcels along Main Street from Community Commercial to Corridor Mixed Use (CMU));
- Parcels along Broadway from Community Commercial to Corridor Mixed Use (CMU); and

- Allow Low Density Residential in Area 9 along A Stret in the western portion of the city.

Changes in land use designations within the General Plan would also necessitate revisions to the following Specific Plans:

- Amend the Entrada Specific Plan to reflect the new Corridor Mixed Use land use designation.
- Amend the Area 9 Specific Plan to allow low-medium density residential (LMDR) uses along A Street with a maximum of 10 dwelling units per acre.

2.6.3 Annexation

The plan would include the annexation of areas east of the city limits and SOI. There are three separate areas (shown in Figure 2-5) that would be included as part of the proposed annexation ("annexation area") that would total 985 acres and would consist of the following Assessor's Parcel Numbers (APNs):

128-094-042	128-093-001
128-094-014	128-093-021
128-094-012	128-093-022
128-064-007	128-093-023
128-071-006	128-093-024
128-092-001	128-064-010
128-092-002	128-094-016
128-092-003	128-094-047

The first area proposed for annexation is generally bound by Panther Drive to the west, E. Main Street to the south, and the city landfill parcels to the north and east. The second area proposed for annexation is generally bound by S. Suey Road to the west, E. Main Street to the north, E. Jones Street to the south, and Rosemary Road to the east. The third area proposed for annexation is generally bound by E. Jones Street to the north, U.S. 101 to the west, Prell Road to the south, and the Suey Road alignment to the east. Much of the annexation area is vacant or agricultural land.

Existing zoning and land use designations within the annexation area are determined by the County of Santa Barbara and consist primarily of agricultural land use designations (Agriculture II with a minimum lot size of 100 acres [AG-II-100] and Agriculture II with a minimum lot size of 40 acres [AG-II-40]). Land use changes for the annexation area would include the establishment of a new land use designation, Planned Annexation, which would allow for a mix of commercial, residential, industrial, and public land uses in annexed land outside of current city limits.

2.6.4 Noise Contour Revisions

The City of Santa Maria noise characteristics are described within the plan's Noise Element including descriptions of common sources of noise as well as goals and policies to lessen noise for sensitive land uses (e.g., residences, schools, medical facilities). As required pursuant to the Governor's Office of Planning and Research (OPR) Guidelines, the Noise Element would also include a map of noise contours as depicted via lines that represent equal levels of noise exposure across the city. Noise contours information informs planning decisions, including siting of potential future sensitive land uses. A map of the plan's noise contours is shown in Figure 2-6.

2.6.5 Proposed 2045 General Plan Buildout

For reasonable analysis purposes in this EIR, the City assumes the plan's buildout (of both residential and non-residential uses) within the city would occur by 2045. In the context of this EIR "buildout" of the plan is assumed to be a locally appropriate projection of development within the plan area based on updated land use designations and the proposed annexation rather than development of every parcel within the city. While complete buildout is not likely to occur by 2045, the buildout assumption used for this EIR represents the most conservative approach to evaluating the plan's potential environmental effects and satisfying the requirements of the CEQA Guidelines.

For the purposes of this EIR, "plan area" would refer to the City of Santa Maria, the proposed annexation area, and the Sphere of Influence.

Table 2-1 indicates the net change from 2022 conditions in Santa Maria to buildout of the plan by 2045.

Table 2-1 Existing and Proposed Plan Land Uses Components Summary

	Existing (2022)	Proposed (2045)	Net Change from Existing to Proposed
Acreage within City Limits	15,058 acres	16,043 acres	985 acres
Residential Units	28,200 units	44,340 units	16,140 units
Jobs	43,050 jobs	66,800 jobs	23,750 jobs

The plan would add 985 acres of land to the city limits and would provide the framework for development of up to 16,140 net new[2] primary and accessory dwelling residential units, including the development of 1,300 accessory dwelling units (ADUs), and an additional 23,750 jobs by buildout.

The plan would provide the framework for the development of up to 1,504 net new non-residential acres, with the following composition (numbers in parentheses indicate a reduction in acreage):

- (463) acres of commercial uses
- 452 acres of mixed uses
- 7 acres of Industrial/airport uses
- 33 acres of public and open space
- 1,012 acres of planned future development (specific plan and planned annexation areas)

Currently, approximately 32 percent of the city remains undeveloped. The undeveloped areas of the city are classified as vacant (19 percent) and agricultural (13 percent). The existing General Plan indicates the remaining 9 percent is classified as industrial. Many of the vacant parcels within the city, clustered between Battles Road, Betteravia Road, and U.S. 101 are either already slated for development or are located within a Specific Plan.

Specific land use designations proposed for the plan area are designed to ensure consistency with the updated Housing Element and existing land uses, such as industrial, heavy commercial, or agricultural. These land use changes would allow for increased residential density along Main Street and Broadway, as well as on opportunity sites with a high potential for redevelopment. Areas of the

[2] Net new means the change from City of Santa Maria existing (2024) development to full buildout of the proposed plan (i.e., 2045 General Plan) by 2045; this EIR analyzes the net change in terms of potential physical environmental impacts.

city with the most potential for change are concentrated in Downtown, neighborhoods in the City Core, Main Street and Broadway, Southwest Neighborhoods (northwest, west, and south of the airport), and areas proposed for annexation. The plan serves as the City's long-term development blueprint through 2045, contains goals and policies guiding land use and infrastructure decisions through 2045, and brings the General Plan up to date in response to latest State and regional plans and regulations related to climate-related hazards,[3] emergency evacuation routes and access, water supply, and mobility.

2.7 Intended Use of this EIR

This EIR provides a programmatic environmental review of implementing the plan. Subsequent activities falling under the plan will utilize this EIR to focus the environmental review of these consequent activities and to determine their effects. If a new project is proposed that is not anticipated by the plan, or that may result in project-level environmental effects not addressed in this program-level EIR, the future project would be evaluated as required under CEQA. This EIR is not intended to prohibit consideration of future projects or CEQA analysis of future projects.

2.8 Plan Implementation

Following adoption of the plan by the City Council, all subsequent activities and development within the City would be guided by the goals and policies in the plan. Therefore, the plan provides specific policy guidance for implementation of plan concepts. The City would also need to coordinate with Santa Barbara County, the Santa Barbara Local Agency Formation Commission (LAFCO), and other public agencies to implement policies that affect their respective jurisdictions or would affect the region. Implementing these policies in accordance with new development (residential, commercial, or industrial) would be subject to the City's established review and approval processes, with final review and approval by the appropriate departmental staff, and/or the appointed and elected officials. The principal responsibilities that City officials and staff have for plan implementation are briefly summarized below:

- Updating the City of Santa Maria Zoning Ordinance to achieve consistency with the adopted plan.
- Rezoning properties, as dictated by future development proposals.
- Approval of tentative maps, variances, planned development and conditional use permits, and other land use permits and entitlements.
- Approval of development agreements and issuance of related permits and approvals consistent with the plan.
- Analyzing and planning for public infrastructure such as roadway improvements, other capital improvements, and natural/capital resource preservation and/or restoration.
- Conducting or considering further focused planning studies, as appropriate to future development in the city.

[3] Pursuant to SB 379, which amended California Government Code Section 65302.

2.9 Required Approvals

With recommendations from the City's Planning Commission, the Santa Maria City Council would need to take the following discretionary actions in conjunction with the plan:

- Certification of the Final EIR and adoption of required findings, including required findings under CEQA Guidelines Sections 15090, 15091, and 15093[4]; and
- Approval and adoption of the plan.

[4] Santa Barbara County LAFCO must approve the City's annexation application, which would include certification of this Environmental Impact Report.

3 Environmental Setting

This chapter provides a general overview of the environmental setting for the proposed project. More detailed descriptions of the environmental setting for each environmental issue area can be found in Chapter 4, *Environmental Impact Analysis*.

3.1 Setting

The City of Santa Maria is located in northern Santa Barbara County, surrounded by the hills of the Santa Maria River Valley (see Figure 2-1). The plan area involves all land within the Santa Maria Sphere of Influence[1] (SOI) and includes the proposed annexation of 985-acres east of the City limits. The City of Santa Maria is generally bound by the Santa Maria River to the north, agricultural lands to the east and west, and the unincorporated town of Orcutt to the south.

U.S. Highway 101 (U.S. 101) forms the eastern edge of the city. A linear portion of Santa Maria is also located to the east of U.S.-101. This portion of the city extends south from Prell Road then extends east along an internal farm road. Santa Maria is located approximately 25 miles south of San Luis Obispo, 50 miles northwest of Santa Barbara, 250 miles south of San Francisco and 170 miles north of Los Angeles.

Principal regional transportation facilities serving Santa Maria are U.S. 101, State Route 135 (SR 135), State Route 166 (SR 166), and the Santa Maria Valley Airport. Regional transit is provided by Clean Air Express and the San Luis Obispo Regional Transit Authority. Regional rail is provided by Amtrak.

The City of Santa Maria is characterized as a suburban residential community. The plan area covers approximately 15,058 acres within the City limits and approximately 4,500 acres within the SOI. Approximately 27 percent of land within Santa Maria is occupied with residential uses, primarily consisting of single-family residences (22 percent). Agricultural uses occupy 14 percent of the city, airport uses occupy 11 percent, public and institutional uses occupy 11 percent, and commercial uses occupy 7 percent. Approximately 19 percent of the city is comprised of vacant land. Residential land uses are distributed throughout the city. Non-residential land uses, including industrial and commercial, commonly line major corridors in Santa Maria, including Broadway, Main Street, and Betteravia Road. Agricultural and vacant uses are located at the periphery of the city. The city is underlain by the Santa Maria River Valley Groundwater Subbasin. The local climate in Santa Maria is identified as a Mediterranean climate characterized by warm, dry summers and cool, moist winters.

[1] The term “sphere of influence” applies to the area designated by the Santa Barbara Local Agency Formation Commission (LAFCO) as the probable, future physical boundary or service area of the City. Overall, planning decisions made for the City are assumed to have a bearing on growth and development in these unincorporated adjacent areas. Areas not included as part of the annexation for the 2045 General Plan Update will continue to be deferred to the County land use designations and regulations in the SOI. Any development or change that happens in the SOI during the lifetime of the General Plan will occur under the jurisdiction of the County. Therefore, this EIR does not evaluate impacts resulting from future growth within the SOI, outside of the proposed annexation, as part of the proposed plan. However, where relevant, this EIR does evaluate potential impacts resulting from future growth within the City limits to lands within the SOI. The SOI is also included in the cumulative setting for this EIR.

3.2 EIR Baseline

Section 15125 of the California Environmental Quality Act (CEQA) Guidelines states that an Environmental Impact Report (EIR) "should include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published." Section 15125 states that this approach "normally constitute[s] the baseline physical conditions by which a lead agency determines whether an impact is significant." This EIR evaluates impacts against existing conditions, at the time the notice of preparation was published, which was February 15, 2025. This EIR considers the potential impacts from buildout of the General Plan in 2045, compared to exiting conditions.

3.3 Cumulative Development

CEQA defines cumulative impacts as two or more individual actions that, when considered together, are considerable or will compound other environmental impacts. Cumulative impacts are the changes in the environment that result from the incremental impact of development of the proposed project and other nearby projects. For example, traffic impacts of two nearby projects may be insignificant when analyzed separately but could have a significant impact when analyzed together. Cumulative impact analysis allows an EIR to provide a reasonable forecast of future environmental conditions and can more accurately gauge the effects of a series of projects.

Because the project is a general plan update, cumulative impacts are treated somewhat differently than would be the case for an individual development project. CEQA Guidelines Section 15130 provides the following direction relative to cumulative impact analysis and states that the following elements are necessary for an adequate discussion of environmental impacts:

> A summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program. Any such document shall be referenced and made available to the public at a location specified by the lead agency.

By its nature, a general plan considers cumulative impacts insofar as it considers cumulative development that could occur within the plan area, which refers to the area within the City Limits and annexation areas. For example, the transportation analysis, discussed in Section 4.8 *Transportation,* considers the overall change in vehicle miles travelled (VMT) due to implementing several development projects that would add to the buildout associated with implementing the project. These cumulative VMT calculations are accounted for in the analyses within Sections 4.2 *Air Quality and Greenhouse Gas Emissions*, 4.6 *Noise* and 4.10 *Effects Found Not to be Significant*; therefore, these analyses would also be considered cumulative. Other impacts, such as geologic hazards, are site-specific impacts that are addressed on a project-by-project basis. Additionally, even when two projects occur in close proximity, their individual impacts would not necessarily compound or contribute to a greater cumulative effect. Therefore, the analysis of project impacts in this EIR also constitutes the cumulative analysis.

4 Environmental Impact Analysis

This Chapter discusses the possible environmental effects of the plan for the specific issue areas that were identified through the scoping process as having the potential to experience significant effects. A "significant effect" as defined by the *CEQA Guidelines* Section 15382:

> means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant.

The assessment of each issue area begins with a discussion of the environmental setting related to the issue, which is followed by the impact analysis. In the impact analysis, the first subsection identifies the methodologies used and the "significance thresholds," which are those criteria adopted by the City and other agencies, universally recognized, or developed specifically for this analysis to determine whether potential effects are significant. The next subsection describes each impact of the proposed project, mitigation measures for significant impacts, and the level of significance after mitigation. Each effect under consideration for an issue area is separately listed in bold text with the discussion of the effect and its significance. Each bolded impact statement also contains a statement of the significance determination for the environmental impact as follows:

- **Significant and Unavoidable.** An impact that cannot be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires a Statement of Overriding Considerations to be issued if the project is approved per Section 15093 of the *CEQA Guidelines*.
- **Less than Significant with Mitigation Incorporated.** An impact that can be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires findings under Section 15091 of the *CEQA Guidelines*.
- **Less than Significant.** An impact that may be adverse but does not exceed the threshold levels and does not require mitigation measures. However, mitigation measures that could further lessen the environmental effect may be suggested if readily available and easily achievable.
- **No Impact.** The proposed project would have no effect on environmental conditions or would reduce existing environmental problems or hazards.

Following each environmental impact discussion is a list of mitigation measures (if required) and the residual effects or level of significance remaining after implementation of the measure(s). In cases where the mitigation measure for an impact could have a significant environmental impact in another issue area, this impact is discussed and evaluated as a secondary impact. The impact analysis concludes with a discussion of cumulative effects, which evaluates the impacts associated with the proposed project in conjunction with other planned and pending developments in the area listed in Chapter 3, *Environmental Setting*.

The Executive Summary of this EIR summarizes all impacts and mitigation measures that apply to the proposed project.

This page intentionally left blank.

4.1 Agricultural Resources

This section evaluates impacts on agriculture and forestry resources associated with implementation of the 2045 General Plan Update. Because this Program EIR is a long-term document intended to guide actions up to 2045, this analysis relies on program-level evaluation.

4.1.1 Setting

a. California Agricultural Resources

According to the California Department of Food and Agriculture, over a third of the country's vegetables and two-thirds of the country's fruits and nuts are grown in California. In 2023, California's farms and ranches received $55.4 billion in cash receipts for their output. This represents a 1.4 percent increase in cash receipts compared to 2022. California agricultural exports totaled $23.6 billion in 2022, an increase of 4.4 percent from 2021. Top commodities for export included almonds, dairy and dairy products, pistachios, walnuts, and wine (California Department of Food and Agriculture 2024).

The California Department of Conservation (DOC) develops Important Farmland Maps as part of its Farmland Mapping and Monitoring Program (FMMP) and includes the following definitions for Important Farmland and other non-farmland land uses (DOC 2025a):

1. **Prime Farmland.** Farmland with the best combination of physical and chemical features able to sustain long term agricultural production. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.
2. **Farmland of Statewide Importance.** Farmland similar to Prime Farmland but with minor shortcomings, such as greater slopes or less ability to store soil moisture. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.
3. **Unique Farmland.** Farmland of lesser quality soils used for the production of the state's leading agricultural crops. This land is usually irrigated, but may include non-irrigated orchards or vineyards as found in some climatic zones in California. Land must have been cropped at some time during the four years prior to the mapping date.
4. **Farmland of Local Importance.** Land of importance to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee. In some counties, Confined Animal Agriculture facilities are part of Farmland of Local Importance, but they are shown separately.
5. **Grazing Land.** Land on which the existing vegetation is suited to the grazing of livestock. This category was developed in cooperation with the California Cattlemen's Association, University of California Cooperative Extension, and other groups interested in the extent of grazing activities.
6. **Urban and Built-up Land.** Land occupied by structures with a building density of at least 1 unit to 1.5 acres, or approximately 6 structures to a 10-acre parcel. This land is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, water control structures, and other developed purposes.

7. **Other Land.** Land not included in any other mapping category. Common examples include low density rural developments; brush, timber, wetland, and riparian areas not suitable for livestock grazing; confined livestock, poultry, or aquaculture facilities; strip mines and borrow pits; and water bodies smaller than 40 acres. Vacant and nonagricultural land surrounded on all sides by urban development and greater than 40 acres is mapped as Other Land.

b. Plan Area Agricultural Resources

Table 4.1-1, below, provides the acreage of each farmland type in the plan area and annexation area. As shown therein, the plan area contains approximately 5,116 acres of Important Farmland. Figure 4.1-1, shows the distribution of different Important Farmlands in the plan area. In addition to Important Farmland, the plan area also includes nine acres of Grazing Land which is considered Prime agricultural land by the Local Agency Formation Commission (LAFCO) definition. There are no Williamson Act lands within the city limits but, as shown in Figure 4.1-2, the annexation area includes approximately 212 acres of Williamson Act lands.

It should be noted that the Williamson Act lands in the annexation area are all currently in nonrenewal, which starts a countdown to the expiration of the contract. This includes three contracts that are set to expire in January of 2026 (71AP072), 2027 (85AP008) and 2028 (70AP148). This is typically nine years for standard Williamson Act contracts and nineteen years for Farmland Security Zone contracts, which are a stricter version of the Williamson Act contract that offer greater property tax savings and longer-term protection for farmland (DOC 2025b). During this period, the land remains subject to all the restrictions and benefits of the Williamson Act contract until it fully expires. Nonrenewal allows landowners to eventually transition their land to other uses while still adhering to the contract's terms during the countdown period. At the end of the nonrenewal process, the contract will be terminated and the land will no longer be under contract as Williamson Act land.

Table 4.1-1 Summary of Important Farmland in the Plan Area and Annexation Area

Farmland Designation	City Limits and SOI	Annexation Areas	Total Acreage
Prime Farmland	691	803	1,494
Farmland of Statewide Importance	190	7	197
Unique Farmland	1,745	134	1,879
Farmland of Local Importance	9	–	9
Grazing Land	1537	–	1,537
Total	**4,172**	**944[1]**	**5,116**

[1] The remaining 41 acres within the annexation area are not considered to be prime or unique farmland or farmland of local or statewide importance.

LAFCO and Farmland

In reviewing applications for proposed annexations, LAFCO is required to consider the proposals impact to agriculture, including prime agricultural land as defined in Government Code Section 56064. As described in Section ~~1.5~~ 1.3, *Lead, Responsible, and Trustee Agencies*, LAFCO is a Responsible Agency under the California Environmental Quality Act (CEQA). Federal, State, and local agencies, including Santa Barbara LAFCO, all operate under different laws and requirements, each setting out different definitions of prime farmland. The definition of agricultural lands and prime agricultural lands differ somewhat from the DOC definitions that are typically relied upon for CEQA analysis.

19-07303 EPS
Fig 4.1-2 Williamson Act in Plan Area

Land that would not qualify as Prime under USDA or FMMP definitions of Prime, may qualify as Prime under the LAFCO definition. For the proposed plan, the only land that this applies to is grazing land which meets the LAFCO definition of Prime agricultural land and is considered as Prime agricultural land within this analysis. As shown on Figure 4.1-1 and in Table 4.1-1, the plan area includes approximately 1,537 acres of grazing lands.

Regional Agriculture

Agriculture is an important part of the economy in Santa Barbara County. In 2023, the total gross value of agricultural crops and products was $1,875,978,000, which represents a 2.8 percent decrease, or $54,467,000, compared to the 2022 value of $1,930,455,000 (County of Santa Barbara 2024).

More specifically, agriculture has been a substantial part of Santa Maria's economy since the early 20th century, with the region's fertile soils and favorable climate supporting a variety of crops. The Santa Maria Valley is particularly known for its strawberries, which are a major contributor to the local economy. Other important crops include wine grapes, broccoli, and cauliflower, which benefit from the region's temperate climate and productive soils.

Regional Farmland Trends

Conversion of farmland is the loss of farmlands due to development or land use changes that do not support agricultural production. The FMMP, which is updated biennially, provides land use conversion information for decision makers to use in their planning for the present and future of California's agricultural land resources.

According to the DOC, irrigated farmland in California showed a net decrease of 56,186 acres between 2016 and 2018, an amount substantially higher than between 2014 and 2016 (11,165 acres). Prime Farmland, the highest quality farmland, decreased by 38,683 net acres, coupled with a Farmland of Statewide Importance decrease of 30,052 net acres. Partially offsetting these losses was the addition of 12,549 net acres of irrigated crops on lesser quality soils (DOC 2019).

Irrigated land conversions due to idling are often associated with water resource limitations, market conditions, and salinity-related land idling. Land was removed from irrigated categories at a rate 19 percent lower than compared with the prior update (128,105 acres between 2014 and 2016 compared to 152,627 acres between 2016 and 2018) (DOC 2019).

Table 4.1-2 shows the number of acres of Important Farmland that have been converted in Santa Barbara County from 2016 to 2018, the most recent and granular data available. As shown, the county lost 2,712 acres of agricultural land and gained 3,789 acres, resulting in a net increase of 1,077 acres.

Table 4.1-2 Farmland Conversion in Santa Barbara County

Farmland Designation	Total Acreage Inventoried 2016	Total Acreage Inventoried 2018	Total Acreage Inventoried Acres Lost (-)	Total Acreage Inventoried Acres Gained (+)	Total Acreage Inventoried Total Acreage Changed	Total Acreage Inventoried Net Acreage Changed	Percent of Inventoried Net Acreage Changed
Prime Farmland	66,979	67,819	955	1,795	2,750	840	+1.2%
Farmland of Statewide Importance	13,194	13,648	151	605	756	454	+3.4%
Unique Farmland	37,324	37,710	715	1,101	1,816	366	+1%
Farmland of Local Importance	8,950	8,347	819	288	1,179	-603	-6.9%
Important Farmland Subtotal	**126,447**	**127,524**	**2,712**	**3,789**	**6,501**	**1,077**	**+0.8%**

c. Forestry Resources

Forest Land, Timberland, Timber Production Zones

Forestry resources include forestland, timberland, and timberland production zones. Definitions used for forestland and timberland are those found in the California Public Resources Code (PRC) Sections 12220(g) and 4789.2(g) and California Government Code (CGC) Section 51104(g). These codes define forestland, timberland, and timberland production zones as follows:

1. **Forest Land** is land that can support, under natural conditions, 10 percent native tree cover of any species, including hardwoods, and that allows for the preservation or management of forest-related resources such as timber, aesthetic value, fish and wildlife, biodiversity, water quality, recreational facilities, and other public benefits (PRC Section 12220[g]).
2. **Timberland** means land, other than land owned by the federal government and land designated by the board as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. Commercial species are determined by the board on a district basis (PRC Section 4526[g]).
3. **Timberland Production Zones** or "TPZ" means an area which has been zoned pursuant to Section 51112 or 51113 and is devoted to and used for growing and harvesting timber, or for growing and harvesting timber and compatible uses, as defined in subdivision (h) (CGC Section 51104).

Within the plan area, there are no official timberland, forest land, or TPZ zoning districts or land use designations. Several locations in the plan area are covered with many trees, including scattered open spaces and parks. However, these concentrations of trees would not be considered forestland or timberland.

4.1.2 Regulatory Setting

Various policies and regulations are enforced at the federal, state, and local level to protect agriculture, forestry, and timberland resources, as outlined below.

a. Federal Regulations

Farmland Protection Policy Act

The Farmland Protection Policy Act is intended to minimize the impact federal programs have on the unnecessary and irreversible conversion of farmland to non-agricultural uses. It assures that to the extent possible federal programs are administered to be compatible with state, local units of government and private programs and policies to protect farmland. Projects are subject to Farmland Protection Policy Act requirements if they may irreversibly convert farmland (directly or indirectly) to nonagricultural use and are completed by a federal agency or with assistance from a federal agency.

b. State Regulations

Farmland Conservation Program Act

The California Farmland Conservancy Program Act, also known as Senate Bill (SB) 1142, established the California Farmland Conservancy Program, which provides grants for agricultural conservation easements. An agricultural conservation easement aims to maintain agricultural land in active production by preventing development on the subject parcel and prohibiting practices that would damage or interfere with the agricultural use of the land. Because the easement is a restriction on the deed of the property, the easement remains in effect even when the land changes ownership. While other benefits may accrue because the land is not developed (scenic and habitat values, for example), the primary use of the land is agricultural. Easements funded by the California Farmland Conservancy Program must be of a size and nature suitable for viable commercial agriculture.

Farmland Mapping and Monitoring Program

The DOC prepares, updates, and maintains Important Farmland Series Maps (Maps) as part of the FMMP and as defined in subdivision (f) of Section 65560 of the Government Code, and prepares and maintains an automated map and database system to record and report changes in the use of agricultural lands every two years on even numbered calendar years. Agricultural land is rated according to soil quality and irrigation status; the best quality land is called Prime Farmland. In preparing FMMP maps, the DOC considers all information collected or received on the amount of land converted to or from agricultural use, and between agricultural categories.

Right to Farm Act 1981

The Right to Farm Act (Civil Code Section 3482.5) is designed to protect commercial agricultural operations from nuisance complaints that may arise when an agricultural operation is conducting business in a "manner consistent with proper and accepted customs." The code specifies that established operations that have been in business for 3 or more years that were not nuisances at the time they began shall not be considered a nuisance as a result of new land use.

Williamson Act

The California Land Conservation Act of 1965, Sections 51200 et seq. of the California Government Code, commonly referred to as the "Williamson Act," enables local governments to restrict the use of specific parcels of land to agricultural or related open space use. Landowners enter into contracts with participating cities and counties and agree to restrict their land to agriculture or open space use for a minimum of 10 years. In return, landowners receive property tax assessments that are much lower than normal because they are based upon farming and open space uses as opposed to full market (speculative) value.

c. Local Regulations

Santa Maria Municipal Code

The Santa Maria Municipal Code includes provisions for agricultural use, specifically outlined in Chapter 12-2.04A. This chapter defines agricultural use as farming or ranching activities, which encompass the cultivation and growing of crops, as well as the raising and keeping of poultry or livestock. These regulations ensure that agricultural activities are conducted in a manner that supports the city's goals for land use and development while maintaining the integrity of agricultural lands.

City of Santa Maria Uniform Rules for Agricultural Preserves

Santa Maria administers its Agricultural Preserve Program under the California Land Conservation Act of 1965, commonly known as the Williamson Act. This program is designed to conserve agricultural and open space lands through uniform rules that govern Williamson Act contracts. The city's Uniform Rules for Agricultural Preserves establish the basic requirements for all contracts, ensuring long-term conservation of agricultural lands and promoting sustainable farming practices (City of Santa Maria 2025).

4.1.3 Impact Analysis

a. Methodology and Significance Thresholds

Methodology

Agricultural and forestry impact assessments involved a review of data available through the Department of Conservation's FMMP and Williamson Act Land maps. An adverse effect would occur if a proposed development would have an impact on existing, mapped agricultural or forest land.

Significance Thresholds

According to Appendix G of the CEQA Guidelines, impacts related to agricultural and forestry resources from implementation of the project would be significant if it would:

1. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use
2. Conflict with existing zoning for agricultural use, or a Williamson Act contract

3. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))
4. Result in the loss of forest land or conversion of forest land to non-forest use
5. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?
Threshold 2:	Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?
Threshold 5:	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Impact AG-1 LAND USE CHANGES IN THE ANNEXATION AREA HAVE THE POTENTIAL TO CONFLICT WITH EXISTING ZONING FOR AGRICULTURE. THERE ARE NO FEASIBLE MITIGATION MEASURES THAT WOULD AVOID OR FULLY MITIGATE FOR THE CONVERSION OF FARMLAND OR AGRICULTURALLY ZONED LANDS. AS A RESULT, THIS WOULD BE A SIGNIFICANT AND UNAVOIDABLE IMPACT.

As noted in Table 4.1-1, the plan area (which includes the annexation area) contains approximately 5,116 acres of Important Farmland. Important Farmland (i.e., Prime Farmland, Farmland of Statewide Importance, and Unique Farmland) is mapped within City limits. There are nine acres of Grazing Land within the plan area which is considered Prime agricultural land by the LAFCO definition.

The plan emphasizes infill development in urbanized portions of the city. Infill development would generally limit agricultural resource impacts, since development would be located within existing urban areas. However, some future development, including development within the annexation area is anticipated in agricultural areas.

The California Department of Conservation currently lists several sites within the city as either Grazing Land, Prime Farmland, or Unique Farmland. However, these sites~~, shown as important farmland in Figure 4.1-3,~~ have previously undergone environmental review for the conversion of agricultural land.

The area west of A street and north of Betteravia Road was evaluated within the Sphere of Influence Expansion Environmental Impact Report (SCH #90010930) in 1994 and the Area 9 Specific Plan Environmental Impact Report (SCH #2008071018) in 2011 wherein impacts to agricultural resources were determined to be less than significant. The Environmental Impact Report for the City's Sphere of Influence Expansion (SCH#90010930) documented the conversion of these agricultural resources to non-agricultural uses, and the City Council Resolution No. 92-136 presented a Statement of Overriding Considerations, which the Council adopted on September 15, 1994. Santa Barbara LAFCO approved annexation of the project area to Santa Maria on November 23, 2004. Furthermore, in

order to mitigate the conversion of these agricultural resources, the City adopted a "Greenbelt and Urban Buffer" resolution in 1994 (Resolution 94- 9). The Greenbelt and Urban Buffer resolution established that the City would preserve agricultural and open space areas immediately adjacent to the City's Urban Boundary Limit. This resolution protects agricultural and open space areas adjacent to the city by prohibiting the city from expanding its Urban Boundary Limit into such areas. As such, the areas immediately adjacent to the Area 9 Specific Plan area would be preserved under this resolution. Because the impacts of the conversion of these agricultural resources on the site were previously offset by the establishment of the City's Greenbelt and Urban Buffer, impacts were found not to be significant (City of Santa Maria 2011). As such, conversion of the area known as Area 9 would not result in a significant impact to agricultural resources. Similarly, the area south of Main Street between Blosser Road and Hanson Way was evaluated within the Sphere of Influence Expansion Environmental Impact Report (SCH #90010930) in 1994. As part of the Sphere of Influence Expansion project, this area was assigned urban growth potentials as part of the West Main Specific Plan and did not include area identified for future agricultural use. Conversion of this area would not result in significant impacts as the area has been previously evaluated and slated for urban growth in previous environmental analyses.

The area east of South Blosser Road, south of West Stowell Road, and north of Battles Road was evaluated within the Blosser-Southeast Specific Plan Amendment Supplemental Environmental Impact Report (SCH #1994107909) in 2020 wherein impacts to agricultural resources were determined to be less than significant. The Supplemental Environmental Impact Report determined that the Blosser-Southeast Specific Plan area has been anticipated for non-agricultural use, including residential development, since the evaluation of the City's Sphere of Influence Boundary Amendment and Concurrent Annexation Program in 1992. As part of the Sphere of Influence Boundary Amendment and Concurrent Annexation Program, this area was assigned residential growth potentials and did not include area identified for future agricultural use. As such, conversion of this area would not result in a significant impact to agricultural resources.

The area east of Blosser Road and south of Battles Road was evaluated within the Betteravia Plaza General Plan Amendment, Land Use and Zone Change and Development Agreement Environmental Impact Report (SCH #2015011029) in 2015. Impacts to agricultural resources within this Environmental Impact Report were determined to be less than significant as this area was identified an infill site located within the urbanized city, surrounded by urban development and is planned and zoned for future urban development. Prior to the preparation of the Betteravia Plaza General Plan Amendment, Land Use and Zone Change and Development Agreement Environmental Impact Report (SCH #2015011029), an Initial Study – Mitigated Negative Declaration was prepared for this area indicating the site had a land use designation of Light Industrial and a zoning designation of Light Manufacturing that has since been changed to allow for retail commercial and professional office uses. As the area has been designated for development and has been previously evaluated in previous environmental documents, impacts related to the conversion of agricultural land would be less than significant.

As such, future development adjacent to agricultural land would not lead to farmland loss due to potential conflicts between existing farming operations and new urban or non-agricultural uses. The 2045 General Plan Update would result in less than significant impacts as it would not result in the conversion of farmland to non—agricultural uses that have not already been evaluated in previous environmental documents and would not result in conflicting uses introduced adjacent to existing farmland.

In addition to Important Farmland, the plan area contains three properties that are under Williamson Act contracts within the central portion of the proposed annexation area. As shown in Figure 4.1-2, these lands are currently in nonrenewal, which starts a countdown to the expiration of the contract. The contracts will expire on January 1, 2026 (71AP072), January 1, 2027 (85AP008), and January 1, 2028 (70AP148). During the non-renewal period, the land remains subject to all the restrictions and benefits of the Williamson Act contract until it fully expires. At the end of the nonrenewal process, the contract will be terminated and the land will no longer be under contract as Williamson Act land. As discussed within Chapter 2, *Project Description*, land use changes for the annexation area would include the establishment of a new land use designation, Planned Annexation, which would allow for a mix of commercial, residential, industrial, and public land uses in annexed land outside of current city limits. This could conflict with the existing Williamson Act contracts. However, as these lands are currently within nonrenewal and are set to expire, it is anticipated that the contracts will have expired by the time of plan buildout thereby reducing the likelihood of a direct conflict at the time of buildout. Further, development facilitated by the plan that would occur within Williamson Act land would be required to undergo individual environmental review at the time a project is proposed for both the proposed project and the annexation of the area. As it is not reasonably foreseeable for new discretionary development in the annexation area to be proposed, reviewed, and approved, between the date of publication of this EIR and the expiration date of the current remaining Williamson Act contracts in the annexation area, development facilitated by the plan would not result in the conversion of Williamson Act Lands. Impacts related to the conversion of Williamson Act lands would be less than significant.

The Conservation and Open Space Element and the Land Use Element of the plan seeks to encourage the continued operation of agricultural lands in and around Santa Maria. The goals and policies listed below from the General Plan address the preservation of agricultural lands:

Goal COS-2: Working lands. Sustainable and productive working lands support healthy local ecosystems.

> **Policy COS-2.1: Agricultural preservation.** Collaborate with Santa Barbara County and local landowners to preserve existing agricultural uses on lands not proposed for future development, including croplands and rangelands.
>
> > **Action COS-2.1.1:** During review of projects that would alter or convert existing agricultural uses, balance state and regional efforts to preserve existing agricultural uses, including the Santa Barbara County Right to Farm Ordinance, clustering of urban land uses/development, and transfer of development rights —with other factors. These include providing adequate housing, achieving a jobs-housing balance, supporting economic sustainability, and advancing other City interests.
> >
> > ~~**Action COS-2.1.2:** To the extent feasible, support the establishment of agricultural conservation easements on land within the City's Sphere of Influence that is zoned for agriculture and designated as Prime Farmland, Farmland of Statewide Importance, and Unique Farmland by initiating discussions with property owners on eligible sites and providing education and technical assistance to interested owners.~~

Goal LU-1: Balanced mix of uses. A balanced mix of land uses meets the present and future housing, employment, and recreation needs of the community.

> **Policy LU-1.2: Infill development.** Prioritize the redevelopment of vacant or underutilized parcels with a focus on ~~infill of existing residential, commercial, and industrial capacity to~~ revitalizinge downtown and deteriorating neighborhoods, to the extent feasible. ~~Accommodate growth while making every effort to preserve agricultural lands and open space.~~

Goal LU-2: Annexation as outward growth. Santa Maria expands in an orderly and efficient manner to accommodate future growth.

> **Policy LU-2.1: Planned Annexation ~~a~~Area.** Expand Sphere of Influence and annex the Planned Annexation ~~a~~Areas identified on the General Plan Land Use Map to meet housing and jobs development goals.

Goal LU-9: Agricultural areas. Thriving agricultural lands generate fresh produce for the State and preserve Santa Maria's history as a farming community.

> **Policy LU-9.1: Agricultural resources.** ~~Accommodate future city growth while making every feasible effort to~~ Preserve agricultural resources in the city on land not proposed for future development, specifically those with State or local importance. Annexation into areas utilized for agriculture shall occur in an orderly and planned manner, consistent with the General Plan and LAFCO policies.
>
> **Policy LU-9.2: Agricultural land use conflicts.** Support ongoing agricultural activities by discouraging land uses that conflict with adjacent farming activities.
>
> **Policy LU-9.3: Agricultural buffers.** Update the Municipal Code to require buffers between new development and lands designated for ~~active~~ agricultural uses. Examples of buffers include but are not limited to roadways, stormwater basins, and landscaped or open space areas.
>
> **Policy LU-9.4: Agricultural land impact avoidance and minimization.** Require projects adjacent to agricultural land to prevent the spread of invasive plant species during construction.

A determination of the impacts to Important Farmland, agricultural zoning and conflicts with Williamson Act contracts would be made on a case-by-case basis as individual projects are proposed. A majority of development facilitated by the plan would likely not create significant impacts, particularly for development that would be located in urbanized areas of the city. However, because implementation of the plan would allow for future conversion of Important Farmland and conflict with agricultural zoning within the annexation area, impacts would be significant and unavoidable.

Mitigation Measures

The 2045 General Plan Update includes policies which are intended to minimize future impacts to agricultural lands in and around Santa Maria. However, there is no set of General Plan policies or mitigation measures that could feasibly reduce the identified impact to agricultural lands in the annexation area.

Significance After Mitigation

Policies included in the 2045 General Plan Update would reduce potential adverse impacts related to the conversion of Important Farmland and Williamson Act contract lands within the annexation area to the extent feasible through preservation efforts and by requiring conservation easements. Nonetheless, even with compliance with General Plan actions, conversion of Important Farmland and conflicts with agricultural zoning could still occur. While these policies would help reduce the extent of farmland conversion and conflicts with agricultural zoning in the annexation area to the extent feasible, it would not be guaranteed that development facilitated by the plan would avoid or fully mitigate for the conversion of Farmland and agriculturally zoned lands within the annexation area. As a result, this impact would remain significant and unavoidable.

Threshold 3:	Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?
Threshold 4:	Would the project result in the loss of forest land or conversion of forest land to non-forest use?

Impact AG-2 THE 2045 GENERAL PLAN UPDATE WOULD NOT CONFLICT WITH EXISTING ZONING FOR FOREST LAND, TIMBERLAND, OR TIMBERLAND PRODUCTION, NOR RESULT IN THE LOSS OF FOREST LAND OR CONVERT FOREST LAND TO NON-FOREST USES. THERE WOULD BE NO IMPACT.

As discussed above in Section 4.1.1(b), there are no zoned TPZs or forest lands within the plan area. Accordingly, the proposed land use pattern would not result in rezoning of any existing forest land or timberlands within the plan area. Because no forest land or timber areas are within the plan area, there would be no impact on conversion of forest land or conflicts with land zoned for forest land, timberland, or timberland production.

Mitigation Measures

No mitigation is required because there would be no impact.

4.1.4 Cumulative Impacts

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (*CEQA Guidelines* Section 15065[a][3]). A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, Environmental Setting, Subsection 3.3, Cumulative Development.

Since the mid-20th century, the Santa Maria region has experienced steady urban expansion resulting in Important Farmland being incrementally converted to residential, commercial, and industrial uses (DOC 2015). This trend has been especially pronounced in areas surrounding Santa

Maria, where population growth and housing demand have led to the conversion of prime farmland. Future development within the cumulative impact analysis area would convert agricultural land to non-agricultural uses and may result in conflicts with agricultural zoning and Williamson Act contracts. In addition, future development adjacent to agricultural land has the potential to result in a loss of farmland due to land use conflicts between existing agricultural activities and new non-agricultural development, which adds to the cumulative conversion of agricultural lands, including areas designated as Important Farmland by the FMMP. Cumulative impacts to agricultural resources would be significant.

As identified in Impact AG-1, the 2045 General Plan Update would result in conversion of agricultural lands to non-agricultural use and could conflict with agricultural zoning in the annexation area. Development facilitated by the plan could result in incompatibilities between new residences and adjacent agricultural uses resulting in the potential conversion of farmland to non-agricultural uses. Implementation of 2045 General Plan policies would reduce the contribution of the plan to cumulative agricultural land impacts. However, these actions would not ensure that the future development facilitated by the plan in the annexation area could feasibly relocate or realign to avoid impacts, and impacts would remain significant and unavoidable. Therefore, cumulative impacts to agricultural resources would be significant, and the 2045 General Plan Update would have a cumulatively considerable contribution on agricultural resource impacts.

Because there is no forestland within the plan area or immediately adjacent areas, future development within the cumulative impact analysis area would not convert forestland to non-forest uses and thus, would not result in conflicts forest zoning. Cumulative impacts to forestland and timber resources would be less than significant.

4.2 Air Quality and Greenhouse Gas Emissions

This section describes current air quality conditions in and around the City of Santa Maria and evaluates the possible impacts related to air quality and greenhouse gas (GHG) emissions that could result from implementation of the 2045 General Plan Update. Information included in this section is based on the policies from the plan, Environmental Background Report (Santa Maria 2020) and the Santa Maria Municipal Code (Santa Maria 2024), as well as transportation VMT data produced by GHD in June 2025.

4.2.1 Setting

a. Air Quality Setting

Climate and Topography

The plan area is part of the South Central Coast Air Basin (SCCAB) that includes all of San Luis Obispo, Santa Barbara, and Ventura counties. The climate of the Santa Barbara County area and all of the SCCAB is strongly influenced by its proximity to the Pacific Ocean and the location of the semi-permanent high-pressure cell in the northeastern Pacific Ocean. The Mediterranean climate of the region produces moderate average temperatures, although slightly more extreme temperatures can be reached in the winter and summer. The proximity of the Pacific Ocean tends to moderate temperature near the coast while the steep mountain ranges produce a significant “orographic effect.” Orographic effect occurs when storms approaching the county from the Pacific Ocean are forced upward against the mountains resulting in increased precipitation release with topographic elevation. The orographic effect, in conjunction with steep, short watersheds occasionally result in flash flooding along the county's south coast.

Santa Barbara County is situated among a series of transverse mountain ranges, the only ranges within the continental United States to trend in an east-westerly direction. Most of the County's developed areas are located along the coastal plain and in the inter-mountain valleys, such as Santa Maria which is located within the Santa Maria Valley. The warmest months of the year in Santa Maria are July through October, with an average maximum temperature of 74 degrees Fahrenheit, while the coldest months of the year are December and January with an average minimum temperature of 39 degrees Fahrenheit. The climate is semi-arid, with rainfall concentrated in the winter months. Table 4.2-1 summarizes local climatic conditions.

Table 4.2-1 Climatic Conditions in Santa Maria

Average annual rainfall	13.9 inches
Average maximum temperature (annual)	74 °F
Average minimum temperature (annual)	39 °F
Warmest month(s)	July through September
Coolest month(s)	December & January

Source: U.S. Climate Data 2023.

Note: Data is based on historic climate in Santa Maria.

Air Pollutants of Primary Concern

The federal and State Clean Air Act (CAA) mandate the control and reduction of certain air pollutants. Under these laws, the United States Environmental Protection Agency (USEPA) and the California Air Resource Board (CARB) have established the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS) for "criteria pollutants" and other pollutants, which are discussed in more detail under Section 4.2.2, Regulatory Setting. Primary criteria pollutants are emitted directly from a source (e.g., vehicle tailpipe, an exhaust stack of a factory, etc.) into the atmosphere and include carbon monoxide (CO), VOC (volatile organic gases)/reactive organic gases (ROG),[1] nitric oxide (NO_X), particulate matter, sulfur dioxide (SO_2), and lead (Pb). Secondary criteria pollutants are created by atmospheric chemical and photochemical reactions primarily between ROG and NO_X. Secondary pollutants include oxidants, ozone (O_3), and sulfate and nitrate particulates (smog). The characteristics, sources and effects of criteria pollutants are discussed in the following subsections.

Ozone

O_3 is a highly oxidative unstable gas produced by a photochemical reaction (triggered by sunlight) between NO_X and ROG. ROG is composed of non-methane hydrocarbons (with specific exclusions), and NO_X is composed of different chemical combinations of nitrogen and oxygen, mainly nitric oxide and nitrogen dioxide (NO_2). NO_X is formed during the combustion of fuels, while ROG is formed during the combustion and evaporation of organic solvents. As a highly reactive molecule, O_3 readily combines with many different atmosphere components. Consequently, high O_3 levels tend to exist only while high ROG and NO_X levels are present to sustain the O_3 formation process. Once the precursors have been depleted, O_3 levels rapidly decline. Because these reactions occur on a regional rather than local scale, O_3 is considered a regional pollutant. In addition, because O_3 requires sunlight to form, it mainly occurs in concentrations considered serious between April and October. People most at risk from O_3 include people with asthma, children, older adults, and people who are active outdoors, especially outdoor workers. In addition, people with reduced intake of certain nutrients, such as vitamins C and E, are at greater risk from O_3 exposure. Depending on the level of exposure, O_3 can cause coughing and a sore or scratch throat; make it more difficult to breathe deeply and vigorously and cause pain when taking a deep breath; inflame and damage the airways; make the lungs more susceptible to infection; aggravate lung diseases such as asthma, emphysema, and chronic bronchitis; and increase the frequency of asthma attacks (USEPA 2025a).

Carbon Monoxide

CO is a localized pollutant found in high concentrations only near its source. The primary source of CO, a colorless, odorless, poisonous gas, is automobile traffic's incomplete combustion of petroleum fuels. Therefore, elevated concentrations are usually only found near areas of high traffic volumes. When CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease. These people already have a reduced ability to get oxygenated blood to their hearts in situations where they need more oxygen than usual. As a result, they are especially vulnerable to the effects of CO when exercising or under increased stress. In these situations, short-

[1] CARB defines VOC and ROG similarly as, "any compound of carbon excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate," with the exception that VOC are compounds that participate in atmospheric photochemical reactions. For the purposes of this analysis, ROG and VOC are considered comparable in terms of mass emissions, and the term ROG is used in this EIR.

term exposure to elevated CO may result in reduced oxygen to the heart accompanied by chest pain, also known as angina (USEPA 2025b).

Nitrogen Dioxide

NO_2 is a by-product of coal, oil, gas or diesel fuel combustion. The primary sources are motor vehicles and industrial boilers, and furnaces. The principal form of NO_x produced by combustion is nitric oxide (NO), but NO reacts rapidly to form NO_2, creating the mixture of NO and NO_2, commonly called NO_x. NO_2 is a reactive, oxidizing gas and an acute irritant capable of damaging cell linings in the respiratory tract. Breathing air with a high concentration of NO_2 can irritate airways in the human respiratory system. Such exposures over short periods can aggravate respiratory diseases leading to respiratory symptoms (such as coughing, wheezing, or difficulty breathing), hospital admissions, and visits to emergency rooms. Longer exposures to elevated concentrations of NO_2 may contribute to the development of asthma and potentially increase susceptibility to respiratory infections. People with asthma and children and the elderly are generally at greater risk for the health effects of NO_2 (USEPA 2025c). NO_2 absorbs blue light and causes a reddish-brown cast to the atmosphere and reduced visibility. It can also contribute to the formation of O_3/smog and acid rain.

Sulfur Dioxide

SO_2 is included in a group of highly reactive gases known as “oxides of sulfur.” The largest sources of SO_2 emissions are from fossil fuel combustion at power plants (73 percent) and other industrial facilities (20 percent). Smaller sources of SO_2 emissions include industrial processes such as extracting metal from ore and burning fuels with a high sulfur content by locomotives, large ships, and off-road equipment. Short-term exposures to SO_2 can harm the human respiratory system and make breathing difficult. People with asthma, particularly children, are sensitive to these effects of SO_2 (USEPA 2025d).

Particulate Matter

Suspended atmospheric PM_{10} (particular matter with diameter of 10 microns or less) and $PM_{2.5}$ (particulate matter with diameter of 2.5 microns or less) are comprised of finely divided solids and liquids such as dust, soot, aerosols, fumes, and mist. Both PM_{10} and $PM_{2.5}$ are emitted into the atmosphere as by-products of coal, gas, or diesel fuel combustion and wind erosion of soil and unpaved roads. The atmosphere, through chemical reactions, can form particulate matter. The characteristics, sources, and potential health effects of PM_{10} and $PM_{2.5}$ can be very different. PM_{10} is generally associated with dust mobilized by wind and vehicles. In contrast, $PM_{2.5}$ is generally associated with combustion processes and formation in the atmosphere as a secondary pollutant through chemical reactions. PM_{10} can cause increased respiratory disease, lung damage, cancer, premature death, reduced visibility, surface soiling. For $PM_{2.5}$, short-term exposures (up to 24-hours duration) have been associated with premature mortality, increased hospital admissions for heart or lung causes, acute and chronic bronchitis, asthma attacks, emergency room visits, respiratory symptoms, and restricted activity days. These adverse health effects have been reported primarily in infants, children, and older adults with preexisting heart or lung diseases (CARB 2025a).

Lead

Pb is a metal found naturally in the environment, as well as in manufacturing products. The major sources of Pb emissions historically have been mobile and industrial. However, due to the USEPA ’s regulatory efforts to remove Pb from gasoline, atmospheric Pb concentrations have declined

substantially over the past several decades. The most dramatic reductions in Pb emissions occurred before 1990 due to the removal of Pb from gasoline sold for most highway vehicles. Pb emissions were further reduced substantially between 1990 and 2008, with reductions occurring in the metals industries at least partly due to national emissions standards for hazardous air pollutants (USEPA 2014). As a result of phasing out leaded gasoline, metal processing is currently the primary source of Pb emissions. The highest Pb level in the air is generally found near Pb smelters. Other stationary sources include waste incinerators, utilities, and Pb-acid battery manufacturers. Pb can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems, and cardiovascular system depending on exposure. Pb exposure also affects the oxygen-carrying capacity of the blood. The Pb effects most likely encountered in current populations are neurological in children. Infants and young children are susceptible to Pb exposures, contributing to behavioral problems, learning deficits, and lowered IQ (USEPA 2025e).

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, Toxic Air Contaminants (TACs) are airborne substances and a diverse group of air pollutants that may cause or contribute to an increase in deaths or serious illness, or that may pose a present or potential hazard to human health. TACs include both organic and inorganic chemical substances that may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities. One of the main sources of TACs in California is diesel engine exhaust that contains solid material known as diesel particulate matter (DPM). More than 90 percent of DPM is less than one micron in diameter (about $1/70^{th}$ the diameter of a human hair) and thus is a subset of $PM_{2.5}$. Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lungs (CARB 2025a).

TACs are different than criteria pollutants because ambient air quality standards have not been established for TACs. TACs occurring at extremely low levels may still cause health effects and it is typically difficult to identify levels of exposure that do not produce adverse health effects. TAC impacts are described by carcinogenic risk and by chronic (i.e., long duration) and acute (i.e., severe but of short duration) adverse effects on human health. People exposed to TACs at sufficient concentrations and durations may have an increased chance of getting cancer or experiencing other serious health effects. These health effects can include damage to the immune system, as well as neurological, reproductive (e.g., reduced fertility), developmental, respiratory, and other health problems (USEPA 2025f).

Air Quality Standards and Attainment

The federal and State governments have authority under the federal and State CAA to regulate emissions of airborne pollutants and have established AAQS for the protection of public health. An air quality standard is defined as "the maximum amount of a pollutant averaged over a specified period of time that can be present in outdoor air without harming public health" (CARB 2025b) The USEPA is the federal agency designated to administer air quality regulation, while CARB is the State equivalent in California. Federal and State AAQS have been established for six criteria pollutants: O_3, CO, NO_2, sulfur dioxide, $PM_{10,}$ $PM_{2.5}$, and lead. AAQS are designed to protect those segments of the public most susceptible to respiratory distress, such as children under the age of 14, the elderly (over the age of 65), persons engaged in strenuous work or exercise, and people with cardiovascular and chronic respiratory diseases (USEPA 2025g). In addition to the federal criteria pollutants, the CAAQS also specify standards for visibility-reducing particles, sulfates, hydrogen sulfide, and vinyl

chloride (CARB 2025c). Table 4.2-2 lists the current NAAQS as well as the CAAQS for regulated pollutants.

Table 4.2-2 Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	NAAQS	CAAQS
Ozone	1-Hour	–	0.09 ppm
	8-Hour	0.070 ppm	0.070 ppm
Carbon Monoxide	8-Hour	9.0 ppm	9.0 ppm
	1-Hour	35.0 ppm	20.0 ppm
Nitrogen Dioxide	Annual	0.053 ppm	0.030 ppm
	1-Hour	0.100 ppm	0.18 ppm
Sulfur Dioxide	Annual	–	–
	24-Hour	–	0.04 ppm
	1-Hour	0.075 ppm	0.25 ppm
PM_{10}	Annual	–	20 µg/m³
	24-Hour	150 µg/m³	50 µg/m³
PM_{25}	Annual	12 µg/m³	12 µg/m³
	24-Hour	35 µg/m³	–
Lead	30-Day Average	–	1.5 µg/m³
	3-Month Average	0.15 µg/m³	–

NAAQS = National Ambient Air Quality Standards; CAAQS = California Ambient Air Quality Standards; ppm = parts per million; µg/m³ = micrograms per cubic meter

Source: USEPA 2025h

USEPA and CARB designate air basins or portions of air basins and counties as being in "attainment" or "nonattainment" for each of the criteria pollutants. Areas that do not meet the AAQS standards are classified as nonattainment areas. Areas that are unclassified have insufficient monitoring data for a specific pollutant to determine attainment or nonattainment status, although unclassified areas are typically treated as attainment for a specific pollutant. Since attainment and nonattainment designation is pollutant-specific, an area may be classified as nonattainment for one pollutant and attainment for another. Similarly, because the State and federal standards differ, an area could be classified as attainment for the federal standards of a pollutant and as nonattainment for the State standards of the same pollutant. The NAAQS (other than O_3, PM_{10}, $PM_{2.5}$, and those based on annual averages or arithmetic mean) are not to be exceeded more than once per year. The NAAQS for O_3, PM_{10}, and $PM_{2.5}$ are based on statistical calculations over one- to three-year periods, depending on the pollutant. The CAAQS are not to be exceeded during a three-year period. The attainment status for Santa Barbara County is included in Table 4.2-3.

Table 4.2-3 Attainment Status of Criteria Pollutants in Santa Barbara County

Pollutant	State Designation	Federal Designation
O_3	Nonattainment-Transitional	Unclassified/Attainment
PM_{10}	Nonattainment	Unclassified/Attainment
$PM_{2.5}$	Attainment	Unclassified/Attainment
CO	Attainment	Unclassified/Attainment
NO_2	Attainment	Unclassified/Attainment
SO_2	Attainment	Unclassified/Attainment

O_3 = Ozone; NO_2 = nitrogen dioxide; CO = carbon monoxide; SO_2 = sulfur dioxide; PM_{10} = particulate matter 10 microns in diameter or less; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter.

Sources: SBCAPCD 2025

The Santa Barbara County Air Pollution Control District (SBAPCD) monitors criteria pollutant levels to assure that air quality standards are met, and if they are not met, develops strategies to meet the standards. As shown in Table 4.2-3, Santa Barbara County is in non-attainment for the 8-hour ozone State standards and PM_{10} State standard (SBAPCD 2025).

More than 250 air quality monitoring stations operated by federal, State, and local agencies comprise the California Ambient Air Monitoring Network, including ten stations in Santa Barbara County (CARB 2025d). There are two existing monitoring stations in Santa Maria: Orcutt Road and 906 South Broadway. The Orcutt Road Station collects data on ozone, $PM_{2.5}$, PM_{10}; and the 906 South Broadway Station collects data on ozone, $PM_{2.5}$, PM_{10}, and NO_2. NO_2 data from the Santa Maria 906 South Broadway Station is only available for 2021, therefore, NO_2 data from the Lompoc-South H Street Station located approximately 27 miles south of the city is used as data from the Lompoc – South H Street Station is available through 2023. The data collected at these stations are generally considered to be representative of the baseline air quality experienced in Santa Maria.

Table 4.2-4 summarizes the annual air quality data for the local airshed. As shown, PM_{10} measurements exceeded the State standards once in 2021, three times in 2022, and ten times in 2023. No other State or federal standards were exceeded at these monitoring stations. Since CO and SO_2 are in attainment with the SCCAB region, these pollutants are not monitored at the nearest air monitoring stations and ambient air quality is not reported for these pollutants.

Table 4.2-4 Ambient Air Quality Data

Pollutant	2021	2022	2023
Ozone (ppm), Worst 1-Hour	0.075[1]	0.057[2]	0.060[2]
Number of days of State exceedances (>0.09 ppm)	0	0	0
Ozone (ppm), 8-Hour Average	0.050[1]	0.054[2]	0.053[2]
Number of days of State exceedances (>0.07 ppm)	0	0	0
Number of days of federal exceedances (>0.07 ppm)	0	0	0
Nitrogen Dioxide (ppm), Highest 1 Hour	25[1]	24[3]	25[3]
Number of days above CAAQS (>0.180 ppm)	0	0	0
Number of days above NAAQS (>0.100 ppm)	0	0	0
Particulate Matter <10 microns, μg/m^3, Worst 24 Hours [2]	56.1[1]	75.6[2]	114.5[2]
Number of days above State standard (>50 μg/m^3) [2]	1	3	10
Number of days above federal standard (>150 μg/m^3)[2]	0	0	0
Particulate Matter <2.5 microns, μg/m^3, Worst 24 Hours [3]	12.4[1]	13.5[2]	26.9[2]
Number of days above federal standard (>35 μg/m^3) [3]	0	0	0

Notes: ppm = parts per million; μg/m^3 = micrograms per cubic meter

Sensitive Receptors

Federal and State AAQS have been established to represent the levels of air quality considered sufficient, with an adequate margin of safety, to protect public health and welfare. They are designed to protect that segment of the public most susceptible to respiratory distress, such as children under 14; the elderly over 65; persons engaged in strenuous work or exercise; and people with cardiovascular and chronic respiratory diseases.

Sensitive receptor locations are therefore typically associated with residences, schools, and hospitals. The Dignity Health – Marian Regional Medical Center is located at 1400 East Church Street in Santa Maria. Additional sensitive receptors in the plan area include residences and K-12 schools located throughout the city. Schools in Santa Maria are identified in Section 4.9, *Effects Found Not to be Significant*.

b. Greenhouse Gas Emissions Setting

Gases that absorb and re-emit infrared radiation in the atmosphere are called GHGs. Gases that are widely seen as the principal contributors to human-induced climate change include carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), fluorinated gases such as hydrofluorocarbons (HFC) and perfluorocarbons (PFC), and sulfur hexafluoride (SF_6). Water vapor is excluded from the list of GHGs, because it is short-lived in the atmosphere, and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation.

Different GHGs have varying global warming potentials (GWP). The GWP of a GHG is the potential of a gas or aerosol to trap heat in the atmosphere over a specified timescale (generally, 100 years). Because GHGs absorb different amounts of heat, a common reference gas (CO_2) is used to relate the amount of heat absorbed to the amount of the gas, referred to as “carbon dioxide equivalent”

(CO_2e), which is the amount of GHG multiplied by its GWP. CO2 has a 100-year GWP of 1. By contrast, methane has a 100-year GWP of 30, meaning its global warming effect is 30 times greater than CO2 on a molecule-per-molecule basis (United Nations Intergovernmental Panel on Climate Change [IPCC] 2021).[2]

GHGs are emitted by natural processes and human activities. Of these gases, CO_2 and CH_4 are emitted in the greatest quantities from human activities. Emissions of CO_2 are usually by-products of fossil fuel combustion, and CH_4 results from off-gassing associated with leakage from natural gas pipelines and processes, agricultural practices and landfills. Human-made GHGs, which have greater heat-absorption potential than CO_2, include fluorinated gases and SF_6 (USEPA 2025h).

Climate change is the observed increase in the average temperature of the Earth's atmosphere, land and oceans along with other substantial changes in climate (such as wind patterns, precipitation, and storms) over an extended period. The term "climate change" is often used interchangeably with the term "global warming," but climate change is preferred, because it conveys that other changes are happening in addition to rising temperatures. The baseline against which these changes are measured originates from historical records that identify temperature changes that occurred in the past, such as during previous ice ages. The global climate is changing continuously, as evidenced in the geologic record, which indicates repeated episodes of substantial warming and cooling. The rate of change has typically been incremental, with warming or cooling trends occurring over the course of thousands of years. The past 10,000 years have been marked by a period of incremental warming, as glaciers have steadily retreated across the globe. However, scientists have observed acceleration in the rate of warming over the past 150 years. The IPCC expressed in their *Sixth Assessment Report* that the rise and continued growth of atmospheric CO_2 concentrations is unequivocally due to human activities (IPCC 2021). Human influence has warmed the atmosphere, ocean, and land and has led the climate to warm at an unprecedented rate in the last 2,000 years. It is estimated that between the period of 1850 through 2019, a total of 2,390 gigatons of anthropogenic CO_2 was emitted. It is likely that anthropogenic activities have increased the global surface temperature by approximately 1.07 degrees Celsius between the years 2010 through 2019 (IPCC 2021).

GHGs in the atmosphere regulate the earth's temperature. Without the natural heat-trapping effect of GHGs, the earth's surface would be approximately 33 degrees Celsius cooler (World Meteorological Organization 2013). However, since 1750, estimated concentrations of CO_2, CH_4, and N_2O in the atmosphere have increased by 47 percent, 156 percent, and 23 percent, respectively, primarily due to human activity (IPCC 2021). GHG emissions from human activities, particularly the consumption of fossil fuels for electricity production and transportation are believed to have elevated the concentration of these gases in the atmosphere far beyond the level of concentrations that occur naturally.

[2] The IPCC's (2021) *Sixth Assessment Report* determined that methane has a GWP of 30. However, the 2017 *Climate Change Scoping Plan* published by CARB uses a GWP of 25 for CH_4, consistent with the IPCC's (2007) *Fourth Assessment Report*. Therefore, this analysis utilizes a GWP of 25.

GHG Emissions Inventory

Global GHG Emissions Inventory

In 2015, worldwide anthropogenic GHG emissions totaled 47,000 million metric tons (MMT) of CO_2e, which is a 43 percent increase from 1990 GHG levels (U.S. EPA 2021b). Specifically, 34,522 MMT of CO_2e of CO_2, 8,241 MMT of CO_2e of CH_4, 2,997 MMT of CO_2e of N_2O, and 1,001 MMT of CO_2e of fluorinated gases were emitted in 2015. The largest source of GHG emissions were energy production and use (includes fuels used by vehicles and buildings), which accounted for 75 percent of the global GHG emissions. Agriculture uses and industrial processes contributed 12 percent and six percent, respectively. Waste sources contributed three percent, and two percent was due to international transportation sources. These sources account for approximately 98 percent because there was a net sink of two percent from land-use change and forestry. (U.S. EPA 2021b).

United States GHG Emissions Inventory

Total U.S. GHG emissions were 6,558 MMT of CO_2e in 2019. Emissions decreased by 1.7 percent from 2018 to 2019; since 1990, total U.S. emissions have increased by an average annual rate of 0.06 percent for a total increase of 1.8 percent between 1990 and 2019. The decrease from 2018 to 2019 reflects the combined influences of several long-term trends, including population changes, economic growth, energy market shifts, technological changes such as improvements in energy efficiency, and decrease in carbon intensity of energy fuel choices. In 2019, the industrial and transportation end-use sectors accounted for 30 percent and 29 percent, respectively, of nationwide GHG emissions while the commercial and residential end-use sectors accounted for 16 percent and 15 percent of nationwide GHG emissions, respectively, with electricity emissions distributed among the various sectors (U.S. EPA 2021c).

California GHG Emissions Inventory

Based on the CARB California Greenhouse Gas Inventory for 2000-2022, California produced 371.1 MMT of CO_2e in 2022, which is 9.3 MMT of CO_2e lower than 2021 levels. The major source of GHG emissions in California is the transportation sector, which comprises 39 percent of the State of California's total GHG emissions. The industrial sector is the second largest source, comprising 23 percent of the State's GHG emissions while electric power accounts for approximately 16 percent (CARB 2025e). The magnitude of California's total GHG emissions is due in part to its large size and large population compared to other states. However, a factor that reduces California's per capita fuel use and GHG emissions as compared to other states is its relatively mild climate. In 2016, the State of California (State) achieved its 2020 GHG emission reduction target of reducing emissions to 1990 levels as emissions fell below 431 MMT of CO_2e (CARB 2021). The annual 2030 statewide target emissions level is 260 MMT of CO_2e (CARB 2017).

Potential Effects of Climate Change

Globally, climate change has the potential to affect numerous environmental resources though potential impacts related to future air temperatures and precipitation patterns. Scientific modeling predicts that continued GHG emissions at or above current rates would induce more extreme climate changes during the 21st century than were observed during the 20th century. The year 2022 was the sixth warmest year since global records began in 1880 at 0.86°C (1.55°F) above the 20th century average of 13.9°C (57.0°F). This value is 0.13°C (0.23°F) less than the record set in 2016 and it is only 0.02°C (0.04°F) higher than the last year's (2021) value, which now ranks as the seventh

highest (National Oceanic and Atmospheric Administration 2023). Furthermore, several independently analyzed data records of global and regional Land-Surface Air Temperature obtained from station observations jointly indicate that Land Surface Air Temperature and sea surface temperatures have increased.

Potential impacts of climate change in California may include reduced water supply from snowpack, sea level rise, more extreme heat days per year, more large forest fires, and more drought years. *California's Fourth Climate Change Assessment* (California Natural Resource Agency 2019) includes regional reports that summarize climate impacts and adaptation solutions for nine regions of the State and regionally specific climate change case studies. However, while there is growing scientific consensus about the possible effects of climate change at a global and Statewide level, current scientific modeling tools are unable to predict what local impacts may occur with a similar degree of accuracy. A summary follows of some of the potential effects that climate change could generate in California.

Air Quality

Scientists project that the annual average maximum daily temperatures in California could rise by 2.4 to 3.2°C in the next 50 years and by 3.1 to 4.9°C in the next century. Higher temperatures are conducive to air pollution formation and rising temperatures could therefore result in worsened air quality in California. As a result, climate change may increase the concentration of ground-level ozone, but the magnitude of the effect, and therefore its indirect effects, are uncertain. In addition, as temperatures have increased in recent years, the area burned by wildfires throughout the State has increased, and wildfires have occurred at higher elevations in the Sierra Nevada Mountains (California Natural Resource Agency 2019). If higher temperatures continue to be accompanied by an increase in the incidence and extent of large wildfires, air quality could worsen. Severe heat accompanied by drier conditions and poor air quality could increase the number of heat-related deaths, illnesses, and asthma attacks throughout the State. With increasing temperatures, shifting weather patterns, longer dry seasons, and more dry fuel loads, the frequency of large wildfires and area burned is expected to increase (California Natural Resources Agency 2021).

Water Supply

Analysis of paleoclimatic data (such as tree-ring reconstructions of stream flow and precipitation) indicates a history of naturally and widely varying hydrologic conditions in California and the west, including a pattern of recurring and extended droughts. Uncertainty remains with respect to the overall impact of climate change on future precipitation trends and water supplies in California. Year-to-year variability in Statewide precipitation levels has increased since 1980, meaning that wet and dry precipitation extremes have become more common (California Department of Water Resources 2018). For example, the winter of 2022-2023 had severe storms and flooding from increased rainfall and snowmelt, which the California Department of Water Resources identified as "the latest example that California's climate is becoming more extreme" (California Department of Wate Resources 2023). This uncertainty regarding future precipitation trends complicates the analysis of future water demand, especially where the relationship between climate change and its potential effect on water demand is not well understood. The average early spring snowpack in the western United States, including the Sierra Nevada Mountains, decreased by about 10 percent during the last century. During the same period, sea level rose over 0.15 meter along the central and southern California coasts. The Sierra snowpack provides most of California's water supply as snow that accumulates during wet winters is released slowly during the dry months of spring and summer. A warmer climate is predicted to reduce the fraction of precipitation that falls as snow and

the amount of snowfall at lower elevations, thereby reducing the total snowpack. Projections indicate that the average spring snowpack in the Sierra Nevada and other mountain catchments in central and northern California will decline by approximately 66 percent from its historical average by 2050 (California Natural Resource Agency 2019).

Hydrology and Sea Level Rise

Climate change could affect the intensity and frequency of storms and flooding (California Natural Resource Agency 2019). Furthermore, climate change could induce substantial sea level rise in the coming century. Rising sea level increases the likelihood of and risk from flooding. The rate of increase of global mean sea levels between 1993 to 2022, observed by satellites, is approximately 3.4 millimeters per year, double the twentieth century trend of 1.6 millimeters per year (World Meteorological Organization 2013; National Aeronautics and Space Administration 2023). Global mean sea levels in 2013 were about 0.23 meter higher than those of 1880 (National Oceanic and Atmospheric Administration 2022). Sea levels are rising faster now than in the previous two millennia, and the rise will probably accelerate, even with robust GHG emission control measures. The most recent IPCC report predicts a mean sea level rise ranging between 0.25 to 1.01 meters by 2100 with the sea level ranges dependent on a low, intermediate, or high GHG emissions scenario (IPCC 2021). A rise in sea levels could erode 31 to 67 percent of southern California beaches and cause flooding of approximately 370 miles of coastal highways during 100-year storm events. This would also jeopardize California's water supply due to saltwater intrusion and induce groundwater flooding and/or exposure of buried infrastructure (California Natural Resource Agency 2019). Furthermore, increased storm intensity and frequency could affect the ability of flood-control facilities, including levees, to handle storm events.

Agriculture

California has an over $51 billion annual agricultural industry that produces over a third of the country's vegetables and three-quarters of the country's fruits and nuts (California Department of Food and Agriculture 2022). Higher CO_2 levels can stimulate plant production and increase plant water-use efficiency. However, if temperatures rise and drier conditions prevail, certain regions of agricultural production could experience water shortages of up to 16 percent, which would increase water demand as hotter conditions lead to the loss of soil moisture. In addition, crop yield could be threatened by water-induced stress and extreme heat waves, and plants may be susceptible to new and changing pest and disease outbreaks (California Natural Resource Agency 2019). Temperature increases could also change the time of year that certain crops, such as wine grapes, bloom or ripen, and thereby affect their quality (California Climate Change Center 2006).

Ecosystems

Climate change and the potential resultant changes in weather patterns could have ecological effects on the global and local scales. Soil moisture is likely to decline in many regions due to higher temperatures, and intense rainstorms are likely to become more frequent. Rising temperatures could have four major impacts on plants and animals: timing of ecological events; geographic distribution and range of species; species composition and the incidence of nonnative species within communities; and ecosystem processes, such as carbon cycling and storage (Parmesan 2006; California Natural Resource Agency 2019).

4.2.2 Regulatory Setting

a. Federal Regulations

Federal Clean Air Act

The U.S. Supreme Court determined in *Massachusetts et al. v. Environmental Protection Agency* et al. ([2007] 549 U.S. 05-1120) that the USEPA has the authority to regulate motor vehicle GHG emissions under the federal Clean Air Act. The USEPA issued a Final Rule for mandatory reporting of GHG emissions in October 2009. This Final Rule applies to fossil fuel suppliers, industrial gas suppliers, direct GHG emitters, and manufacturers of heavy-duty and off-road vehicles and vehicle engines and requires annual reporting of emissions. In 2012, the USEPA issued a Final Rule that established the GHG permitting thresholds that determine when Clean Air Act permits under the New Source Review Prevention of Significant Deterioration and Title V Operating Permit programs are required for new and existing industrial facilities.

In *Utility Air Regulatory Group v. Environmental Protection Agency* (134 Supreme Court 2427 [2014]), the Supreme Court held the USEPA may not treat GHGs as an air pollutant for purposes of determining whether a source can be considered a major source required to obtain a Prevention of Significant Deterioration or Title V permit. The Supreme Court also held that Prevention of Significant Deterioration permits otherwise required based on emissions of other pollutants may continue to require limitations on GHG emissions based on the application of Best Available Control Technology.

Federal Fuel Efficiency Standards (CAFE)

Under the CAA, corporate average fuel economy (CAFE) standards have been set for passenger cars and light trucks. The State of California has traditionally had a waiver to set its own more stringent fuel efficiency standards. In 2020, the NHTSA and USEPA implemented the Safer Affordable Fuel-Efficient Vehicles Rule (SAFE Rule). Part One of the SAFE Rule revoked a waiver granted by USEPA to the State of California to enforce more stringent emission standards for motor vehicles those required by USEPA for the explicit purpose of GHG reduction. However, in 2021 the federal government formally proposed to roll back portions of the SAFE Rule, restoring California's right to enforce more stringent fuel efficiency standards (NHTSA 2022). In December 2021, the NHTSA finalized rules to repeal the SAFE I Rule established in 2020. However, the status of California's fuel efficiency standard waivers are again in question as of the writing of this document.

Construction Equipment Fuel-Efficiency Standard

USEPA sets emission standards for construction equipment. The first federal standards (Tier 1) were adopted in 1994 for all off-road engines over 50 horsepower (hp) and were phased in by 2000. A new standard was adopted in 1998 that introduced Tier 1 for all equipment below 50 hp and established the Tier 2 and Tier 3 standards. The Tier 2 and Tier 3 standards were phased in by 2008 for all equipment. The current iteration of emissions standards for construction equipment are the Tier 4 efficiency requirements, which are contained in 40 CFR Parts 1039, 1065, and 1068 (originally adopted in 69 Federal Register 38958 [June 29, 2004] and most recently updated in 2014 [79 Federal Register 46356]). Emissions requirements for new off-road Tier 4 vehicles were completely phased in by the end of 2015.

b. State Regulations

California Clean Air Act

The CCAA was enacted in 1988 (California Health & Safety Code Section 39000 et seq.). Under the CCAA, the State has developed the CAAQS, which are generally more stringent than the NAAQS. Table 4.2-2 lists the current State standards for regulated pollutants. In addition to the federal criteria pollutants, the CAAQS also specify standards for visibility-reducing particles, sulfates, hydrogen sulfide, and vinyl chloride. Similar to the federal CAA, the CCAA classifies specific geographic areas as either “attainment” or “nonattainment” areas for each pollutant, based on the comparison of measured data within the CAAQS.

California Air Toxics Program

A TAC is an air pollutant that may cause or contribute to an increase in mortality or serious illness, or which may pose a present or potential hazard to human health. TACs may result in long-term health effects such as cancer, birth defects, neurological damage, asthma, or genetic damage, or short-term acute effects such as eye watering, respiratory irritation, runny nose, throat pain, and headaches. TACs are considered either carcinogenic or non-carcinogenic based on the nature of the health effects associated with exposure.

In 1983, the California Legislature enacted a program to identify the health effects of TACs and to reduce exposure to these contaminants to protect the public health (Assembly Bill [AB] 1807: Health and Safety Code Sections 39650–39674). The Legislature established a two-step process to address the potential health effects from TACs. The first step is the risk assessment (or identification) phase. The second step is the risk management (or control) phase of the process.

The California Air Toxics Program establishes the process for the identification and control of TACs and includes provisions to make the public aware of significant toxic exposures and for reducing risk. Additionally, the Air Toxics "Hot Spots" Information and Assessment Act (AB 2588, 1987, Connelly Bill) was enacted in 1987 and requires stationary sources to report the types and quantities of certain substances routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, ascertain health risks, notify nearby residents of significant risks, and reduce those significant risks to acceptable levels. The Children's Environmental Health Protection Act, California Senate Bill (SB) 25 (Chapter 731, Escutia, Statutes of 1999), focuses on children's exposure to air pollutants. The act requires CARB to review its air quality standards from a children's health perspective, evaluate the Statewide air quality monitoring network, and develop any additional air toxic control measures needed to protect children's health.

State Implementation Plan

The SIP is a collection of documents that set forth the State’s strategies for achieving the AAQS. In California, the SIP is a compilation of new and previously submitted plans, programs (such as monitoring, modeling, and permitting), district rules, State regulations, and federal controls. CARB is the lead agency for all purposes related to the SIP under State law. Local air districts and other agencies, such as the Department of Pesticide Regulation and the Bureau of Automotive Repair, prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register. The items included in the California SIP are listed in the Code of Federal Regulations at 40 Code of Federal Regulations 52.220.

The 2022 Santa Barbara County Ozone Plan is the SIP for Santa Barbara County. The 2022 Ozone Plan (2022 Plan) accommodates growth by projecting the growth in emissions based on different indicators. For example, population forecasts adopted by SCCAB are used to forecast population-related emissions. Through the planning process, emissions growth is offset by basin-wide controls on stationary, area, and transportation sources of air pollution.

In addition, the following California Code of Regulations would be applicable to the 2045 General Plan:

- **Engine Idling.** In accordance with Section 2485 of Title 13 of the California Code of Regulations, the idling of all diesel-fueled commercial vehicles (weighing over 10,000 pounds) during construction shall be limited to five minutes at any location.
- **Emission Standards.** In accordance with Section 93115 of Title 17 of the California Code of Regulations, operation of any stationary, diesel-fueled, compression-ignition engines shall meet specified fuel and fuel additive requirements and emission standards.

California Advanced Clean Cars Program

Assembly Bill (AB) 1493 (2002), California's Advanced Clean Cars program (referred to as "Pavley"), requires CARB to develop and adopt regulations to achieve "the maximum feasible and cost-effective reduction of GHG emissions from motor vehicles." On June 30, 2009, the U.S. EPA granted the waiver of Clean Air Act preemption to California for its GHG emission standards for motor vehicles, beginning with the 2009 model year, which allows California to implement more stringent vehicle emission standards than those promulgated by the U.S. EPA. Pavley I regulates model years from 2009 to 2016 and Pavley II, now referred to as "LEV (Low Emission Vehicle) III GHG," regulates model years from 2017 to 2025. The Advanced Clean Cars program coordinates the goals of the LEV, Zero Emissions Vehicles (ZEV), and Clean Fuels Outlet programs and would provide major reductions in GHG emissions. By 2025, the rules have been fully implemented, and new automobiles will emit 34 percent fewer GHGs and 75 percent fewer smog-forming emissions from their model year 2016 levels.

California Global Warming Solutions Act of 2006 (Assembly Bill 32, and Senate Bill 32, and Assembly Bill 1279)

California's major initiative for reducing GHG emissions is outlined in AB 32, the "California Global Warming Solutions Act of 2006," which was signed into law in 2006. AB 32 codifies the statewide goal of reducing GHG emissions to 1990 levels by 2020 and requires CARB to prepare a Scoping Plan that outlines the main State strategies for reducing GHGs to meet the 2020 deadline. AB 32 requires CARB to adopt regulations to require reporting and verification of statewide GHG emissions. Based on this guidance, CARB approved a 1990 statewide GHG level and 2020 limit of 427 MMT CO_2e. The Scoping Plan was approved by CARB on December 11, 2008 and included measures to address GHG emission reduction strategies related to energy efficiency, water use, and recycling and solid waste, among other measures. Many of the GHG reduction measures included in the Scoping Plan (e.g., Low Carbon Fuel Standard, Advanced Clean Car standards, and Cap-and-Trade) have been adopted since approval of the Scoping Plan.

Senate Bill (SB) 32, signed into law on September 8, 2016, extends AB 32 by requiring the State to further reduce GHGs to 40 percent below 1990 levels by 2030 (the other provisions of AB 32 remain unchanged). On December 14, 2017, CARB adopted the 2017 Scoping Plan, which provides a framework for achieving the 2030 target. The 2017 Scoping Plan relies on the continuation and

expansion of existing policies and regulations, such as the Cap-and-Trade Program, as well as implementation of recently adopted policies and policies, such as SB 350 and SB 1383 (see below). The 2017 Scoping Plan also puts an increased emphasis on innovation, adoption of existing technology, and strategic investment to support its strategies. As with the 2013 Scoping Plan Update, the 2017 Scoping Plan does not provide project-level thresholds for land use development. Instead, it recommends that local governments adopt policies and locally appropriate quantitative thresholds consistent with statewide per capita goals of 6 MT CO_2e by 2030 and 2 MT CO_2e by 2050 (CARB 2017). As stated in the 2017 Scoping Plan, these goals may be appropriate for plan-level analyses (city, county, subregional, or regional level), but not for specific individual projects because they include all emissions sectors in the State (CARB 2017).

AB 1279, "The California Climate Crisis Act," was passed on September 16, 2022, and declares the State would achieve net zero GHG emissions as soon as possible, but no later than 2045, and to achieve and maintain net negative GHG emissions thereafter. In addition, the bill states that the State would reduce GHG emissions by 85 percent below 1990 levels no later than 2045. The Draft 2022 Scoping Plan Update has been prepared to assess the progress towards the 2030 target as well as to outline a plan to achieve carbon neutrality no later than 2045. The 2022 Scoping Plan Update focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities (CARB 2022).

Senate Bill 375

The Sustainable Communities and Climate Protection Act of 2008 (SB 375), signed in August 2008, enhances the state's ability to reach AB 32 goals by directing the CARB to develop regional GHG emission reduction targets to be achieved from passenger vehicles by 2020 and 2035. SB 375 aligns regional transportation planning efforts, regional GHG reduction targets, and affordable housing allocations. Metropolitan Planning Organizations (MPOs) are required to adopt a Sustainable Communities Strategy (SCS), which allocates land uses in the MPO's Regional Transportation Plan (RTP). Qualified projects consistent with an approved SCS or Alternative Planning Strategy (categorized as "transit priority projects") can receive incentives to streamline CEQA processing.

On March 22, 2018, CARB adopted updated regional targets for reducing GHG emissions from 2005 levels by 2020 and 2035. The Santa Barbara County Association of Governments (SBCAG) adopted the Connected 2050 RTP/SCS to demonstrate that the SBCAG region would achieve emissions reductions consistent with targets set forth by SB 375.

Senate Bill 1383

Adopted in September 2016, SB 1383 (Lara, Chapter 395, Statues of 2016) requires the CARB to approve and begin implementing a comprehensive strategy to reduce emissions of short-lived climate pollutants. SB 1383 requires the strategy to achieve the following reduction targets by 2030:

- Methane – 40 percent below 2013 levels
- Hydrofluorocarbons – 40 percent below 2013 levels
- Anthropogenic black carbon – 50 percent below 2013 levels

SB 1383 also requires the California Department of Resources Recycling and Recovery (CalRecycle), in consultation with the CARB, to adopt regulations that achieve specified targets for reducing organic waste in landfills.

Senate Bill 100

Adopted on September 10, 2018, SB 100 supports the reduction of GHG emissions from the electricity sector by accelerating the state's Renewables Portfolio Standard (RPS) Program, which was last updated by SB 350 in 2015. SB 100 requires electricity providers to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020, 60 percent by 2030, and 100 percent by 2045.

Executive Order B-55-18

On September 10, 2018, the former Governor Brown issued Executive Order (EO) B-55-18, which established a new statewide goal of achieving carbon neutrality by 2045 and maintaining net negative emissions thereafter. This goal is in addition to the existing statewide GHG reduction targets established by SB 375, SB 32, SB 1383, and SB 100.

Clean Energy, Jobs, and Affordability Act of 2022 (Senate Bill 1020)

Adopted on September 16, 2022, SB 1020 creates clean electricity targets for eligible renewable energy resources and zero-carbon resources to supply 90 percent of retail sale electricity by 2035, 95 percent by 2040, 100 percent by 2045, and 100 percent of electricity procured to serve all state agencies by 2035. This bill shall not increase carbon emissions elsewhere in the western grid and shall not allow resource shuffling.

California Building Standards Code

The CEC first adopted the Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the State. Although not originally intended to reduce GHG emissions, increased energy efficiency, and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods.

Part 11 of the Title 24 Building Standards is referred to as the California Green Building Standards (CALGreen) Code and was developed to help the State achieve its GHG reduction goals under HSC Division 25.5 (e.g., AB 32) by codifying standards for reducing building-related energy, water, and resource demand, which in turn reduces GHG emissions from energy, water, and resource demand. The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) planning and design; (2) energy efficiency; (3) water efficiency and conservation; (4) material conservation and resource efficiency; and (5) environmental air quality." The CALGreen Code is not intended to substitute for or be identified as meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission. The CALGreen Code establishes mandatory measures for new residential and non-residential buildings. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality.

On August 11, 2021, the CEC adopted the 2022 Title 24 Standards, which go into effect on January 1, 2023. The 2022 standards continue to improve upon the previous (2019) Title 24 standards for new construction of, and additions and alterations to, residential and non-residential buildings (CEC 2022a). The 2022 Title 24 Standards "build on California's technology innovations, encouraging energy efficient approaches to encourage building decarbonization, emphasizing in particular on heat pumps for space heating and water heating. This set of Energy Codes also extends the benefits of photovoltaic and battery storage systems and other demand flexible technology to work in combinations with heat pumps to enable California buildings to be responsive to climate change. This Energy code also strengthens ventilation standards to improve indoor air quality. This update provides crucial steps in the state's progress toward 100 percent clean carbon neutrality by midcentury" (CEC 2022b). The 2022 Energy Code is anticipated to reduce GHG emissions by 10 MMT of CO_2e over the next 30 years and result in approximately 1.5 billion dollars in consumer savings (CEC 2022c). Compliance with Title 24 is enforced through the building permit process.

c. Local Regulations

Santa Barbara County Air Pollution Control District

As the local air quality management agency, the SBCAPCD is required to monitor air pollutant levels to ensure that State and federal air quality standards are met and, if they are not met, to develop strategies to meet the standards. Depending on whether the standards are met or exceeded, the SCCAB is classified as being in "attainment" or "nonattainment." In areas designated as non-attainment for one or more air pollutants, a cumulative air quality impact exists for those air pollutants, and the human health impacts described in Section 2.1, *Environmental and Regulatory Setting*, are already occurring in that area as part of the environmental baseline condition.

Under State law, air districts are required to prepare a plan for air quality improvement for pollutants for which the district is in non-compliance. The *2001 Clean Air Plan* (2002) was the first plan prepared by SBCAPCD and established specific planning requirements to maintain the State one-hour O_3 standard. In 2006, CARB revised the CAAQS and added an 8-hour average to the O_3 standard. Both components of the standard must now be met before CARB can designate an area to be in attainment. The most recent *2022 Ozone Plan* was adopted by SBCAPCD in December 2022 and was the seventh update to the *2001 Clean Air Plan*. The *2022 Ozone Plan* addresses the State O_3 standards only because SBCAPCD is designated "attainment" for the federal 8-hour O_3 standards, including the most recent standard of 0.070 ppm promulgated by the United States EPA in 2015.

To minimize potential impacts from the plan emissions, the SBCAPCD implements rules and regulations for emissions that may be generated by various uses and activities. The rules and regulations detail pollution-reduction measures that must be implemented during construction and operation of Projects. Rules and regulations relevant to the plan include the following:

- **Rule 345 (Control of Fugitive Dust from Construction and Demolition Activities).** This rule establishes fugitive dust control requirements for any activity associated with construction or demolition of a structure or structures.
- **Rule 323.1 (Architectural Coatings).** This rule establishes volatile organic content limits for architectural coatings that are manufactured, blended, repackaged, supplied, sold, or offered for sale within the SBCAPCD. Rule 323.1 limits the volatile organic content to 50 grams per liter for flat coatings and 100 grams per liter for nonflat coatings and traffic marking coatings.

- **Rule 329 (Cutback and Emulsified Asphalt Paving Materials).** This rule establishes ROC content limits pertaining to the manufacture, application, and sale of cutback and emulsified asphalt materials for paving, construction, and maintenance of streets, highways, parking lots, and driveways.

SBCAG Connected 2050 RTP/SCS

The Connected 2050 RTP/SCS was adopted by Santa Barbara County Association of Governments (SBCAG) in 2021 and updated in April 2025, and it builds upon the goals, policies, and forecasts of preceding plans. The Connected 2050 RTP/SCS demonstrates that the SBCAG region would achieve emissions reductions consistent with targets set forth by SB 375. GHG reductions achieved through the Connected 2050 RTP/SCS would result in corresponding reductions in energy consumption in the region. The Connected 2050 RTP/SCS sets forth goals and objectives related to mixed-use development and the jobs-housing balance by allotting more housing to the southern portion of Santa Barbara County, as well as incorporating region-specific analysis of environmental justice indicators. Policies in the Connected 2050 RTP/SCS applicable to the plan include meeting SB 375 requirements, promoting renewable energy, and promoting alternative transportation (SBCAG 2025).

City of Santa Maria

The City of Santa Maria has not adopted a qualified greenhouse gas reduction plan pursuant to CEQA Guidelines Section 15183.5(b)(1). Therefore, this analysis does not utilize the tiering and streamlining provisions of CEQA Guidelines Section 15183.5(b)(2) in evaluating the significance of the plan's impacts related to GHG emissions.

4.2.3 Impact Analysis

a. Methodology and Significance Thresholds

Air Quality Methodology

The assessment of potential environmental impacts related to air quality is based on a review of regional air quality plans and data within the plan. As a programmatic document, this EIR presents a citywide assessment of the plan. Table 4.2-5 summarizes the land use assumptions used in the California Emissions Estimator Model (CalEEMod), which represent the net new uses from the 2045 General Plan Update as detailed under Section 2.6.5 of the *Project Description*:

Table 4.2-5 CalEEMod Land Use Assumptions

Land Use Categories	New Uses	Reduction in Uses
Residential	+16,140 units	–
Mixed-Use (assumed to be office uses in CalEEMod)	+452 ac	–
Industrial	+7 ac	–
Recreational Parks	+33 ac	–
Planned Future Development (assumed to be office uses in CalEEMod)	+~~1,021~~ 1,012 ac	–
Commercial	–	-463 ac

N/A = not applicable; ac = acres

Construction Emissions

Construction-related emissions are temporary but may still cause adverse air quality impacts. Construction of development associated with the 2045 General Plan Update would generate temporary emissions from three primary sources: the operation of construction equipment (e.g., scrapers, loaders, dump trucks, etc.); ground disturbance during site preparation and grading, which creates fugitive dust; and the application of asphalt, paint, or other oil-based substances. At this time, there is not sufficient detail to allow project-level analysis and thus it would be speculative to analyze project-level impacts. Rather, construction impacts for the 2045 General Plan Update are discussed qualitatively.

Operational Emissions

Operational emissions were estimated using CalEEMod, version 2022.1. CalEEMod uses default and project-specific information, including the plan's land uses, square footage for different uses (e.g., multi-family residence, hotel, etc.), and location, to estimate the plan's operational emissions. Land use assumptions are included in Table 4.2-5**.**

Operational emissions would be comprised of mobile source emissions, energy emissions, and area source emissions. Area source emissions are generated by landscape maintenance equipment, consumer products, and architectural coating. Emissions attributed to energy use include electricity and natural gas consumption for space and water heating. The energy use estimates account for the 2019 Building Energy Efficiency Standards (Title 24). This is a conservative assumption since the energy use estimates do not account for potential energy efficiency measures required by the subsequent Title 24 update in 2022, as well as anticipated future updates. Mobile source emissions were estimated using vehicle activity data presented in Section 4.7, *Transportation and Traffic*. Table 4.2-6 shows the 2045 General Plan Update's VMT per capita for 2045. Annual VMT were estimated by multiplying the daily VMT per household by the projected increase of 16,140 residential units and by 365 days per year. Similarly, daily VMT per employee was multiplied by the projected increase of 23,750 employees and by 365 days to estimate annual employee-related VMT. This approach represents a conservative assumption, as it applies daily VMT rates uniformly across all days of the year, without accounting for reduced travel on weekends or holidays.

Table 4.2-6 Plan 2045 VMT

Activity	VMT per Household	VMT per Employee
VMT	47.6	9.8

VMT = Vehicle Miles Traveled

Source: Santa Maria Travel Demand Model, GHD, June 2025.

Air Quality Significance Thresholds

This analysis follows the guidance and methodologies recommended in Appendix G of the State CEQA Guidelines and SBCAPCD's *Scope and Content of Air Quality Sections in Environmental Documents* (2022a). Pursuant to the CEQA Guidelines, air quality impacts related to a project would be significant if the project would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State ambient air quality standard;

c) Expose sensitive receptors to substantial pollutant concentrations; and/or
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

According to the SBCAPCD *Scope and Content of Air Quality Sections in Environmental Documents*, a project would have a significant air quality impact on the environment if operation of the project would:

a) Emit from all project sources (both stationary and mobile) less than 240 pounds per day of ROC;
b) Emit from all project sources (both stationary and mobile) less than 240 pounds per day of NO_X;
c) Emit from all project sources (both stationary and mobile) less than 80 pounds per day of PM_{10};
d) Emit less than 25 pounds per day of ROC from motor vehicle trips only;
e) Emit less than 25 pounds per day of NO_X from motor vehicle trips only; and
f) Not cause or contribute to a violation of any California or National Ambient Air Quality Standard (except ozone); or
g) Not exceed the public notification health risk thresholds adopted by the SBCAPCD of 10 excess cancer cases in a million for cancer risk or a Hazard Index of more than 1.0 for non-cancer risk; or
h) Be consistent with the latest adopted in federal and State air quality plans for Santa Barbara County

The SBCAPCD *Scope and Content of Air Quality Sections in Environmental Documents* state that, due to the relatively low background ambient CO levels in Santa Barbara County, localized CO impacts associated with congested intersections are not expected to exceed the CO health-related air quality standards. As such, CO hotspot analyses are not required.

Plan Consistency

Consistency with land use and population forecasts in local and regional plans, including the 2022 Ozone Plan (previously known as the Clean Air Plan), is required under CEQA for all projects.

The 2022 Ozone Plan relies primarily on the land use and population projections provided by SBCAG and CARB on-road emissions forecast as a basis for vehicle emission forecasting (SBCAPCD 2022b). The 2022 Ozone Plan uses SBCAG's Countywide Regional Transportation Demand Model for on-road mobile source emissions estimates and SBCAG's socio-economic projections contained in the most recent RTP/SCS to form the basis for some stationary and area source growth forecasts.

The SBCAPCD's *Scope and Content of Air Quality Sections in Environmental Documents* States that any general plan amendment that would provide for increased population growth above that forecasted in the most recently adopted Ozone Plan is inconsistent with the Ozone Plan and may have a significant impact on air quality (SBCAPCD 2022a).

Toxic Air Contaminants

The USEPA considers those pollutants that could cause cancer risks between one in 10,000 (1.0×10^{4}) and one in one million (1.0×10^{-6}) for risk management. Proposition 65 (California Health and Safety Code Section 25249.6), enacted in 1986, prohibits a person in the course of doing business from knowingly and intentionally exposing any individual to a chemical that has been listed as known to the State to cause cancer or reproductive toxicity without first giving clear and reasonable

warning. For a chemical that is listed as a carcinogen, the "no significant risk" level under Proposition 65 is defined as the level that is calculated to result in not more than one excess case of cancer in 100,000 individuals (1.0×10^{-5}). The SBCAPCD recommends the use of this risk level (also reportable as 10 in one million) as the significance threshold for TACs. The SBCAPCD also recommends that the non-carcinogenic hazards of TACs should not exceed a hazard index (the summation of the hazard quotients for all chemicals to which an individual would be exposed) of 1.0 for either chronic or acute effects (SBCAPCD 2022a).

GHG Methodology

GHG emissions result from both direct and indirect sources. Direct emissions include emissions from fuel combustion in vehicles and natural gas combustion from stationary sources. Indirect sources include off-site emissions occurring as a result of electricity and water consumption and solid waste. In addition, construction activities would result in direct and indirect emissions. Details for mobile source, energy source, and area source inputs included in the modeling of GHG emissions are provided above under Air Quality Methodology.

As discussed above, the 2045 General Plan Update is analyzed for consistency with the 2022 Scoping Plan and SBCAG 2050 RTP/SCS.

GHG Significance Thresholds

Appendix G of the CEQA Guidelines States that a project may have a significant adverse impact if it would:

1. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; and/or
2. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

The majority of individual projects do not generate sufficient GHG emissions to directly influence climate change. However, physical changes caused by a project can contribute incrementally to cumulative effects that are significant, even if individual changes resulting from a project are limited. The issue of climate change typically involves an analysis of whether a project's contribution towards an impact would be cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (CEQA Guidelines, Section 15064[h][1]).

According to the CEQA Guidelines, projects can tier from a qualified GHG reduction plan, which allows for project-level evaluation of GHG emissions through the comparison of the proposed project's consistency with the GHG reduction policies included in a qualified GHG reduction plan. This approach is considered by the Association of Environmental Professionals [AEP] (2016) in its white paper, *Beyond Newhall and 2020*, to be the most defensible approach presently available under CEQA to determine the significance of a project's GHG emissions.

The City of Santa Maria has not adopted a numerical significance threshold for assessing impacts related to GHG emissions. Therefore, the 2045 General Plan Update is evaluated based on consistency with the 2022 Scoping Plan and SBCAG 2050 RTP/SCS.

b. Projects Impacts and Mitigation Measures

Threshold 1:	Would the project conflict with or obstruct implementation of the applicable air quality plan?

Impact AQGHG-1 THE 2045 GENERAL PLAN UPDATE WOULD RESULT IN NEW EMISSIONS THAT MAY EXCEED THE 2022 OZONE PLAN'S DIRECT AND INDIRECT EMISSIONS INVENTORY FOR THE COUNTY. AS A RESULT, THE PLAN WOULD CONFLICT WITH OR OBSTRUCT IMPLEMENTATION OF THE 2022 OZONE PLAN. THIS IMPACT WOULD BE SIGNIFICANT AND UNAVOIDABLE.

The SBCAPCD Guidelines State that a project is consistent with the 2022 Ozone Plan (previously known as the Clean Air Plan) if its direct and indirect emissions have been accounted for in the 2022 Ozone Plan's emissions forecast assumptions, and if it would incorporate the standard fugitive dust control measures recommended by SBCAPCD during construction activities.

Emissions Forecast Assumptions

The 2022 Ozone Plan's direct and indirect emissions inventory for the County as a whole is reliant on population projections provided by the SBCAG. SBCAG generates population projections based on local General Plans. In this case, SBCAG utilized population projections contained in the existing City of Santa Maria General Plan, which are based on existing and anticipated land uses in the city. As discussed in Section 4.9, *Effects Found Not to be Significant,* the proposed plan would add 16,140 additional residential units leading to an increase of approximately 58,265 new residents.[3] This estimate is based on the California Department of Finance's population estimates, which identified the average persons per household in Santa Maria as 3.61 in 2024 (DOF 2024) and assumes full occupancy of residential units at this rate. Actual population growth may be lower. According to the SBCAG Regional Growth Forecast 2050 for Santa Barbara County, the population of Santa Maria is expected to increase by 34,600 residents by 2050. The Plan's anticipated addition of roughly 58,265 residents by the year 2045 would exceed SBCAG's projection by roughly 23,665 residents or 31 percent. Although SBCAG would update their growth projections to be consistent with the 2045 General Plan Update during the next planning cycle, the level of population growth and associated development anticipated under the 2045 General Plan Update would substantially exceed the existing SBCAG population forecasts. In addition, as discussed below under Impact AQGHG-2, the 2045 General Plan Update would exceed SBCAPCD's construction and operational criteria pollutant thresholds, which represents a conflict with the goals and measures outlined in the 2022 Ozone Plan. Therefore, this impact would be significant and unavoidable.

Fugitive Dust Control Measures

Pursuant to SBCAPCD Guidelines to be consistent with the 2022 Ozone Plan, a project must incorporate the standard fugitive dust control measures recommended by SBCAPCD during construction activities. The 2045 General Plan Update contains the following policy and action that would require fugitive dust control measures and the use of SBCACPD's short-term construction emissions guidelines.

[3] This calculation represents a conservative analysis in which every potential residential unit (16,140 as described in Section 2.6.5, Proposed 2045 General Plan Buildout) is occupied at the full potential persons per household rate.

Policy COS-5.3: Fugitive Dust Emissions. Mitigate air pollutants and fugitive dust emissions resulting from construction and demolition activities by requiring the use of best management practices consistent with SBCAPCD Guidelines regarding fugitive dust control.

Action COS 5.3.1: Utilize SBCAPCD's short-term construction emissions guidelines to determine levels of significance for construction-related emissions.

Policies included in the 2045 General Plan Update would ensure that future development facilitated by the plan would comply with SBCAPCD's standard fugitive dust control measures, ensuring consistency with this component of the 2022 Ozone Plan.

Mitigation Measures

The 2045 General Plan Update includes policies which are intended to achieve consistency with the 2022 Ozone Plan's direct and indirect emissions inventory for the County. However, there is no set of General Plan policies or mitigation measures that could feasibly achieve consistency with SBCAG's population forecasts or reduce emissions in a manner that would be consistent with the 2022 Ozone Plan's direct and indirect emissions inventory for the County as a whole.

Significance After Mitigation

Policies included in the 2045 General Plan Update would ensure that future development facilitated by the 2045 General Plan Update would comply with SBCAPCD's standard fugitive dust control measures. However, because the 2045 General Plan Update would substantially exceed SBCAG's population forecasts and would result in new emissions that could exceed 2022 Ozone Plan's direct and indirect emissions inventory for the County as a whole, this impact would be significant and unavoidable.

Threshold 2:	Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or State ambient air quality standard?

Impact AQGHG-2 THE 2045 GENERAL PLAN UPDATE COULD RESULT IN A CUMULATIVELY CONSIDERABLE NET INCREASE OF ALL CRITERIA POLLUTANTS FOR WHICH THE PLAN REGION IS IN NON-ATTAINMENT UNDER AN APPLICABLE FEDERAL OR STATE AMBIENT AIR QUALITY STANDARD. EVEN WITH IMPLEMENTATION OF MITIGATION MEASURE AQGHG-2, THIS IMPACT WOULD BE SIGNIFICANT AND UNAVOIDABLE.

Construction

Construction of development facilitated by the 2045 General Plan Update may involve activities that result in air pollutant emissions. Construction activities such as demolition, grading, construction worker travel, delivery and hauling of construction supplies and debris, and fuel combustion by on-site construction equipment would generate pollutant emissions. These construction activities would temporarily create emissions of dust, fumes, equipment exhaust, and other air contaminants, particularly during site preparation and grading. The extent of daily emissions, particularly ROC and NO_X emissions, generated by construction equipment, would depend on the quantity of equipment used and the hours of operation for each project. The extent of $PM_{2.5}$ and PM_{10} emissions would depend upon the following factors: 1) the amount of disturbed soils; 2) the length of disturbance time; 3) whether existing structures are demolished; 4) whether excavation is involved; and 5)

whether transporting excavated materials offsite is necessary. Dust emissions can lead to both nuisance and health impacts.

SBCAPCD does not currently have quantitative thresholds of significance for plan-level construction that would apply to the 2045 General Plan Update. However, CEQA requires that the short-term impacts such as exhaust emissions from construction equipment and fugitive dust generation during grading be analyzed. If an individual project's construction emissions fall below the project-level thresholds, the plan's impacts on regional air quality would be individually and cumulatively less than significant. According to SBCAPCD's *Scope and Content of Air Quality Sections in Environmental Documents,* it recommends quantification of construction-related emissions and suggests a 25 tons per year threshold for ROC or NO_X as a guideline for determining the significance of construction impacts (SBCAPCD 2022a). This is a limit that requires offsets if the construction activity is for a project that requires SBCAPCD permits and also provides guidance for other construction projects involving standard grading and building activities. In addition, standard dust control measures must be implemented for any discretionary project involving earthmoving activities, regardless of size or duration. According to the SBCAPCD, proper implementation of these required measures reduces fugitive dust emissions to a level that is less than significant (SBCAPCD 2022a).

Construction of development envisioned under the 2045 General Plan Update would temporarily increase air pollutant emissions, possibly creating localized areas of unhealthy air pollution concentrations or air quality nuisances. To promote clean air quality to protect public health and safety and to minimize adverse air quality impacts, the 2045 General Plan Update includes Policies COS-5.1 through 5.3 and associated actions which would minimize emissions of air contaminants associated with buildout of the 2045 General Plan Update. These policies are listed below:

Policy COS-5.1: Santa Barbara County Air Pollution Control District policies. Ensure consistency between the City and the Santa Barbara County Air Pollution Control District (SBCAPCD) air quality plans and regulations. Continue to enforce the standards and regulations set by the SBCAPCD.

Action COS-5.1.1: Continue to refer projects requiring an Air Pollution Control District (APCD) permit to the SBCAPCD and require ACPD permit approval.

Action COS-5.1.2: Evaluate potential impacts of proposed development on air quality during the development and environmental review process, using ~~Air Pollution Control District (~~APCD~~)~~ threshold standards as guidelines

Action COS-5.1.3: Ensure new development complies with the ~~Santa Barbara County Congestion Management Program (CMP),~~ Air Quality Attainment Plan (AQAP), Ozone Plan, and other relevant regulations during the development and environmental review process.

Policy COS-5.2: Agricultural air pollutant emissions. Reduce air pollutant emissions associated with agricultural uses.

Action COS-5.2.1: Work with agricultural operators located within City limits and in adjacent unincorporated areas to encourage the adoption of farming practices that minimize dust, consistent with the Santa Barbara County's dust control measures, including limiting plowing, disking, mowing, and tilling when soil is dry and winds are high, and using surface coverings or cover crops to reduce wind erosion and stabilize soil.

Action COS-5.2.2: Coordinate with SBCAPCD to report illegal burnings and enforce SBCAPCD regulations pertaining to agricultural burnings.

Action COS-5.2.3: Collaborate with ~~SBCAPCD~~ Santa Barbara County Agricultural Commissioner's Office to monitor pesticide residues in the air and enforce pesticide use and storage regulations.

Action COS-5.2.4: Update the Municipal Code to establish a minimum buffer requirement between agricultural uses, including agricultural supply businesses, and development based on the type of use. Sensitive land uses, including residential uses, schools, day cares, senior homes, and hospitals, shall require the largest buffer distance from agricultural and related uses.

Action COS-5.2.5: Update the Municipal Code to require the use of green walls or vegetation barriers in combination with minimum buffers to provide a physical barrier between agricultural and sensitive uses.

Policy COS-5.3: Fugitive dust emissions. Mitigate air pollutants and fugitive dust emissions resulting from construction and demolition activities by requiring the use of best management practices consistent with SBCAPCD Guidelines regarding fugitive dust control.

Action COS-5.3.1: Utilize SBCAPCD's short-term construction emissions guidelines to determine levels of significance for construction-related emissions

While consistency with SBCAPCD's Guidelines through implementation of fugitive dust control measures would reduce impacts from construction emissions to less than significant for the majority of projects, specific project-level details are unknown at this level of planning and individual projects may still exceed SBCAPCD thresholds. Therefore, construction impacts would be significant and unavoidable.

Operation

Reasonably expected future development from the 2045 General Plan Update would generate long-term regional air pollutant emissions, which would result from mobile sources (motor vehicle exhaust) and area sources, such as consumer products and natural gas combustion. Emissions from motor vehicle exhaust were estimated using VMT data for the 2045 General Plan Update (2045). The impact analysis is based on net new uses within the city as detailed in Section 2, *Project Description*.

Operation of development facilitated by the 2045 General Plan Update would generate criteria air pollutant emissions associated with area sources (e.g., architectural coatings, consumer products, and landscaping equipment), energy sources (i.e., use of natural gas for space and water heating), and mobile sources (i.e., vehicle trips to and from the project site). The 2045 General Plan Update would increase residential, office, industrial, and recreational land uses under 2045 buildout, and would decrease commercial uses under 2045 buildout. Operational emissions were based on the plan characteristics described in Section 2, *Project Description,* and the new and reduced land uses categories proposed by the plan as compared to the existing City land use designations (Table 4.2-5). In addition, VMT per capita data presented in Table 4.2-6 were used to generate estimates of annual VMT.

Table 4.2-7 shows the net difference in operational emissions by subtracting net new uses by net reduction in uses. As shown in Table 4.2-7, the net new emissions would exceed SBCAPCD thresholds for all sources and mobile sources. Therefore, this impact would be potentially significant.

Table 4.2-7 Estimated Operational Emissions

Emissions Source	Maximum Daily Emissions (pounds per day)					
	ROC	NO_x	CO	SO_2	PM_{10}	$PM_{2.5}$
New Uses						
Mobile	55	94	1,314	5	615	157
Area	2,491	32	3,724	<1	5	4
Energy	55	493	372	3	38	38
Total	**2,601**	**619**	**5,410**	**8**	**658**	**199**
Reduction in Uses						
Mobile	4	6	84	<1	39	10
Area	639	7	877	<1	9	9
Energy	14	122	103	1	9	9
Total	**657**	**135**	**1,064**	**1**	**57**	**28**
Net New Emissions						
Net New Emissions	**1,944**	**484**	**4,346**	**7**	**601**	**171**
Threshold (area + energy + mobile)	240	240	N/A	N/A	80	N/A
Threshold Exceeded?	**Yes**	**Yes**	**N/A**	**N/A**	**Yes**	**N/A**
Threshold (mobile only)	25	25	N/A	N/A	N/A	N/A
Threshold Exceeded?	**Yes**	**Yes**	**N/A**	**N/A**	**N/A**	**N/A**

ROC = reactive organic compounds, NO_x = nitrogen oxides, CO = carbon monoxide, SO_2 = sulfur dioxide, PM_{10} = particulate matter 10 microns in diameter or less, $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter

Notes: All emissions modeling was completed using CalEEMod. See Appendix B for modeling results. Emissions presented are the highest of the winter and summer modeled emissions.

Mitigation Measures

AQGHG-2 Project-Level Air Quality Analysis and Mitigation

The City shall require, where it is determined as necessary, applicants for future discretionary development projects facilitated by the 2045 General Plan Update to prepare a project-specific air quality analysis in accordance with SBCAPCD Environmental Review Guidelines. The analysis shall quantify construction and operational emissions and compare estimated emissions to the SBCAPCD's adopted thresholds of significance for criteria air pollutants. If the analysis determines that emissions would exceed any of the applicable thresholds, the project applicant shall implement all feasible mitigation measures to reduce emissions to below the thresholds. All mitigation measures shall be documented and verified by the lead agency prior to project approval or issuance of grading/building permits.

Significance After Mitigation

While consistency with SBCAPCD's Guidelines through implementation of fugitive dust control measures would reduce impacts from construction emissions to less than significant for the majority of projects, specific project-level details are unknown at this level of planning and individual projects may still exceed SBCAPCD thresholds. Therefore, construction impacts would be significant and unavoidable.

Implementation of Mitigation Measure AQGHG-2 would require project-specific air quality analyses and incorporation of mitigation for future development facilitated by the 2045 General Plan Update.

However, because the nature and intensity of future projects are not known at this time, construction and operational impacts would be significant and unavoidable.

Threshold 3:	Would the project expose sensitive receptors to substantial pollutant concentrations?

Impact AQGHG-3 CONSTRUCTION ACTIVITIES FOR PROJECTS LASTING LONGER THAN TWO MONTHS OR LOCATED WITHIN 1,000 FEET OF SENSITIVE RECEPTORS COULD EXPOSE SENSITIVE RECEPTORS TO SUBSTANTIAL POLLUTANT CONCENTRATIONS. HOWEVER, WITH IMPLEMENTATION OF MITIGATION MEASURE AQGHG-3, THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Construction

Construction-related activities associated with new development facilitated by the 2045 General Plan Update would result in DPM exhaust emissions from off-road, heavy-duty diesel equipment associated with site preparation (e.g., excavation, grading, clearing), building construction, and other construction activities. DPM is identified as a TAC by CARB. The potential cancer risk from the inhalation of DPM (discussed in the following paragraphs) outweighs the potential non-cancer health impacts (CARB 2025a) and is therefore the focus of this analysis.

Generation of DPM from construction typically occurs in a single area for a short period. Future construction would occur over approximately 20 years (assuming a buildout year of 2045), but use of diesel-powered construction equipment in any one area would likely occur in less than one year for an individual project and would cease when construction is completed in that area. It is impossible to quantify risk without identified specific project details and locations.

The extent of DPM emissions from any individual construction project depend upon the following factors: (1) the amount of disturbed soils; (2) the length of disturbance time; (3) whether existing structures are demolished; (4) whether excavation is involved; and (5) whether transporting excavated materials off site is necessary. DPM emissions would be reduced during the other phases of individual project construction because activities such as building construction and architectural coating require less diesel-fueled construction equipment.

SBCAPCD has not established plan-level significance thresholds for construction air pollutant emissions, and SBCAPCD CEQA guidance does not require preparation of a health risk assessment for short-term construction emissions. At this time, development facilitated by the 2045 General Plan Update does not have sufficient detail (e.g., construction schedule, amount of soil export, specific buildout parameters) to allow for project-level analysis given that project-level details are not currently available for future individual development facilitated by the 2045 General Plan Update. As a result, it would be speculative to analyze project-level impacts that could occur as a result of development facilitated by the 2045 General Plan Update. In addition, SBCAPCD does not recommend project-level emissions thresholds for construction activity. Therefore, a qualitative approach to characterizing construction-related air emissions has been employed for this analysis.

According to the OEHHA, construction of individual projects lasting longer than two months or located within 1,000 feet of sensitive receptors could potentially expose sensitive receptors to substantial pollutant concentrations, which could result in potentially significant health risk impacts.

SBCAPCD recommends diesel equipment meeting the CARB Tier 3 or higher emission standards, which results in substantially lower TAC emissions than older construction equipment, be used in place of older construction equipment to the maximum extent feasible (SBCAPCD 2022a). As a

result, construction projects within 1,000 feet of sensitive receptors, that have construction durations longer than two months, and are larger than single-family residences, ADUs, or duplexes could result in potentially significant health risk impacts if construction equipment does not meet CARB Tier 3 or higher for off-road heavy-duty diesel engines. Therefore, this impact would be potentially significant and would require implementation of Mitigation Measure AQGHG-3.

Operation

Development facilitated by the plan could accommodate a net increase of approximately 16,140 additional residential units and 23,750 new jobs in Santa Maria. CARB's guidelines do not designate residential uses as land uses that generate substantial TAC emissions. As a result, this analysis considers quantities of hazardous TACs that could be generated by new residential uses (e.g., cleaning solvents, paints, landscape pesticides, etc.) as below thresholds warranting further study under the California Accidental Release Program. Development facilitated by the 2045 General Plan Update in accordance with land use and zoning regulations would not site land uses that typically generate TACs near sensitive receptors. Additionally, new commercial, retail, or industrial uses that may include a new stationary TAC source, such as an emergency generator, the new stationary source would be required to apply for a permit-to-operate from SBCAPCD. The permitting process would ensure that the potential new stationary source would not present a significant health risk to nearby sensitive receptors. Therefore, the 2045 General Plan Update would not result in exposure of existing sensitive receptors to significant carcinogenic or toxic air contaminants and would be consistent with CARB and SBCAPCD guidelines.

To minimize health risks to sensitive receptors located near roadways, the 2045 General Plan Update includes the following policies that aim to improve air quality and minimize exposure to TAC:

- **Policy COS-6.2: Vehicle emissions reduction.** Reduce vehicle-generated air pollution and GHG emissions by expanding active transportation opportunities.
- **Policy COS-6.3: City vehicle fleet electrification.** Transition the City's vehicle fleet to electric/zero-emission vehicles.

Implementation of these policies would minimize the potential for sensitive receptors in the plan area to be exposed to significant health risks associated with roadway traffic or other operational sources of TACs that may result from new development under the 2045 General Plan Update.

Mitigation Measures

AQGHG-3 Construction Equipment Exhaust Control Measures

For individual discretionary and ministerial residential projects facilitated by the 2045 General Plan Update that would develop three or more units; would involve demolition, mass grading, or excavation and trenching phases longer than two months; and would be located within 1,000 feet of existing sensitive receptors, the City shall enforce a project specific Condition of Approval requiring the following: ~~off-road heavy-duty diesel engines to meet CARB-certified Tier 3 or higher emission standards or employ CARB-certified Level 3 diesel particulate filters to the extent that this equipment is commercially available. "Commercially available" shall be defined as the availability of required equipment in geographic proximity to the project site and within a reasonable timeframe relative to critical path construction timing. If Tier 3 or higher emission standard equipment or Level 3 diesel particulate filters are not commercially available, documentation shall be provided by the~~

~~project applicant to the City stating that Tier 3 equipment or higher emission standard or Level 3 diesel particulate filters are not commercially available with supporting evidence from the contractor. If CARB-certified Level 3 diesel particulate filters are utilized, they shall be kept in working order and maintained in operable condition according to manufacturer's specifications, as applicable.~~

a. Off-road diesel equipment 25 horsepower (hp) or greater shall be equipped with engines compliance with, or certified to meet or exceed, the California Air Resources Board's Tier 3 Final engine emissions standards. Where available, and as determined on a project-by-project basis, the use of Tier 4 or zero-emission equipment shall be utilized. Where feasible, off-road construction equipment should be either Tier-4 or zero-emission. Alternative/renewable fuels such as compressed natural gas, liquefied natural gas, or propane should be utilized to the maximum extent feasible when zero-emission is not available. Commitments to Tier 3, Tier 4 and/or zero-emission equipment shall be included in applicable bid documents, purchase orders, and contracts; successful contractors shall demonstrate the ability to supply the compliant construction equipment for use prior to ground-disturbing and construction activities.

b. All portable generators shall be powered by a source other than diesel fuel or gasoline (i.e. battery, natural gas, propane etc.).

Significance After Mitigation

Mitigation Measure AQGHG-3 would reduce potential residual health risk impacts associated with exposure of sensitive receptors to substantial pollutant concentrations of DPM and TACs. Implementation of Mitigation Measure AQGHG-3 would require construction projects that may be a substantial source of health risk exposure to sensitive receptors to ~~utilize Tier 3 equipment or higher emission standard or Level 3 diesel particulate filters to the maximum extent feasible~~ align with the District's current recommendations for control of diesel exhaust and minimization of construction-related TAC exposure impacts, which reduce potential construction-related TACs exposure impacts to a less than significant level.

Threshold 4:	Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Impact AQGHG-4 FUTURE DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD NOT CREATE OBJECTIONABLE ODORS THAT COULD AFFECT A SUBSTANTIAL NUMBER OF PEOPLE OR EXPOSE FUTURE RESIDENTS TO ODORS THAT WOULD PRODUCE A PUBLIC NUISANCE OR HAZARD. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

The occurrence and severity of objectionable odors depend on a number of factors, including the nature, frequency, and intensity of the source; the wind speeds and direction; and the sensitivity of the receiving location. Although objectionable odors seldom cause physical harm, they can be perceived as a nuisance, cause distress among the public, and result in citizen complaints.

The 2045 General Plan Update would facilitate the development of new housing units, which are odor-sensitive receptors, in areas with existing residential and commercial land uses. Construction activities for development forecasted in accordance with the 2045 General Plan Update may produce temporary odors. Examples of potential odors produced by construction activities include concentrations of unburned hydrocarbons from construction equipment tailpipes and reactive organic gases/compounds from architectural coatings. Such odors generally disperse rapidly from

individual project sites, occur at magnitudes that would not affect substantial numbers of people, and would be limited to the temporary construction period.

The SBCAPCD *Scope and Content of Air Quality Sections in Environmental Documents* (2022) states that certain projects have the potential to cause significant odor impacts because of the nature of their operation and their location. Examples include fast food restaurants, bakeries, and coffee roasting facilities. In addition, wastewater treatment plants, landfills, confined animal facilities, composting stations, food manufacturing plants, refineries, and chemical plants. Although the annexation area east of the city limits would be located in proximity to agricultural operations, such operations are not typically associated with the generation of substantial or frequent odors. Agricultural activities in the region primarily involve crop cultivation and other practices that do not constitute significant odor sources under typical operating conditions. Thus, the potential for odor-related impacts on future development within the annexation area is considered minimal. The 2045 General Plan Update would not create objectionable odors affecting a substantial number of people or expose future residents to odor in concentrations that would produce a public nuisance or hazard. Therefore, odor impacts would be less than significant.

Mitigation Measures

No mitigation is required because this impact would be less than significant.

Threshold 5:	Would the project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
Threshold 6:	Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Impact AQGHG-5 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD GENERATE GHG EMISSIONS THAT MAY HAVE A SIGNIFICANT IMPACT ON THE ENVIRONMENT AND CONFLICT WITH AN APPLICABLE PLAN, POLICY, OR REGULATION ADOPTED FOR THE PURPOSE OF REDUCING THE EMISSIONS OF GREENHOUSE GASES. THIS IMPACT WOULD BE SIGNIFICANT AND UNAVOIDABLE.

As discussed above under Section 4.2.3(a), Methodology and Significance Thresholds, the City of Santa Maria has not adopted a quantitative significance threshold for assessing impacts related to GHG emissions. Therefore, the 2045 General Plan Update is evaluated based on consistency with the 2022 Scoping Plan and SBCAG 2050 RTP/SCS. Operational emissions are provided for informational purposes. Construction emissions are not provided as specific individual project-level details are unknown at this level of planning.

The principal State GHG reduction plans and policies are AB 32, SB 32, and AB 1279. The goal of AB 32 is to reduce GHG emissions to 1990 levels by 2020. The goal of SB 32 is to reduce GHG emissions to 40 percent below 1990 levels by 2030. AB 1279 identifies a State-wide target of net-zero GHG emissions by 2045 and a goal of reducing GHG emissions by 85 percent below 1990 levels by 2045. The latest iteration of the Scoping Plan is the 2022 Scoping Plan, which focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

The 2045 General Plan Update would be generally consistent with these goals since future development would be required to comply with the latest Title 24 Green Building Code and Building

Efficiency Energy Standards. Additionally, the 2045 General Plan Update includes the following goal, policies, and actions intended to reduce GHG emissions from building energy use.

Goal COS-6: Greenhouse gas emissions. The city ~~is~~ strives to be carbon-neutral.

Policy COS-6.1: GHG reduction strategy. Develop and implement a citywide GHG reduction and monitoring strategy.

Action COS-6.1.1: Establish City GHG emissions reduction targets that are consistent with ~~s~~State-mandated targets of reducing emissions to 40 percent below 1990 levels by 2030 and achieving carbon neutrality by 2045.

Action COS-6.1.2: Develop a sustainability plan or similar document that outlines how the City will achieve its GHG reduction targets. Integrate City-led GHG reduction strategies with regional efforts.

Policy COS-6.4: Energy conservation programs. Promote energy conservation through public awareness programs.

Action COS-6.4.1: Coordinate with the Tri-County Regional Energy Network (3C-REN) to increase awareness of local incentives for improving energy efficiency for homeowners.

Action COS-6.4.2: Identify and pursue funding to create a program offering home energy audits to help property owners identify updates to increase energy efficiency and funding assistance for home retrofits.

Future development would also be served by ~~Southern California Edison~~ Pacific Gas and Electric or Central Coast Community Energy, both of which are required to increase its renewable energy procurement in accordance with SB 100 targets. Furthermore, development facilitated by the plan would be required to comply with the State's recycling and composting requirements for commercial businesses under AB 341, which requires businesses generating four or more cubic yards of solid waste per week to recycle, and AB 1826, which requires businesses generating two or more cubic yards of solid waste per week to recycle organic waste. Compliance with these state laws would maximize the plan's recycling and solid waste diversion.

Priority GHG reduction strategies outlined in the Scoping Plan include VMT reduction measures aimed at improving and increasing access to public transit by increasing density of development near transit, increasing service frequency, creating bus priority lanes, reducing or eliminating fares, and microtransit alternatives. The following 2045 General Plan Update goals, policies, and actions would reduce GHG emissions.

Goal COS-6: Greenhouse gas emissions. The city ~~is~~ strives to be carbon-neutral.

Policy COS-6.1: GHG reduction strategy. Develop and implement a citywide GHG reduction and monitoring strategy.

Action COS-6.1.1: Establish City GHG emissions reduction targets that are consistent with ~~s~~State-mandated targets of reducing emissions to 40 percent below 1990 levels by 2030 and achieving carbon neutrality by 2045.

Action COS-6.1.2: Develop a sustainability plan or similar document that outlines how the City will achieve its GHG reduction targets. Integrate City-led GHG reduction strategies with regional efforts.

Policy COS-6.2: Vehicle emissions reduction. Reduce vehicle-generated air pollution and GHG emissions by expanding active transportation opportunities.

Policy COS-6.3: City vehicle fleet electrification. Transition the City's vehicle fleet to electric/zero-emission vehicles.

Action COS-6.3.1: Amend the City's Capital Improvement Plan to incorporate the replacement of high-mileage fleet vehicles with clean fuel vehicles.

Action COS-6.3.2: Pursue ~~s~~State and federal grants for transitioning City vehicles to clean fuel sources and installing electric vehicle charging stations at City facilities.

Policies listed in Section 4.7, *Transportation,* would encourage active transportation and transit use in accordance with the 2022 Scoping Plan. However, as discussed under Impact TRA-2*,* the 2045 General Plan Update would not meet the 17 percent VMT reduction target set by CARB for the SBCAG region. As such, the forecasted VMT would not be consistent with climate goals established in the 2050 RTP/SCS.

As demonstrated above, the goal, policies, and actions provided in the 2045 General Plan Update to reduce GHG emissions from building use are consistent with measures in the 2022 Scoping Plan aimed at achieving the same thing. However, the 2045 General Plan Update would not reduce GHG emissions from vehicle use in a sufficiently to meet the 17 percent VMT reduction target established by CARB for the SBCAG region in the 2050 RTP/SCS. Therefore, the 2045 General Plan Update would conflict with the reduction of GHG emissions related to vehicle use goals of the 2022 Scoping Plan.

SBCAG has incorporated a sustainable community strategy into the 2050 RTP/SCS, which is designed to help the region achieve its SB 375 GHG emissions reduction target. The 2050 RTP/SCS demonstrates that the SBCAG region would achieve its regional emissions reduction targets for the 2020 and 2035 target years.

Table 4.2-8 Plan Consistency with the SBCAG 2050 RTP/SCS

Policies	Plan Consistency
Policy 1.1: Land Use	
The planning, construction, and operation of transportation facilities shall be coordinated with local land use planning and should encourage local agencies to: 1. Make land use decisions that adequately address regional transportation issues and are consistent with the RTP-SCS. 2. Promote better balance of jobs and housing to reduce long-distance commuting by means of traditional land use zoning, infill development, and other, unconventional land use tools, such as employer-sponsored housing programs, economic development programs, commercial growth management ordinances, average unit size ordinances and parking pricing policies. 3. Plan for transit-oriented development consistent with the RTP-SCS by: a. Concentrating residences and commercial centers in urban areas near rail stations, transit centers and along transit development corridors.	**Consistent:** The 2045 General Plan Update would facilitate the development of 16,140 net new residential units in infill and urbanized areas in proximity to services and transit which would encourage walking, bicycling, and the use of alternative transportation. The 2045 General Plan Update would also generate 23,750 net new jobs which would improve the balance of jobs and housing and reduce long-distance commuting.

Policies	Plan Consistency
b. Designing and building "complete streets" serving all transportation modes that connect high-usage origins and destinations. 4. Preserve open space, agricultural land and sensitive biological areas. 5. Identify, minimize and mitigate adverse environmental impacts and, in particular, require mitigation of traffic impacts of new land development through on-site and related off-site improvements for all modes of transportation, including incentives to encourage the use of alternative transportation modes. 6. Dissuade siting of new development in high-fire risk areas by means such as ensuring insurability and redundancy of ingress and egress.	
Policy 1.2: Air Quality	
Transportation planning and projects shall be designed to: 1. Lead to reductions in greenhouse gas and criteria pollutant emissions, consistent with the air quality goals of the region, including targets for greenhouse gas emissions from passenger vehicles in 2020 and 2035 as required by Senate Bill 375 (SB 375). 2. Be in conformity with the Air Pollution Control District Ozone Plan and the State Implementation Plan (SIP) and meet the National Ambient Air Quality Standards as required by the federal Clean Air Act.	**Inconsistent:** Future development facilitated by the plan would be required to comply with the latest Title 24 Green Building Code and Building Efficiency Energy Standards and would also be served by ~~Southern California Edison~~ Pacific Gas and Electric or Central Coast Community Energy, both of which are required to increase its renewable energy procurement in accordance with SB 100 targets. In addition, as discussed under Impact AQGHG-1, the 2045 General Plan Update would be consistent with the 2022 Ozone Plan, and would adhere to SBAPCD Rules 323.1, 329, and 345. Nonetheless, since specific project-level information is currently unknown, there is no guarantee the 2045 General Plan Update would be consistent with State legislation and the 2022 Scoping Plan with goals to achieve carbon neutrality by 2045.
Policy 1.3: Alternative Fuels and Energy	
Transportation planning and projects shall: 1. Encourage the use of alternative fuels, and the application of advanced transportation and energy technologies to reduce vehicular emission production and energy consumption. 2. Promote renewable energy and energy conservation, consistent with applicable federal, State, and local energy programs, goals, and objectives.	**Consistent.** The 2045 General Plan Update Policies COS-6.2 through 6.4 aim to reduce vehicle-generated air pollution and GHG emissions by expanding active transportation opportunities; transition the City's vehicle fleet to electric or zero-emission vehicles; and promote energy conservation through public awareness programs. Future development would also be required to comply with the latest Title 24 Green Building Code and Building Efficiency Energy Standards and incorporate energy efficient and sustainable designs and appliances.

Source: SBCAG 2025

The 2050 RTP/SCS states that one of the intents of the Sustainable Communities Strategy is "directly addressing regional jobs/housing imbalance by providing more housing on the jobs-rich South Coast and more jobs to communities in the North County" (SBCAG 2021). Improving the intra-County jobs/housing imbalance would decrease transportation demands on U.S. Highway 101, State Route 166, and State Route 1, which would reduce congestion and VMT. The plan would increase employment by adding 23,750 new jobs within the City, which would improve the City's jobs-housing ratio, reducing vehicle emissions. Therefore, the 2045 General Plan Update would be consistent with most of the policies in the SBCAG 2050 RTP/SCS, with the exception of Policy 1.2. Overall, although the 2045 General Plan Update would be generally consistent most of the policies

from the SBCAG 2050 RTP/SCS, the plan would be inconsistent with Policy 1.2 from the SBCAG 2050 RTP/SCS and the 2022 Scoping Plan, since the plan has the potential to conflict with the State-wide target of net-zero GHG emissions by 2045. Therefore, this impact would be potentially significant.

GHG emissions associated with the 2045 General Plan Update are shown below under Table 4.2-9 for informational purposes only. As shown in Table 4.2-9, the plan would result in approximately 271,807 MT CO_2e per year.

Table 4.2-9 Operational GHG Emissions

Emission Source	Annual Emissions (MT CO_2e)
Net New Uses Operational	
Mobile	83,629
Area	1,145
Energy	229,129
Water	13,486
Waste	23,447
Refrigerants	57
Total	**350,894**
Net Reduction in Uses Operational	
Mobile	5,335
Area	296
Energy	63,577
Water	4,015
Waste	5,856
Refrigerants	8
Total	**79,087**
Net New Emissions	**271,807**

MT CO_2e = metric tons of carbon dioxide equivalent.

Source: CalEEMod worksheets are in Appendix B.

Mitigation Measures

There are no feasible mitigation measures that would reduce plan area emissions of GHGs such that the plan would not potentially conflict with the State-wide target of net-zero GHG emissions by 2045.

Significance After Mitigation

No feasible mitigation measures are available to reduce impacts to a less than significant level. Therefore, this impact would be significant and unavoidable.

4.2.4 Cumulative Impacts

Air Quality

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, *Environmental Setting,* Subsection 3.3, *Cumulative Development*.

As described under Impact AQGHG-1, the SBCAPCD's approach for assessing cumulative impacts is based on consistency with the latest adopted Ozone Plan. The population estimate under the 2045 General Plan Update is considered conservative, as it assumes full occupancy of all potential residential units at the maximum persons-per-household rate.[4] Actual population growth may be lower. Nonetheless, the 2045 General Plan Update would still result in exceedance of the population forecasts for the City of Santa Maria in the 2022 Ozone Plan and would potentially exceed SBCAPCD construction and operational criteria air pollutant thresholds. Therefore, the 2045 General Plan Update would have a cumulatively considerable contribution to impacts related to consistency with the latest adopted Ozone Plan

As identified under Impact AQGHG-2, the 2045 General Plan Update would exceed SBCAPCD operational emissions thresholds for ROC, NO_X, and PM_{10}. Additionally, at this stage of planning, project-specific details regarding construction activity are currently unknown and could potentially exceed SBCAPCD thresholds after mitigation. Therefore, even with implementation of Mitigation Measure AQGHG-2, the 2045 General Plan Update would result in a cumulatively considerable net increase of criteria pollutants for which the plan region is non-attainment.

As shown under Impact AQGHG-3, construction activity may result in a potentially significant impact related to DPM and TAC exposure within the City. Health risk impacts are localized to the immediate vicinity of DPM and TAC sources, such that people affected by construction-related TAC emissions generated at one housing site would likely not be affected by construction-related TAC emissions generated at another housing site should construction activities occur simultaneously. Discussion of these impacts considers the cumulative nature of the pollutants in the region; for example, the cancer risk and non-cancer risk thresholds have been set pursuant to existing cancer risks in the area and exceeding those thresholds would be considered a cumulative impact. Implementation of Mitigation Measure AQGHG-3 would reduce concentrations of DPM and TAC emissions from construction activity associated with future development under the 2045 General Plan Update. Therefore, the plan's contribution to cumulative air quality impacts related to these pollutants would not result in a cumulatively considerable impact.

Cumulative projects would adversely affect sensitive receptors from odor emissions if cumulative projects were typical odor-producing land uses. Construction of cumulative projects would result in construction equipment-related odors; however, the temporary nature of construction would ensure less than significant cumulative odor impacts. In addition, the 2045 General Plan Update would not facilitate the development of odor-generating sources. Therefore, operational odor

[4] This calculation represents a conservative analysis in which every potential residential unit (16,140 as described in Section 2.6.5, Proposed 2045 General Plan Buildout) is occupied at the full potential persons per household rate.

impacts would be less than significant and the 2045 General Plan Update would not result in a cumulatively considerable impact related to odors.

GHG

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, *Environmental Setting,* Subsection 3.3, *Cumulative Development*.

GHG emissions and climate change are, by definition, cumulative impacts, because impacts of climate change are experienced on a global scale regardless of the location of GHG emission sources. As discussed in Section 4.2.1b, *Potential Effects of Climate Change*, the adverse environmental impacts of cumulative GHG emissions, including sea level rise, increased average temperatures, more drought years, and more large forest fires, are already occurring. As a result, cumulative impacts related to GHG emissions are significant. Thus, the issue of climate change involves an analysis of whether a project's contribution towards an impact is cumulatively considerable. As discussed under Thresholds GHG-1 and GHG-2, plan impacts related to GHG emissions would be significant and unavoidable since there is not guarantee the 2045 General Plan Update would be consistent with the State-wide target of net-zero GHG emissions by 2045. Therefore, GHG impacts would be cumulatively considerable.

4.3 Biological Resources

This section summarizes the biological resources in the plan area and analyzes the potential effects on biological resources related to implementation of the 2045 General Plan Update. This section includes a brief summary of biological resources background information and a review of known biological resources as well as potential impacts to these resources as a result of implementation of the 2045 General Plan Update. The background information and analysis in this section is partially based on the Environmental Background Report for the City of Santa Maria, prepared in December 2020 to support their General Plan Update.

4.3.1 Setting

This following information was obtained through a desktop literature review of the United States Fish and Wildlife Service's (USFWS) National Wetlands Inventory (NWI) and Information for Planning and Consultation (IPaC); the California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB); the National Oceanic and Atmospheric Administration's (NOAA) Protected Resources Application; the City of Santa Maria Existing Conditions Report (2020); and Landscape Fire and Resource Management Planning Tools (LANDFIRE) and CDFW vegetation datasets.

a. Land Cover and Vegetation Communities

Santa Maria has a Mediterranean climate characterized by warm, dry summers and cool, moist winters. Plants in this climate have adapted to grow in the early spring and winter, when water is available, and become mostly dormant in the long dry summers, when water availability is limited. The varied topography and soil types of the Santa Maria Valley have enabled a mix of native plant communities to exist in the region. Major land cover types in the Santa Maria River Valley include urbanized development, agricultural lands (which include barren land, dryland and irrigated grain crops, evergreen orchards, irrigated row and field crops, pastures, and vineyard vegetation communities), and open space (which includes annual and perennial grasslands, coast live oak woodlands, coastal scrub, eucalyptus groves, freshwater emergent wetlands, valley foothill riparian, chamise-redshank chaparral, mixed chaparral, closed-cone pine-cypress, montane riparian, and lacustrine and riverine vegetation communities). These vegetation communities were identified as occurring in the plan area by LANDFIRE's existing vegetation dataset and CDFW's California Wildlife Habitat Relationships classification scheme (CWHR) (Mayer and Laudenslayer 1988, CDFW 2025a). Urbanized development contributes to the majority (71 percent) of the plan area, with the remaining areas consisting of agriculture (9 percent), open space (12 percent), and mixed agricultural-open space (8 percent) areas. Further descriptions of these vegetation communities are provided below and illustrated in Figure 4.3-1.

Land Cover

The plan area contains substantial urban and suburban development. There are, however, areas of relatively undisturbed natural habitats. Descriptions of the vegetation communities in the plan area are listed below, based on vegetation mapping using the LANDFIRE vegetation dataset and described using CDFW CWHR habitat descriptions. Figure 4.3-1 shows the vegetation communities and land covers within the plan area.

Figure 4.3-1 Vegetation Communities in the Plan Area

Additional data provided by LANDFIRE, 2024; City of Santa Maria, 2026.

19-07303 EPS
Fig X Vegetation Types

Agricultural – Field and Row Crops

Dryland Grain Crops

Vegetation in the dryland (non-irrigated) grain and seed crops habitat includes seed producing grasses – primarily barley, cereal rye, oats, and wheat, all of which are annuals. Non-irrigated grain and seed crops are often planted in the fall, and harvested in the spring, on lands with flat to gently rolling terrain. Grain crops reduce wildlife habitat richness and diversity, as they are usually established on fertile soils, which historically supported an abundance of plants and wildlife. Many species are now controlled by fencing (e.g. deer), trapping (e.g. wild pigs), and poisoning (e.g. rodents) to prevent excessive crop losses (CDFW 2025a).

Irrigated Row, Field, and Grain Crops

Irrigated row and field crops, including seed and grain crops, are generally located on flat to gently rolling terrain; flat terrain has often been leveled to facilitate irrigation and rolling terrain is usually irrigated by sprinklers. Irrigated row, field, and grain crops do not conform to normal habitat stages, and vegetation is variable in size, shape, and grow pattern based on crop type. Some crops may form 100 percent canopy while others may have bare space between rows. Crops may be annual or perennial, and may be planted in rotation with other irrigated crops.

Row and field crops are usually established on the State's most fertile soils, which historically supported an abundance of wildlife unequalled on other sites, but many species are now controlled by fencing (e.g. deer), trapping (e.g., wild pigs), and poisoning (e.g., rodents) to prevent excessive crop losses. However, availability of irrigation water during dryer months and drought benefits many wildlife species as a source of water (CDFW 2025a).

Barren Lands

Barren habitat is defined by the absence of vegetation, and includes any habitat with less than two percent total vegetation cover by herbaceous, desert, or non-wildland species and less than 10 percent cover by shrub or tree species. Barren lands within agricultural lands generally present in the form of disked or plowed agricultural fields (CDFW 2025a).

Agricultural – Orchard

Evergreen Orchards

Evergreen orchards are typically dominated by a single species of tree, such as almonds, apples, apricots, peaches, pecans, and walnuts for deciduous orchards and avocados, grapefruit, lemons, limes, olives, oranges, and tangerines for evergreen orchards. Trees range in height at maturity depending on the species, ranging from 10 feet for dwarf varieties to upwards of 60 feet. The understory is usually composed of bare soil or cover crops or low-growing grasses, which are often intensively managed. Orchards are planted on deep fertile soils which once supported productive and diverse natural habitats. The orchards still provide anthropogenic habitat that offers wildlife, such as deer and rabbit that commonly browse on the tree foliage, an area for foraging and cover that allows animals to move through the region. Many wildlife species act as biological control agents by feeding on weed seeds and insect pests (CDFW 2025a).

Agricultural – Vineyard and Bush Fruit

Vineyard

Vineyards are composed of single species planted in rows, usually supported on wood and/or wire trellises with open space between rows. Rows under the vines are often sprayed with herbicides to prevent growth of herbaceous plants. Between rows of vines, grasses and other herbaceous plants may be planted or allowed to grow as a cover crop to control erosion (CDFW 2025a).

California Mixed Evergreen Forest and Woodland

Closed-Cone Pine-Cypress

The closed-cone pine-cypress habitat is typically dominated by a single species of one of the closed-cone pines or cypress with variable height and canopy cover based on species makeup. Cypress-dominated habitats usually occur as "arboreal islands" amongst chaparral or forest types, and pine-dominated habitats are generally patches with surrounding chaparral, Montane Hardwood-Conifer or Mixed Conifer habitats. Great horned owls and red-tailed hawks will nest in closed-cone pine forests, and numerous other species make use of the closed-cone pine-cypress habitat for feeding and cover (CDFW 2025a).

Eucalyptus

Eucalyptus habitats generally include monotypic stands of *Eucalyptus spp.* and range from single-species thickets to scattered trees to dense stands with closed canopies. Tree heights typically range from 87 to 264 feet, depending on species and spacing. Eucalyptus woodlands are found at low elevations, where freezing is not a problem. Most eucalyptus have been artificially established, usually in and around urban/rural areas. However, eucalyptus grow quickly and can be invasive and are known to become established along stream courses or within natural habitats, encroaching upon and outcompeting existing native vegetation. Eucalyptus habitats serve as roosts, perches, and nest sites for a number of bird species, particularly raptors, as well as overwintering sites for monarch butterflies (*Danaus plexippus*) (CDFW 2025a).

Chaparral

Chamise-redshank and Mixed Chaparral

Chaparral habitats are dominated by shrubs, often with thick, stiff, waxy evergreen leaves, which grow to be dense, nearly impenetrable thickets. Mixed chaparral habitats are comprised of a variable patchwork of shrub species, such as buckwheat, chamise, toyon, poison oak, ceanothus, and manzanita, whereas chamise-redshank chaparral may consist of nearly pure stands (50 percent or more relative cover) of chamise or redshank, a mixture of both, or with other shrubs such as toyon, white sage, and ceanothus.

Mixed and chamise-redshank chaparral often occur as a mosaic on low to middle elevation slopes below several woodland and forest types. Compared to chamise-redshank chaparral, mixed chaparral generally occupies more mesic sites at higher elevations or on north-facing slopes. No wildlife species are restricted to only mixed chaparral habitat; however, chamise-redshank chaparral provides habitat for deer, small mammals, birds, and reptiles (CDFW 2025a).

Coastal Scrub

Coastal scrub is a native vegetation community that is typically found on stabilized backdune slopes, ridges, and flats along the coast. Soils are typically sandy to sandy loam. Central coastal scrub typically forms a mosaic with other communities including coast bluff scrub, maritime chaparral, coast live oak woodland, and coastal prairie. Vegetation in this habitat type is composed of soft scrub of moderate to high cover and is dominated by native mock heather (*Ericameria ericoides*), California sagebrush (*Artemisia californica*), coyote brush (*Baccharis pilularis*), black sage (*Salvia mellifera*), common California-aster (*Lessingia filaginifolia* var. *filaginifolia*), dune bush lupine (*Lupinus chamissonis*), and sticky monkeyflower (*Diplacus aurantiacus*). Central coastal scrub provides habitat for a variety of vertebrate species (CDFW 2025a).

Developed – Ruderal – Landscaped

Developed – ruderal – landscaped areas refer to those which have been temporarily or permanently disturbed by human activities and include, but are not limited to, areas of residential, commercial, and industrial development; areas of nonnative vegetation resulting from human activity and disturbance, such as grading; and areas of ornamental landscaping.

Barren Lands

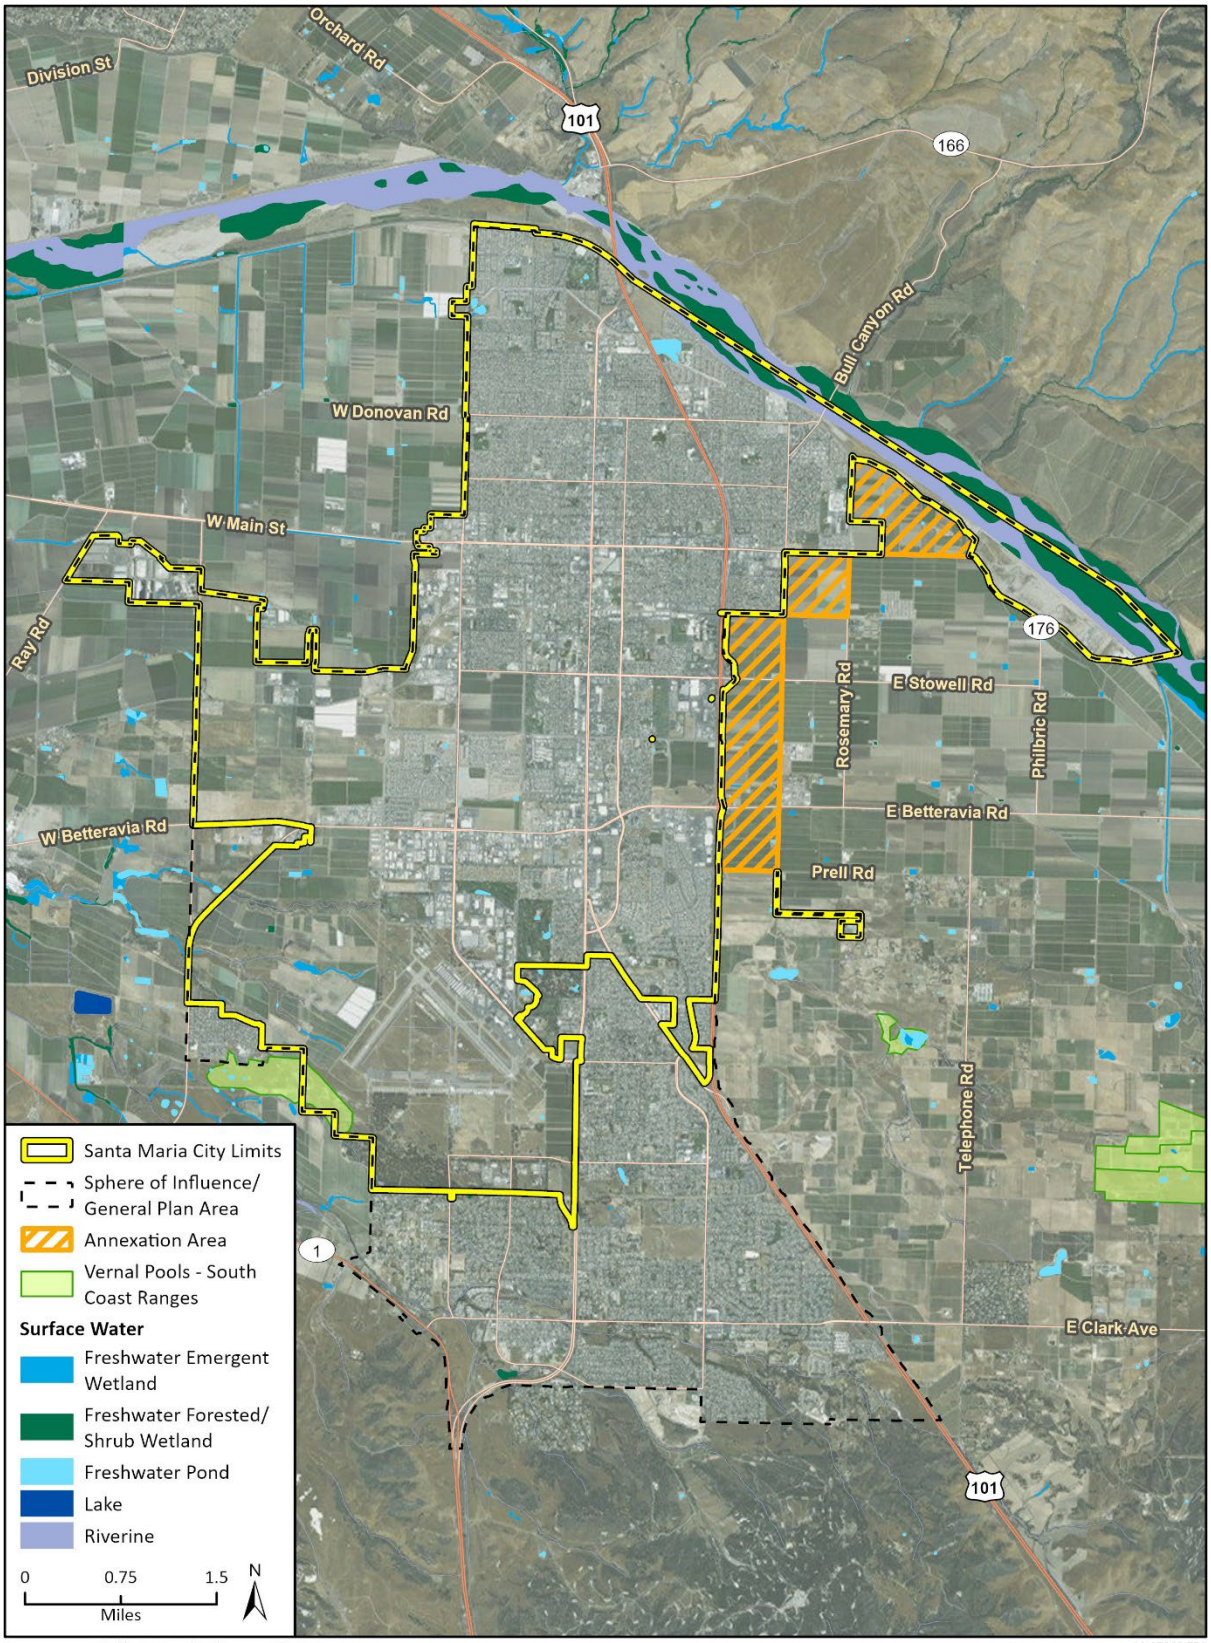
Barren habitat is defined by the absence of vegetation, and includes any habitat with less than two percent total vegetation cover by herbaceous, desert, or non-wildland species and less than 10 percent cover by shrub or tree species. Urban settings covered in pavement and buildings may also be classified as barren as long as vegetation, including non-native landscaping, does not reach the percent cover thresholds for vegetated habitats (CDFW 2025a).

Freshwater Marsh and Water

Wetlands and Streams

Wetlands and waterways, sourced from NWI and shown in Figure 4.3-2, are highly productive habitats for plants and wildlife. Coastal wetlands and riparian wetlands (linear areas adjacent to streams, creeks and drainages) are especially productive for plants, because recurrent flooding in these areas delivers influxes of soil and nutrients. Riverine refers to areas with intermittently or continuously running water, such as rivers and streams. Riverine habitats are found adjacent to riparian areas and can be contiguous to lacustrine and fresh emergent wetland habitats. Riverine areas provide habitat for many species of waterfowl, raptors, insectivorous birds, and mammals. Lacustrine refers to inland depressions or dammed riverine channels containing standing water and can vary from small ponds to large lakes or reservoirs. Lacustrine systems provide habitat for many species of small birds and raptors, reptiles, amphibians, and mammals. Permanent lacustrine systems support fish life, while intermittent types generally do not. Fresh emergent wetlands are characterized by frequently flooded areas with erect, herbaceous vegetation. Fresh emergent wetlands are among the most productive wildlife habitats in California, and provide food, cover, and water for more than 160 species of birds and numerous mammals, reptiles, and amphibians (CDFW 2025a).

Figure 4.3-2 Wetlands Within the Plan Area



Imagery provided by Esri and its licensors © 2026.
Additional data provided by NWI, 2024; BIOS, ds948, 2025; City of Santa Maria, 2026.

19-07303 EPS
Fig X Wetlands

Santa Maria contains a number of United States Fish and Wildlife Service (USFWS)-recognized wetlands, including freshwater ponds and freshwater emergent wetlands, concentrated in agricultural and open space areas, as well as freshwater forested and shrub wetland and riverine habitat along the Santa Maria River. These wetlands provide habitat for fish, wildlife, and plants; and provide a form of groundwater recharge and flooding prevention (City of Santa Maria 2020).

SOUTHERN VERNAL POOLS

Vernal pools are a type of temporary wetland that support plants and animals that are specifically adapted to living with very wet winter and spring conditions followed by very dry summer and fall conditions. Many specially-adapted crustaceans, amphibians, and insects occur only in vernal pools. Plant species associated with Southern Vernal Pools include Howell's foxtail (*Alopecurus howellii*), water pygmyweed (*Crassula aquatica*), needle spikerush (*Eleocharis acicularis*), common spikerush (*Eleocharis palustris*), western marsh cudweed (*Gnaphalium palustre*), meadow barley (*Hordeum brachyantherum*), toad rush (*Juncus bufonius*), flowering quillwort (*Lilaea scilloides*) and rough-nutlet popcornflower (*Plagiobothrys trachycarpus*) (City of Santa Maria 2020).

Barren Lands

Barren habitat is defined by the absence of vegetation, and includes any habitat with less than two percent total vegetation cover by herbaceous, desert, or non-wildland species and less than 10 percent cover by shrub or tree species. Along rivers and streams, barren land includes vertical river banks and canyon walls (CDFW 2025a).

~~b. Special Status Species~~

~~For the purposes of this analysis, special-status species were considered listed or non-listed special-status species if they were classified as one or more of the following:~~

- ~~**Listed Special-Status Species**~~
  - ~~Species listed as threatened or endangered under the Federal Endangered Species Act (FESA), including proposed and candidate species.~~
  - ~~Species listed as candidate, threatened, or endangered under the California Endangered Species Act (CESA).~~
  - ~~Plant species protected by the Native Plant Protection Act (NPPA) (State Rare).~~
- ~~**Non-listed Special-Status Species**~~
  - ~~Species designated as Fully Protected (FP), Species of Special Concern (SSC), or Watch List (WL) by the CDFW~~
  - ~~Birds designated as a Bird of Conservation Concern (BCC) by USFWS~~
  - ~~Sensitive species designated by USFWS~~
  - ~~Sensitive species designated by the United States Forest Service (USFS)~~
  - ~~Plants assigned a California Rare Plant Rank of 1 through 4 by the California Native Plant Society (CNPS)~~
  - ~~Species protected under the Bald and Golden Eagle Protection Act~~
  - ~~Bats considered by the Western Bat Working Group to be "High" or "Medium" priority~~

- ~~Species designated as locally important by the Local Agency and/or otherwise protected through ordinance, local policy, Habitat Conservation Plans (HCPs), or Natural Community Conservation Plans (NCCPs).~~

~~Queries of the USFWS's IPaC, CNDDB, and CNPS's online Inventory of Rare and Endangered Plants of California (CRPR) were conducted to obtain comprehensive information regarding special-status species and sensitive vegetation communities known or with potential to occur in the plan area. Queries of the CNPS inventory and CNDDB database included the *Santa Maria* and *Twitchell Dam* United States Geological Service (USGS) 7.5-minute topographic quadrangle. The results of these scientific database queries are provided as Appendix B of this Environmental Impact Report (EIR).~~

Grassland

Annual Grassland

Annual grasslands are characterized by open grasslands composed primarily of non-native annual plant species, including wild oats (*Avena fatua*), ripgut brome (*Bromus diandrus*), red brome (*Bromus rubens*), and foxtail barley (*Hordeum murinum*). This vegetation community occurs mostly on flat plains to gently rolling foothills. Species composition depends largely on weather patterns and livestock grazing. Fall rains cause germination of annual plant seeds. Plants grow slowly during the cool winter months, remaining low in stature until spring, when temperatures increase and stimulate more rapid growth. Many wildlife species use this community for foraging, such as black-tailed jackrabbit (*Lepus californicus*), California ground squirrel (*Spermophilus beecheyi*), coyote (*Canis latrans*), and a variety of bird species (CDFW 2025a).

Perennial Grasslands

Perennial grassland habitats occur in two forms in California: coastal prairie, found in areas of northern California under maritime influence, and relics in habitats now dominated by annual grasses and forbs (see Annual Grassland description above). Coastal prairie perennial grassland habitats are dominated by perennial grass species such as California oatgrass, Pacific hairgrass, and sweet vernalgrass. Perennial grassland habitats typically occurs on ridges and south-facing slopes, alternating with forest and scrub in the valleys and on north-facing slopes.

Perennial grasslands provide high-quality habitat for many species, including the common garter snake, western terrestrial garter snake, northern harrier, barn owl, burrowing owl, western kingbird, Say's phoebe, barn swallow, western meadowlark, savannah sparrow, grasshopper sparrow, Townsend mole, coast mole, Botta's pocket gopher, western harvest mouse, California vole, long-tailed vole, and Oregon vole. Perennial grasslands often serve as feeding habitat for the turkey vulture, red-tailed hawk, American kestrel, peregrine falcon, western bluebird, fringe-tailed bat, big brown bat, striped skunk, coyote, black-tailed jackrabbit, brush rabbit, Roosevelt elk, and black-tailed deer (CDFW 2025a).

Pasture

Pasture vegetation is a mix of perennial grasses and legumes that normally provide 100 percent canopy closure. Old or poorly drained pastures may have patches of weeds in excess. The mix of grasses and legumes varies according to management practices such as seed mixture, fertilization, soil type, irrigation, weed control, and the type of livestock on the pasture. Pastures are planted on flat and gently rolling terrain and may be irrigated. Pastures are used by a variety of wildlife

depending upon geographic area and types of adjacent habitats. Ground-nesting birds, including waterfowl, nest in pastures if adequate residual vegetation is present at the onset of the nesting season (CDFW 2025a).

Western Oak Woodland and Savanna

Coastal Oak Woodland

Coast oak woodland is a native vegetation community that consists of deciduous and evergreen hardwoods, typically dominated by coast live oak trees (*Quercus agrifolia*). Coast live oak woodlands are variable, ranging from dense woodlands (sometimes intergrading with mixed evergreen forests) on the more mesic north-facing slopes and canyons, to an open savanna on drier, more exposed slopes where the soils are usually shallower. The understory may range from absent to dense. Typical understory species include shade tolerant shrubs such as native blackberry (*Rubus ursinus*), toyon (*Heteromeles arbutifolia*), and poison oak (*Toxicodendron diversilobum*); and native herbaceous plants such as fiesta flower (*Pholistoma auritum*), miner's lettuce (*Claytonia perfoliata*), and various fern species. Coastal oak woodlands are found in coastal foothills and valleys and provides important habitat for wildlife, including nesting sites, foraging areas for small mammals, and microclimates suitable for amphibians, reptiles, and fungi (CDFW 2025a).

Western Riparian Woodland and Shrubland

Montane Riparian

Montane riparian is a variably vegetated community largely consisting of broad-leaved winter deciduous trees up to 98 feet tall. Such species may include native cottonwood (*Populus* spp.), bigleaf maple (*Acer macrophyllum*), and California bay (*Umbellularia californica*), with a sparse understory. This vegetation community is associated with lakes, ponds, rivers, streams, and springs, where water may be permanent or ephemeral, and generally occurs below 8000 feet above mean sea level. Montane riparian habitats provide food, water, migration and dispersal corridors, and escape, nesting, and thermal cover for an abundance of wildlife (CDFW 2025a).

Valley Foothill Riparian

Valley foothill riparian is a native vegetation community that contains mostly winter deciduous trees, such as native cottonwood (*Populus* spp.), California sycamore (*Platanus racemosa*), and valley oak (*Quercus lobata*). The canopy height can grow up to 98 feet in a mature riparian forest. Typical understory shrub layer species include native California blackberry, blue elderberry (*Sambucus mexicana*), poison oak, and willows (*Salix* spp.). This vegetation community is found in valleys bordered by sloping alluvial fans, slightly dissected terraces, lower foothills, and coastal plains. They are generally associated with low velocity flows, flood plains, and gentle topography. Valleys provide deep alluvial soils and a high water table. The substrate is coarse, gravelly or rocky soils more or less permanently moist. Valley foothill riparian habitats provide food, water, migration and dispersal corridors, and escape, nesting, and thermal cover for an abundance of wildlife (CDFW 2025a).

c. Special Status Species

For the purposes of this analysis, special-status species were considered listed or non-listed special-status species if they were classified as one or more of the following:

- **Listed Special-Status Species**
  - Species listed as threatened or endangered under the Federal Endangered Species Act (FESA), including proposed and candidate species.
  - Species listed as candidate, threatened, or endangered under the California Endangered Species Act (CESA).
  - Plant species protected by the Native Plant Protection Act (NPPA) (State Rare).
- **Non-listed Special-Status Species**
  - Species designated as Fully Protected (FP), Species of Special Concern (SSC), or Watch List (WL) by the CDFW
  - Birds designated as a Bird of Conservation Concern (BCC) by USFWS
  - Sensitive species designated by USFWS
  - Sensitive species designated by the United States Forest Service (USFS)
  - Plants assigned a California Rare Plant Rank of 1 through 4 by the California Native Plant Society (CNPS)
  - Species protected under the Bald and Golden Eagle Protection Act
  - Bats considered by the Western Bat Working Group to be "High" or "Medium" priority
  - Species designated as locally important by the Local Agency and/or otherwise protected through ordinance, local policy, Habitat Conservation Plans (HCPs), or Natural Community Conservation Plans (NCCPs).

Queries of the USFWS's IPaC, CNDDB, and CNPS's online Inventory of Rare and Endangered Plants of California (CRPR) were conducted to obtain comprehensive information regarding special-status species and sensitive vegetation communities known or with potential to occur in the plan area. Queries of the CNPS inventory and CNDDB database included the *Santa Maria* and *Twitchell Dam* United States Geological Service (USGS) 7.5-minute topographic quadrangle. The results of these scientific database queries are provided as Appendix ~~B~~ C of this Environmental Impact Report (EIR).

Special-Status Plant Species

Based on the database queries and literature review, a total of 17 special-status plant species were evaluated for their potential to occur within the plan area (Appendix ~~B~~C). Of these species, 13 were identified with low potential to occur within the plan area. Appendix ~~B~~C shows the special-status plant species and habitat requirements for each species within the vicinity of the plan area.

The 13 special-status plant species with the potential to occur in the plan area are listed below with their federal and/or State special-status designation:

- Miles' milk-vetch (*Astragalus didymocarpus var. milesianus*) – CRPR 1B.2
- California jewelflower (*Caulanthus californicus*) – Federally Endangered, State Endangered, CRPR 1B.1
- La Graciosa thistle (*Cirsium loncholepis*) – Federally Endangered, State Threatened, CRPR 1B.1

- Salt marsh bird's-beak (*Cordylanthus maritimus ssp. Maritimus*) – Federally Endangered, State Endangered, CRPR 1B.2
- Paniculate tarplant (*Deinandra paniculata*) – CRPR 4.2
- Dune larkspur (*Delphinium parryi ssp. blochmaniae*) – CRPR 1B.2
- Blochman's leafy daisy (*Erigeron blochmaniae*) – CRPR 1B.2
- Suffrutescent wallflower (*Erysimum suffrutescens*) – CRPR 4.2
- Mesa horkelia (*Horkelia cuneata var. puberula*) - CRPR 1B.1, USFS Sensitive
- Blushing layia (*Layia erubescens*) – CRPR 1B.2
- Large-flowered leptosiphon (*Leptosiphon grandifloras*) – CRPR 4.2
- Southern curly-leaved monardella (*Monardella sinuata ssp. sinuate*) – CRPR 1B.2
- Spreading navarretia (*Navarretia fossalis*) – Federally Threatened

Special-Status Wildlife Species

Based on the database queries and literature review, a total of 31 special-status invertebrate, fish, amphibian, reptile, bird, and mammal species were evaluated for their potential to occur within the plan area (Appendix ~~B~~C). Of these species, 13 were identified with low potential to occur within the plan area, and 9 were identified with a moderate potential to occur within the plan area. Appendix B shows the special-status wildlife species and habitat requirements for each species within the vicinity of the plan area.

The 22 special-status wildlife species with low to moderate potential to occur in the plan area are listed below with their federal and/or State special-status designation:

- Vernal pool fairy shrimp (*Branchinecta lynchi*) – Federally Threatened
- Monarch butterfly (*Danaus plexippus plexippus pop. 1*) – Federal Proposed Threatened, USFS Sensitive
- California tiger salamander – Santa Barbara County DPS (*Ambystoma californiense pop. 2*) – Federally Endangered, State Threatened, CDFW Watch List
- Arroyo toad (*Anaxyrus californicus*) – Federally Endangered, CDFW Species of Special Concern
- California red-legged frog (*Rana draytonii*) – Federally Threatened, State Threatened, CDFW Species of Special Concern
- Western spadefoot (*Spea hammondii*) – Federal Proposed Threatened, CDFW Species of Special Concern
- Southwestern pond turtle (*Actinemys pallida*) – Federal Proposed Threatened, CDFW Species of Special Concern, USFS Sensitive
- Northern California legless lizard (*Anniella pulchra*) – Federal Proposed Threatened, CDFW Species of Special Concern, USFS Sensitive
- Coast horned lizard (*Phrynosoma blainvillii*) - CDFW Species of Special Concern
- Tricolored blackbird (*Agelaius tricolor*) – State Threatened, CDFW Species of Special Concern, USFWS BCC
- Golden eagle (*Aquila chrysaetos*) - CDFW Fully Protected, CDFW Watch List
- Burrowing owl (*Athene cunicularia*) – State Candidate, CDFW Species of Special Concern, USFWS BCC
- Marbled murrelet (*Brachyramphus marmoratus*) – Federally Threatened, State Endangered

- Northern harrier (*Circus hudsonius*) - CDFW Species of Special Concern, USFWS BCC
- Bald eagle (*Haliaeetus leucocephalus*) – Federally Designated, State Endangered, CDFW Fully Protected, USFS Sensitive
- California gull (*Laurs californicus*) - CDFW Watch List, USFWS BCC
- Yellow-billed magpie (*Pica nuttalli*) - USFWS BCC
- Black skimmer (*Rynchops niger*) - CDFW Species of Special Concern, USFWS BCC
- Lawrence's goldfinch (*Spinus lawrencei*) - USFWS BCC
- Least Bell's vireo (*Vireo bellii pusillus*) – Federally Endangered, State Endangered
- Pallid bat (*Antrozous pallidus*) - CDFW Species of Special Concern, USFS Sensitive, Western Bat Working Group "High" priority
- American badger (*Taxidea taxus*) - CDFW Species of Special Concern

d. Nesting Birds

Suitable nesting sites for avian species protected by the federal Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFGC), including shrubs, trees, man-made structures, and the ground surface occur throughout the plan area. Some species prefer vegetation for nesting, including ornamental vegetation and some species can be found nesting in man-made structures, such as power poles or the eaves of buildings. Nesting birds may occur during the breeding season (generally February 1 through August 31 but beginning January 1 for some raptor species).

e. Sensitive Communities and Critical Habitat

Sensitive Communities

The CNDDB identifies one environmentally sensitive natural community in the city, Southern Vernal Pool, located west of the Santa Maria Public Airport (City of Santa Maria 2020).

Critical Habitat

As shown in Figure 4.3-3, according to the USFWS, designated critical habitat for California tiger salamander (*Ambystoma californiense*) exists in the southernmost extents of City limits, south of the Santa Maria Airport. Designated critical habitat for La Graciosa thistle exists within the Sphere of Influence/General Plan Area. Designated critical habitat for steelhead trout exists through a small portion of the northeastern-most extents of City limits. Designated critical habitat for California red-legged frog exists along the southernmost border of the Sphere of Influence/General Plan Area. Designated critical habitat for Lompoc yerba santa exists south of the Sphere of Influence/General Plan Area (USFWS 2025b).

f. Wildlife Movement Corridors

Wildlife movement corridors, or habitat linkages, are generally defined as connections between habitat patches that allow for physical and genetic exchange between otherwise isolated animal populations. Such linkages may serve a local purpose, such as providing a linkage between foraging and denning areas, or they may be regional in nature. Some habitat linkages may serve as migration corridors, wherein animals periodically move away from an area and then subsequently return. Others may be important as dispersal corridors for young animals. A group of habitat linkages in an area can form a wildlife corridor network.

The habitats within the linkages do not necessarily need to be the same or of the same quality as the habitats that are being linked. Rather, the linkage merely needs to contain sufficient cover and forage to allow temporary inhabitation by ground-dwelling species. Typically, habitat linkages are contiguous strips of natural areas, though dense plantings of landscape vegetation can be used by certain disturbance-tolerant species. Depending upon the species using a corridor, specific physical resources (such as rock outcroppings, vernal pools, or oak trees) may need to be located within the habitat link at certain intervals to allow slower-moving species to traverse the link. For highly mobile or aerial species, habitat linkages may be discontinuous patches of suitable resources spaced sufficiently close together to permit travel along a route in a short period of time. Migration corridors can be bordered on either site by urban land uses, and within the City limits these corridors often include barriers to movement such as developed areas and roads.

As shown in Figure 4.3-4, CDFW defines the area within the plan area as having "Limited Connectivity Opportunity". A small area of "Connections with Implementation Flexibility," which has connectivity importance, but has not been identified as a channelized area, species corridor, or habitat linkage is present in the southern extents of the Sphere of Influence/General Plan Area. CDFW does not identify any essential habitat connectivity areas within the City's Sphere of Influence (CDFW 2025b). However, there is a potential that the Santa Maria River is used by wildlife to access habitats in the Sierra Madre and San Rafael Mountains (City of Santa Maria 2020).

4.3.2 Regulatory Setting

a. Federal Regulations

Federal Endangered Species Act

The FESA of 1973 and subsequent amendments provide for the conservation of endangered and threatened species, and the ecosystems upon which they depend. The FESA is intended to prevent the unlawful "take" of listed fish, wildlife, and plant species. Section 9(a)(1)(B) specifically states take of species listed as threatened or endangered is unlawful. Take is defined as any action that would harass, harm, pursue, hunt, wound, shoot, kill, trap, capture, or collect any threatened or endangered species. Section 10 of the FESA allows the USFWS to issue incidental take permits if take of a listed species may occur during otherwise lawful activities. Section 10(a)(1)(B) requires a Habitat Conservation Plan for an incidental take permit on non-federal lands. Section 7 of the FESA requires federal agencies to aid in the conservation of listed species, and to ensure that the activities of federal agencies will not jeopardize the continued existence of listed species or adversely modify designated critical habitat. The USFWS and NOAA are responsible for administration of the FESA and have regulatory authority over federally listed species.

Migratory Bird Treaty Act

The MBTA makes it unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, or kill migratory birds, and prohibits the removal of nests occupied by migratory birds. The USFWS has regulatory authority for the MBTA.

Clean Water Act

The United States Army Corps of Engineers (USACE), under provisions of Section 404 of the Clean Water Act (CWA) and USACE implementing regulations, has jurisdiction over the placement of dredged or fill material into "waters of the United States." Congress enacted the CWA "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." In practice, the boundaries of certain waters subject to USACE jurisdiction under Section 404 have not been fully defined. Previous regulations codified in 1986 defined "waters of the United States" as traditional navigable waters, interstate waters, all other waters that could affect interstate or foreign commerce, impoundments of waters of the United States, tributaries, the territorial seas, and adjacent wetlands.

USACE jurisdictional limits are typically identified by the Ordinary High Water Mark (OHWM) or the landward edge of adjacent wetlands, where present. The OHWM is the "line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding area" (33 Code of Federal Regulations 328.3).

The USACE defines wetlands as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3). The USACE's delineation procedures identify wetlands in the field based on indicators of three wetland parameters: hydrophytic vegetation, hydric soils, and wetland hydrology.

Fish and Wildlife Coordination Act

The USFWS also has responsibility for project review under the Fish and Wildlife Coordination Act. This statute requires that all federal agencies consult with USFWS, NOAA Fisheries, and the State's wildlife agency (CDFW) for activities that affect, control, or modify streams and other water bodies. Under the authority of the Fish and Wildlife Coordination Act, USFWS, NOAA Fisheries, and CDFW review applications for permits issued under Section 404 and provide comments about potential environmental impacts.

b. State Regulations

California Endangered Species Act

The CDFW is responsible for administration of the CESA. For projects that may affect both a State and federal listed species, compliance with the FESA will satisfy the CESA, provided the CDFW determines that the federal incidental take authorization is consistent with the CESA.

"Take" is defined in CFGC Section 86 as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." The CESA allows for take incidental to otherwise lawful activities under CFGC Section 2081. Project proponents wishing to obtain incidental take permits can do so through a permitting process outlined in California Code of Regulations (CCR) Section 783. Additionally, some sensitive mammals and birds are protected by the state as Fully Protected Mammals or Fully Protected Birds, as described in the CFGC, Sections 4700 and 3511, respectively.

Projects that may result in a take of a California listed species require a take permit under the CESA. The federal and State acts lend protection to species considered rare enough by the scientific

community and trustee agencies to warrant special consideration, particularly with regard to protection of isolated populations, nesting or den locations, communal roosts, and other essential habitat. Unlike the FESA, the CESA prohibits the take of not just listed endangered or threatened species, but also candidate species (species petitioned for listing).

The CESA defines an endangered species as:

> …a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease.

A threatened species is defined as:

> …a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the commission as rare on or before January 1, 1985 is a threatened species.

Candidate species are defined as:

> …a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to either list.

Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Game Commission. Unlike the FESA, CESA does not include listing provisions for invertebrate species. Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened or endangered species by stating:

> …no person shall import into this State, export out of this State, or take, possess, purchase, or sell within this State, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided.

California Fish and Game Code - Nesting Bird Protection

According to CFGC Section 3503, it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird (except English sparrows [*Passer domesticus*] and European starlings [*Sturnus vulgaris*]). Sections 3503 and 3513 prohibit the taking of specific birds, their nests, eggs, or any portion thereof during the nesting season. Section 3503.5 specifically protects birds in the orders Falconiformes and Strigiformes (birds-of-prey). Section 3513 overlaps with the federal MBTA, prohibiting the take or possession of any migratory nongame bird.

California Native Plant Protection Act

The NPPA was enacted in 1977 and allows the California Fish and Wildlife Commission to designate plants as rare or endangered. Currently, 64 species, subspecies, and varieties of plants are protected as rare under the NPPA. The NPPA prohibits take of endangered or rare native plants but includes some exceptions for agricultural and nursery operations; emergencies; and after properly notifying

CDFW for vegetation removal from canals, roads, and other sites; changes in land use; and in certain other situations. Effective in 2015, CDFW promulgated regulations (14 CCR 786.9) under the authority of the NPPA, establishing that the CESA permitting procedures (CFG Code Section 2081) would be applied to plants listed under the NPPA as "Rare." With this change, there is little practical difference between regulations and protocols for plants listed under CESA and those listed under the NPPA.

Clean Water Act Section 401, Porter-Cologne Water Quality Control Act

The State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCBs) have jurisdiction over “waters of the State,” which are defined as any surface water or groundwater, including saline waters, within the boundaries of the state (California Water Code sec. 13050(e)). These agencies also have responsibilities for administering Section 401 of the CWA. In addition, where Federal jurisdiction is not asserted (for example, due to a lack of connectivity to a Relatively Permanent Waters and Traditional Navigable Waters), RWQCB assert jurisdiction over “waters of the State” pursuant to Section 13263 of the Porter-Cologne Water Quality Control Act, which are defined as any surface water or groundwater, including saline waters, within the boundaries of the State. In this event, the SWRCB may issue general Waste Discharge Requirements regarding discharges to “isolated” waters of the State if limiting criteria are not exceeded (Water Quality Order No. 2004-0004-DWQ, Statewide General Waste Discharge Requirements for Dredged or Fill Discharges to Waters Deemed by the USACE to be Outside of Federal Jurisdiction) or project-specific Waste Discharge Requirements.

The SWRCB and RWQCBs have not established regulations for field determinations of waters of the state except for wetlands. In many cases the RWQCBs interpret the limits of waters of the State to be bounded by the OHWM unless isolated conditions or ephemeral waters are present. However, in the absence of statewide guidance, each RWQCB may interpret jurisdictional boundaries within their region and the SWRCB has encouraged applicants to confirm jurisdictional limits with their RWQCB before submitting applications. As determined by the RWQCB, waters of the State may include riparian areas or other locations outside the OHWM, leading to a larger jurisdictional area over a given water body compared to the USACE.

Procedures for defining wetland waters of the State pursuant to the SWRCB’s State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State went into effect May 28, 2020. The SWRCB defines an area as wetland if, under normal circumstances:

> the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and the area’s vegetation is dominated by hydrophytes or the area lacks vegetation.

The SWRCB’s Implementation Guidance for the Wetland Definition and Procedures for Discharges of Dredge and Fill Material to Waters of the State (2020), states that waters of the U.S. and waters of the State should be delineated using the standard USACE delineation procedures, taking into consideration that the methods shall be modified only to allow for the fact that a lack of vegetation does not preclude an area from meeting the definition of a wetland.

California Fish and Game Code Section 1600 et seq.

Pursuant to CFGC Section 1600, CDFW has authority over all perennial, intermittent, and ephemeral rivers, streams, and lakes in the state, and requires any person, state or local governmental agency, or public utility to notify the CDFW before beginning any activity that would "substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake" that supports fish or wildlife resources.

A stream is defined as a "body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (CCR, Title 14 Section 1.72). A Lake or Streambed Alteration Agreement may be required for any project that would result in an adverse impact to a river, stream, or lake. CDFW jurisdiction typically extends to the top of the bank and out to the outer edge of adjacent riparian vegetation if present. However, CDFW can take jurisdiction over a body of flowing water and the landform that conveys it, including water sources and adjoining landscape elements that are byproducts of and affected by interactions with flowing water without regard to size, duration, or the timing of flow.

CDFW Special Animals List

Special-status wildlife species are those species included on the CDFW "Special Animals" list. "Special Animal" is a general term that refers to all the taxa the CNDDB is interested in tracking, regardless of their legal or protection status (CDFW 2025c). The CDFW considers the taxa on this list to be those of greatest conservation need. The species on this list generally fall into one or more of the following categories:

- Officially listed or proposed for listing under the CESA and/or FESA
- State or Federal candidate for possible listing
- Taxa that meet the criteria for listing, even if not currently included on any list, as described in California Environmental Quality Act (CEQA) Guidelines Section 15380
- Taxa considered by the Department to be a Species of Special Concern
- Taxa that are biologically rare, very restricted in distribution, declining throughout their range, or have a critical vulnerable stage in their life cycle that warrants monitoring
- Populations in California that may be on the periphery of a taxon's range but are threatened with extirpation in California

c. Local Regulations

Santa Maria Municipal Code

The City of Santa Maria Municipal Code Chapters 8-8 (Urban Forestry), 8-12A (Stormwater Runoff Pollution Prevention), 9-68 (Flood Damage Prevention), and 12-44 (Landscape Standards) implement measures which protect biological resources.

Chapter 8-8 implements the City's Urban Forestry Program, and provides a comprehensive urban forest management strategy which protects and enhances the City's urban forest and sets forth the following requirements related to trees within the City:

- Requires that one tree be planted for every forty feet of street frontage.
- Enforces the protection of City managed trees requires tree removals to be approved by the Recreation and Parks Commission.
- Requires provisions for tree protection and replacement during construction activities.
- Outlines the requirements for replacement trees, including that if healthy trees are removed, they are replaced at a two to one ratio according to the City's Landscape and Irrigation Standards (2007).
- Protects historic and heritage trees.

Chapter 8-12A implements requirements designed to reduce substantial adverse effects to water quality in the City. These include the following:

- Implementation of construction and operational Best Management Practices (BMPs) to reduce potential pollutants and protect water quality.
- Compliance with National Pollutant Discharge Elimination System (NPDES) stormwater discharge permits.
- Prohibition of discharge, modification, deposition, construction, or placement of material into a water course.

Chapter 9-68 implements requirements designed to minimize and prevent flood damage. These include:

- Restrictions around the alteration of natural floodplains, stream channels, and natural protective barriers.
- Minimizing filling, grading, dredging, and other development which may increase flood damage.
- Preventing and regulating the construction of flood barriers that would unnaturally divert floodwaters.
- Requires development permits and sets construction standards for projects within flood hazard or floodplains.

Chapter 12-44 implements landscaping design standards intended to preserve trees. These include:

- Listing of existing trees in excess of six inches in diameter and existing street trees within site planning documents.
- Restrictions on allowed grading alterations within three inches of a tree trunk.
- Requires approvals for tree removal and tree replacement

4.3.3 Impact Analysis

a. Significance Thresholds and Methodology

Methodology

The assessment of potential impacts to biological resources were informed based on a review of readily available information from the USFWS NWI, USFWS IPaC, CDFW CNDDB, the NOAA Protected Resources Application, the City of Santa Maria Existing Conditions Report (2020), and CDFW vegetation datasets. As a programmatic document, this EIR presents an assessment of the potential for adoption of the plan to result in significant impacts to biological resources. Because the EIR is a long-term document intended to guide actions for many years into the future, this analysis relies on program-level and qualitative evaluation.

The adoption of the 2045 General Plan does not include physical development that could directly impact biological resources. However, implementation of the 2045 General Plan would facilitate development within the City's SOI. Each proposed project under the 2045 General Plan would require subsequent analysis to evaluate project-specific impacts to biological resources, significance, need for project-specific mitigation, and any subsequent discretionary permits or coordination with resource agencies (e.g., USFWS, USACE, CDFW, RWQCB) that may be required.

Significance Thresholds

Based on Appendix G of the CEQA Guidelines, a project may be deemed to have a significant impact on biological resources if it would:

1. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;
2. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;
3. Have a substantial adverse effect on state or federally protected wetlands (including but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
4. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
5. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or
6. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Impact BIO-1 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE COULD HAVE A SUBSTANTIAL ADVERSE EFFECT ON SPECIAL-STATUS SPECIES, EITHER DIRECTLY OR AS A RESULT OF HABITAT MODIFICATION. IMPLEMENTATION OF FEDERAL, STATE, AND LOCAL REGULATIONS AND POLICIES, AS WELL AS MITIGATION MEASURES BIO-1(A) THROUGH BIO-1(K) WOULD ENSURE THAT IMPACTS FROM DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE ON CANDIDATE, SENSITIVE, OR SPECIAL-STATUS SPECIES WOULD BE LESS THAN SIGNIFICANT. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED.

As shown in Figure 4.3-1, the City is primarily developed; however, the plan area contains grassland, chapparal, riparian, wetland, and oak woodland areas which could serve as habitat for special status species. As discussed in Section 4.3.1, *Setting*, there are 13 special status plant species and 22 special status animal species with potential to occur within the plan area. Critical habitat for California tiger salamander is also present within the plan area. Potentially significant effects on candidate, sensitive, or special status species would occur if temporary disturbance during construction or permanent development facilitated by the plan would result in incremental direct loss of habitat, fragmentation of larger open areas and wildlife corridors, or disturbance of special status wildlife or vegetation species.

The 2045 General Plan Update includes the following policies which would minimize impacts to protected biological resources and preserve habitats that may support special-status species and sensitive habitats, including nesting migratory birds:

Policy COS-1.1: Natural habitat and wildlife corridors. Protect and, to the extent feasible, expand natural habitat and wildlife corridor areas, natural wetlands, and other natural lands throughout the city and Sphere of Influence.

Policy COS-1.3: Natural biodiversity. Increase natural biodiversity through the reintroduction of native species, removal of non-native, invasive species, and proper sustainable maintenance of vegetated areas.

Policy COS-1.5: Endangered, threatened, and special status species. Minimize potential impacts of development on federal or ~~s~~State endangered and threatened species and non-listed special status species through the development and permit review process. Condition development projects to avoid impacts to these species, to the greatest extent feasible.

Policy COS-4.1: Santa Maria River protection. Protect and enhance the beneficial uses of the Santa Maria River to support essential community and environmental needs, including municipal and domestic water supply, agricultural supply, and groundwater recharge.

Policy COS-4.3: Groundwater contamination. Minimize groundwater contamination from current and previous oil and gas operations.

Policy COS-5.3: Fugitive dust emissions. Mitigate air pollutants and fugitive dust emissions resulting from construction and demolition activities by requiring the use of best management practices.

Policy PFS-2.3: Groundwater. Improve the long-term recharge of the Santa Maria Valley Groundwater Basin by retaining natural watershed areas, developing regional recharge basins, and minimizing impervious surfaces in new development.

~~**Policy PFS-2.6: Contaminant mitigation.** Manage contaminated sites to protect natural systems from groundwater infiltration and stormwater runoff.~~

Policy S-3.2: Agricultural runoff reduction. Work with the County of Santa Barbara to reduce off-site and urban flooding caused by agricultural runoff.

Special-Status Plants

Thirteen special-status plants have been documented in the plan area, including: Miles' milk-vetch, California jewelflower, La Graciosa thistle, salt marsh bird's-beak, paniculate tarplant, dune larkspur, Blochman's leafy daisy, Suffrutescent wallflower, Mesa horkelia, blushing layia, large-flowered leptosiphon, southern curly-leaved monardella, and spreading navarretia.

While these 13 special-status plants have a low potential to occur within the plan area, development facilitated by the plan could result in direct impacts to special-status plant species through vegetation removal, soil disturbance, and habitat modification during construction activities, potentially leading to the loss of individuals and degradation of habitat. Development facilitated by the plan could also result in permanent loss of habitat. Therefore, impacts to special-status plant species would be potentially significant.

Special-Status Wildlife

Thirteen special-status wildlife species were identified with low potential to occur within the plan area, and nine were identified with a moderate potential to occur within the plan area. Those with low potential to occur include southwestern pond turtle, tricolored blackbird, golden eagle, marbled murrelet, northern harrier, bald eagle, California gull, yellow-billed magpie, black skimmer, Lawrence's goldfinch, least Bell's vireo, pallid bat, and American badger. Those with moderate potential to occur include vernal pool fairy shrimp, monarch butterfly, California tiger salamander, Arroyo toad, California red-legged frog, western spadefoot, Northern California legless lizard, coast horned lizard, and burrowing owl.

Reptiles

Coast horned lizard and northern California legless lizard have a moderate potential to occur within the plan area, and southwestern pond turtles have low potential to occur within the plan area. Direct impacts to these species could occur if individuals are present in work areas during construction of development facilitated by the plan. Direct impacts to special-status reptile species could include injury or death as a result of individuals being crushed or buried by project vehicles, equipment, or displaced soil, entrapment of individuals in excavation areas, disturbance of individuals by construction-related noise and vibration (resulting from grading or other construction activities), impacts to vegetation used for food and shelter, reduction of refugia habitats, and accidental destruction of active burrows by construction vehicles or equipment. Development facilitated by the plan could also result in permanent loss of suitable habitat for these species. Potential indirect impacts resulting from development facilitated by the plan include the introduction or spread of invasive plant species, fugitive dust, standing water or food waste, and soil compaction that hinders burrowing. Indirect impacts to aquatic habitat for southwestern pond turtle include erosion, sedimentation, fire, and runoff of hazardous materials. Therefore, impacts to

coast horned lizard, northern California legless lizard, and southwestern pond turtle would be potentially significant.

Mammals

Bats have the potential to roost in buildings and trees, including street trees within the plan area. Impacts to pallid bats could occur if bat roosts are present in trees or buildings proposed for removal or in the vicinity of disturbance in undeveloped areas. These impacts could result in direct mortality or abandonment of maternal colonies, if present. Development facilitated by the plan could also result in permanent loss of suitable habitat. Impacts to pallid bat would be potentially significant.

If American badgers are present in disturbance areas or on access roads during construction of development facilitated by the plan, direct impacts to the species could occur; including injury or death resulting from vehicle collision, damage or destruction of occupied burrows, disturbance from construction noise/vibration, and loss or degradation of foraging habitat. Direct impacts may occur if disturbance at maternity dens resulting from construction noise/vibration or human presence negatively affects pup-rearing. The species may be indirectly impacted by impacts to its habitat including the spread of invasive plants, fugitive dust (resulting from grading or other construction activities), erosion, sedimentation, and runoff of hazardous materials. Additionally, soil compaction in work areas may reduce habitat for prey species. Development facilitated by the plan could also result in permanent loss of suitable habitat. Impacts to American badgers would be potentially significant.

Invertebrates

Monarch butterflies have the potential to overwinter in eucalyptus and pine-cypress groves throughout the plan area. Development facilitated by the plan could result in direct impacts to monarch butterfly if roosts are present in trees proposed for removal or in the vicinity of disturbance in undeveloped areas. Development facilitated by the plan could result in additional direct impacts to monarch butterflies could include disturbance of individuals by construction-related noise and vibration (resulting from grading or other construction activities), impacts to vegetation used for food and shelter, and reduction of refugia habitats. The species may be indirectly impacted by development facilitated by the plan due to habitat impacts, including the spread of invasive plants and fugitive dust (resulting from grading or other construction activities). Impacts to monarch butterfly would be potentially significant.

Vernal pool fairy shrimp are a federally threatened species with moderate potential to occur within the plan area. Suitable vernal pool habitat is present in the plan area near the Santa Maria Airport. If vernal pool fairy shrimp are present during construction and development facilitated by the proposed project, these species may be directly impacted through injury or mortality of individuals resulting from project vehicles or equipment, and habitat loss from leveling out or filling in the wetlands. Indirect impacts to vernal pool fairy shrimp could result from potential stormwater runoff from development activities entering potential suitable habitat during and post- construction. Stormwater runoff from development facilitated by the plan may result in degraded water quality and other essential water conditions that are required for species survival. Impacts to vernal pool fairy shrimp would be potentially significant.

Crotch's bumble bee is listed as a CDFW state candidate (SC) endangered species. The species inhabits various habitats in California between San Diego and Redding, including open grassland, shrublands, and chaparral in semi-urban settings. Crotch's bumble bee prefers food plant genera

including Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum. The plan area is within the known range of this species, and suitable habitat and food genera are present in the vicinity of the plan area. While there are no CNDDB observations of this species in the plan area, based on the presence of suitable habitat as well as nearby occurrences and their transitory nature, this species has the potential to occur in the plan area. Impacts to Crotch's bumble bee would be potentially significant.

Birds

Construction activities associated with development facilitated by the plan could potentially result in impacts to birds and raptors, including tricolored blackbird, golden eagle, marbled murrelet, northern harrier, bald eagle, California gull, yellow-billed magpie, black skimmer, Lawrence's goldfinch, and least Bell's vireo. Development facilitated by the plan may result in direct impacts if they are disturbed by the noise and visual presence of personnel or equipment in construction areas or increased traffic in the vicinity (which may result in collisions). Indirect impacts resulting from development facilitated by the plan may include the introduction or spread of invasive plants, fugitive dust (resulting from grading or other construction activities), erosion, sedimentation, and the runoff of hazardous materials, all of which could degrade the quality of bird habitat (especially in riparian habitat areas) and the quality of foraging habitat. These impacts would be potentially significant.

If burrowing owls are present in disturbance areas when construction activities associated with development facilitated by the plan occur, the species may be directly impacted through injury or mortality of individuals resulting from collisions with construction vehicles or equipment; destruction of occupied burrows and/or active nest sites; and disturbance from increased vehicle traffic, noise at work sites (resulting from grading, helicopter activity, or other construction activities), and human presence that could result in an interruption of normal behaviors or nest abandonment. The species may also be subject to direct impacts due to the loss or degradation of foraging habitat in work areas resulting from vegetation clearing, ground disturbance, and/or permanent development. Development facilitated by the plan may also have indirect impacts to burrowing owl, including introduction or spread of invasive plants, fugitive dust (resulting from grading or other construction activities), erosion, sedimentation, and the runoff of hazardous materials which could indirectly impact burrowing owl by decreasing habitat value. In addition, development facilitated by the project may result in construction activities which increase soil compaction, which may impede burrow creation. Impacts to burrowing owl would be potentially significant.

If nesting birds are present at individual development sites, or immediate vicinity of individual sites, development facilitated by the plan could result in direct mortality through removal of active nests or disturbance levels that cause nest abandonment. Nesting birds and raptors have the potential to nest on buildings, in shrubs and trees, in rocky outcrops, and on bare ground throughout the City. Vegetation, including street trees, in the City can provide refuge cover from predators, perching sites, and favorable nesting habitat. Direct impacts to nesting birds may occur from disturbance due to increased noise, and human presence could result in nest abandonment or otherwise reduce nesting success due to development facilitated by the plan. Vehicle strikes resulting in injury or mortality may increase with additional vehicles and equipment being operated in the plan area. Development facilitated by the plan may also have indirect impacts to nesting birds, including fugitive dust generated by road grading, which can accumulate on surrounding vegetation and degrade the quality of nesting and foraging habitats for birds, and vegetation trimming, which may temporarily reduce the quantity and quality of habitat by decreasing vegetative cover. Development

facilitated by the plan may result in erosion and sedimentation, fire, hazardous materials, and invasive non-native plants which can also indirectly impact nesting and foraging habitats. Impacts to migration or foraging habitats during construction activities facilitated by the plan may have an indirect effect on birds that rely on these habitats but nest elsewhere.

Future development facilitated by the plan would be required to comply with the requirements of the MBTA and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code, which include obtaining prior authorization by the USFWS before the take of a protected migratory bird species occurs, subject to USFWS requirements, and prohibiting the take, possession, or destruction of nests or eggs. However, existing City regulations do not mandate procedures to ensure compliance with the requirements of the MBTA and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code. Therefore, it is possible development facilitated by the plan could result in disturbance to birds or raptors and potentially violate the MBTA and Sections 3503, 3503.5, and/or 3513 of the California Fish and Game Code. As a result, impacts to nesting birds are potentially significant.

Amphibians

California tiger salamander, Arroyo toad, California red-legged frog, and western spadefoot have moderate potential to occur within the plan area. The plan area contains USFWS designated critical habitat for California tiger salamander (USFWS 2025). California tiger salamanders require access to both aquatic and upland habitat throughout their life cycle. They use standing bodies of fresh water, like ponds, vernal pools and other ephemeral or permanent water bodies for breeding, and require access to upland habitat that contains small animal burrows or underground hideaways for shelter and protection from predators and desiccation during nonbreeding periods (USFWS 2025b). Where suitable habitats are present, development facilitated by the plan may result in direct impacts from individuals being crushed by project vehicles and equipment, buried by displaced soil, or trapped in excavations as well as direct impacts from the loss or degradation of low-lying areas where pools form during rain events and upland burrowing habitat. If development facilitated by the plan were to occur within wetlands, streams, or upland habitat areas, impacts to California tiger salamander would be potentially significant.

Suitable wash and river habitats for Arroyo toad are present in the plan area, such as along the Santa Maria River. A CDFW designated critical habitat area for California red legged frog exists on the border of the southernmost extents of the Sphere of Influence/General Plan Area. Suitable grasslands and vernal pool habitat for western spadefoot are present in the plan area. Where suitable habitats are present for these species, development facilitated by the plan may result in direct impacts from individuals being crushed by project vehicles and equipment, buried by displaced soil, or trapped in excavations as well as direct impacts from the loss or degradation of low-lying areas where pools form during rain events and upland burrowing habitat. Direct impacts to these species would be potentially significant.

Indirect impacts to special status species which utilize riparian corridors and other aquatic habitat (i.e. southwestern pond turtle, western spadefoot, California tiger salamander, Arroyo toad, California red-legged frog) could result from future development facilitated by the plan if suitable habitats are indirectly impacted by runoff of sediment and hazardous materials from disturbance areas, resulting in degraded water quality, or noise and vibration (resulting from grading or other construction activities). Construction activities that would disturb one or more acres of land are subject to the NPDES Construction General Permit. Compliance with the Construction General Permit requires the development of a Stormwater Pollution Prevention Plan (SWPPP) developed by a certified Qualified SWPPP Developer. The SWPPP includes project-specific BMPs to control

erosion, sediment release, and otherwise reduce the potential for discharge of pollutants from construction into stormwater. Typical BMPs include, but are not limited to, installation of silt fences, erosion control blankets, and anti-tracking pads at site exits to prevent off-site transport of soil materials. Section 8-12A.07 of the Santa Maria Municipal Code requires compliance with NPDES permit requirements. Section 8-12A.08 requires any construction activities to implement appropriate BMPs to prevent the discharge of sediment and potential pollutants.

Development facilitated by the plan would also be subject to the provisions of federal and State regulations protecting biological and water resources, including, but not limited to, FESA, CESA, CWA, and the NPPA. These regulations include requirements for biological studies where potential habitat exists, identification of potential jurisdictional waters, and consultation with applicable regulatory agencies where protected biological resources may occur. Compliance with these regulatory requirements would minimize indirect impacts to special status species that utilize aquatic and riparian habitat. Therefore, the plan would result in less than significant indirect impacts to special status species within aquatic or riparian habitat.

Mitigation Measures

BIO-1(a) Biological Resources Screening and Assessment

For development facilitated by the plan within undeveloped parcels, prior to construction activities and if determined necessary based on preliminary review conducted by City Staff, the City shall require project applicants to engage a qualified biologist (having the appropriate education and experience level) to perform a baseline Biological Resources Screening and Assessment to determine whether projects proposed within undeveloped parcels have any potential to impact special-status biological resources, inclusive of special-status plants and animals, sensitive vegetation communities (including vernal pools and other wetlands), and critical habitat. If it is determined that the project has no potential to impact biological resources, no further action is required. If the project would have the potential to impact biological resources, prior to construction, a qualified biologist shall conduct a project-specific biological analysis to document the existing biological resources within a project footprint plus a minimum buffer of 500 feet around the project footprint, as is feasible, and to determine the potential impacts to those resources. The project-specific biological analysis shall evaluate the potential for impacts to all biological resources including, but not limited to special-status species, nesting birds, wildlife movement, sensitive plant communities, critical habitats, and other resources judged to be sensitive by local, state, and/or federal agencies. If the project would have the potential to impact these resources, the following mitigation measures (Mitigation Measures BIO-1[b] through BIO-1[k]) shall be incorporated, as applicable, to reduce impacts to a less than significant level. Pending the results of the project-specific biological analysis, design alterations, further technical studies (e.g., protocol surveys) and consultations with the USFWS, CDFW, and/or other local, state, and federal agencies may be required. Note that specific surveys described in the mitigation measures below may be completed as part of the project-specific biological analysis where suitable habitat is present.

BIO-1(b) Special-status Plant Species Surveys

For development facilitated by the plan where the project-specific Biological Resources Screening and Assessment (Mitigation Measure BIO-1[a]) determines that there is potential for significant impacts to federally or state-listed plants or regional population level impacts to species with a CRPR of 1B or 2B from project development, a qualified biologist shall complete surveys for special-status plants prior to any vegetation removal, grubbing, or other construction activity (including

staging and mobilization). The surveys shall be floristic in nature and shall be seasonally timed to coincide with the target species. All plant surveys shall be conducted by a qualified biologist during the blooming season prior to development permit approval. All special-status plant species identified on site shall be mapped onto a site-specific aerial photograph or topographic map with the use of Global Positioning System unit. Surveys shall be conducted in accordance with the most current protocols established by the CDFW, USFWS, and the local jurisdictions if said protocols exist. A report of the survey results shall be submitted to the City, and the CDFW and/or USFWS, as appropriate, for review and/or approval.

If special-status plants are not found during special-status plant surveys, no further action is required. If federally- and/or state-listed individuals and/or CRPR 1B or 2B plant populations are found during special-status plant surveys, the Mitigation Measures BIO-1(c) and BIO-1(d) shall be implemented.

BIO-1(c) Special-status Plant Species Avoidance, Minimization, and Mitigation

If federally-listed and/or state-listed individuals, and/or CRPR 1B or 2 plant populations are found during special-status plant surveys (pursuant to Mitigation Measure BIO-1[b]) and would be directly impacted by development, then the project shall be re-designed to avoid impacting listed plant species or CRPR 1B or 2 populations, where feasible. Rare and listed plant occurrences that are not within the immediate disturbance footprint but are located within 50 feet of disturbance limits shall have bright orange protective fencing installed at least 30 feet beyond their extent, or other distance as approved by a qualified biologist, to protect them from harm. Prior to initiation of construction activities the project proponent shall submit a site plan depicting the location(s) of special-status plants and avoidance buffers to the City for review and approval.

If special-status plants can be avoided, no further action is required. If federally- and/or state-listed individuals and/or CRPR 1B or 2 plant populations cannot be avoided, then Mitigation Measure BIO-1(d) shall be implemented.

BIO-1(d) Habitat Mitigation and Monitoring Plan

If federally- and/or state-listed plants, non-listed special-status plant populations, sensitive natural communities, or waters of the US and/or State cannot be avoided and will be impacted by development facilitated by the plan, the City shall require mitigation at a minimum ratio of 1:1 per acre of impact (and 1:1 per tree), to be determined in coordination with CDFW and USFWS as and if applicable, for each species as a component of habitat restoration. A habitat mitigation and monitoring plan (HMMP) shall be prepared by a qualified biologist and submitted to the City for review and approval. The HMMP shall include, at a minimum, the following components:

1. Description of the project/impact site (i.e., location, responsible parties, areas to be impacted by habitat type).
2. Goal(s) of the compensatory mitigation project (type[s] and area[s]) of habitat to be established, restored, enhanced, and/or preserved; specific functions and values of habitat type[s] to be established, restored, enhanced, and/or preserved).
3. Description of the proposed compensatory mitigation site (location and size, ownership status, existing functions, and values).
4. Implementation plan for the compensatory mitigation site (rationale for expecting implementation success, responsible parties, schedule, site preparation, planting plan).

5. Maintenance activities during the monitoring period, including weed removal as appropriate (activities, responsible parties, schedule).
6. Monitoring plan for the compensatory mitigation site, including no less than quarterly monitoring for the first year (performance standards, target functions and values, target acreages to be established, restored, enhanced, and/or preserved, annual monitoring reports).
7. Success criteria based on the goals and measurable objectives; said criteria to be, at a minimum, at least 80 percent survival of container plants and 30 percent relative cover by vegetation type or other industry standards as determined by a qualified restoration specialist.
8. An adaptive management program and remedial measures to address any shortcomings in meeting success criteria.
9. Notification of completion of compensatory mitigation and agency confirmation.
10. Contingency measures (initiating procedures, alternative locations for contingency compensatory mitigation, funding mechanism).
11. All nursery plants used in restoration shall be inspected for sudden oak death.

If a federally and/or state-listed plant species has the potential be impacted, an HMMP shall be submitted to the USFWS and/or CDFW for review, and federal and/or state take authorization may be required by these agencies.

Within 30 days of completion of monitoring, a final monitoring report shall be submitted to the City for review and approval, documenting compliance with the HMMP and achievement of success criteria.

BIO-1(e) Endangered/Threatened Special-status Species Habitat Assessments and Protocol Surveys

For development facilitated by the plan where the project-specific biological analysis (Mitigation Measure BIO-1[a]) determines that suitable habitat may be present for federal- or state-listed, candidate, or proposed species, the City shall require protocol habitat assessments/surveys be completed in accordance with current CDFW and/or USFWS protocols prior to issuance of any construction permits. If, through consultation with the CDFW and/or USFWS, it is determined that protocol habitat assessments/surveys are not required, the project applicant shall be required to complete and document this consultation and submit it to the City prior to issuance of any construction permits. Each protocol has different survey and timing requirements. The applicant shall be responsible for ensuring they understand the protocol requirements and shall hire a qualified biologist to conduct protocol surveys. (Note: if a federally and/or state-listed wildlife species will be impacted, federal and/or state take authorization may be required by USFWS and CDFW.)

BIO-1(f) Endangered/Threatened Animal Species Avoidance and Minimization

For development facilitated by the plan where potential impacts to aquatic and/or terrestrial animal species are identified by the project-specific Biological Resources Screening and Assessment required under Mitigation Measure BIO-1(a), the following measures shall be applied.

1. Ground disturbance shall be limited to the minimum necessary to complete the project. A qualified biologist shall flag the project limits of disturbance. Areas of special biological concern within or adjacent to the limits of disturbance shall have highly visible orange construction fencing installed between said area and the limits of disturbance.

2. All projects occurring within/adjacent to aquatic habitats (including riparian habitats and wetlands) shall be completed between April 1 and October 31, if feasible, to avoid impacts to sensitive aquatic species. Any work outside these dates would require project-specific approval from the City and may be subject to regulatory agency approval.
3. All projects occurring within or adjacent to sensitive habitats that may support federally and/or state-listed endangered/threatened species shall have a CDFW- and/or USFWS-approved biologist present during all initial ground disturbing/vegetation clearing activities. Once initial ground disturbing/vegetation clearing activities have been completed, said biologist shall conduct daily pre-activity clearance surveys for endangered/threatened species. Alternatively, and upon approval of the CDFW and/or USFWS, said biologist may conduct site inspections at a minimum of once per week to ensure all prescribed avoidance and minimization measures are fully implemented.
4. No endangered/threatened species shall be captured and relocated without express permission from the CDFW and/or USFWS.
5. If at any time during project construction an endangered/threatened species enters the construction site or otherwise may be impacted by the project, all project activities shall cease. A CDFW/USFWS-approved biologist shall document the occurrence and consult with the CDFW and USFWS, as appropriate, to determine whether it was safe for project activities to resume.
6. For all work occurring in areas where endangered/threatened species may be present and are at risk of entering the project site during construction, the applicant shall install exclusion fencing along the project boundaries prior to start of construction (including staging and mobilization). The placement of the fence shall be at the discretion of the CDFW/USFWS-approved biologist. This fence shall consist of solid silt fencing placed at a minimum of three feet above grade and two feet below grade and shall be attached to wooden stakes placed at intervals of not more than five feet. The applicant shall inspect the fence weekly and following rain events and high wind events and shall be maintained in good working condition until all construction activities are complete.
7. All vehicle maintenance/fueling/staging shall occur not less than 100 feet from any riparian habitat or water body, including seasonal wetland features. Suitable containment procedures shall be implemented to prevent spills. A minimum of one spill kit shall be available at each work location near riparian habitat or water bodies.
8. No equipment shall be permitted to enter wetted portions of any affected drainage channel or wetland.
9. At the end of each workday, excavations shall be secured with a cover or a ramp provided to prevent wildlife entrapment.
10. All trenches, pipes, culverts, or similar structures shall be inspected for animals prior to burying, capping, moving, or filling.
11. Considering the potential for the project to impact federally and state-listed species and their habitat, the City shall contact CDFW and USFWS to identify mitigation banks within Santa Barbara County during project development. If the results of the project-specific biological analysis (Mitigation Measure BIO-1[a]) determine that impacts to federally and state threatened or endangered species habitat are expected, City and/or applicant shall explore species-appropriate mitigation bank(s) servicing the region for purchase of mitigation credits.

12. Prior to grading and construction in natural areas of containing suitable upland habitat, a qualified biologist shall conduct a preconstruction survey as determined necessary during the biological analysis (Mitigation Measure BIO-1[a]). The survey should include a transect survey over the entire project disturbance footprint (including access and staging areas), and mapping of suitable habitat features, such as burrows, that are potentially suitable for listed species. If any listed species are detected, no work shall be conducted until the individual(s) leaves the site of their own accord, unless federal and/or state "take" authorization has been issued for relocation. Typical preconstruction survey procedures, such as burrow scoping and burrow collapse, cannot be conducted without federal and state permits. If any life stage of listed species are found within the survey area, the City and/or applicant shall consult with the USFWS and CDFW to determine the appropriate course of action to comply with the FESA and CESA, if permits are not already in place at the time of construction.

BIO-1(g) Worker Environmental Awareness Program

For development facilitated by the plan within undeveloped parcels and prior to construction activities (including staging and mobilization), the City shall require the project proponent to arrange Worker Environmental Awareness Program (WEAP) training for all construction personnel to attend, conducted by a City-approved biologist, to aid workers in recognizing special-status resources that may occur in the construction area. The specifics of this program shall include identification of the sensitive species and habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the work area. A fact sheet conveying this information shall also be prepared for distribution to all contractors, their employers, and other personnel involved with construction. All employees shall sign a form provided by the trainer indicating they have attended the WEAP training and understand the information presented to them. The form shall be submitted to the City to document compliance.

BIO-1(h) Northern California Legless Lizard Avoidance and Minimization

For all development facilitated by the plan in undeveloped areas and if determined necessary based on preliminary review conducted by City staff, a pre-construction clearance survey for Northern California legless lizard shall be conducted by a City-approved qualified biologist within 48 hours prior to the start of construction (including staging and mobilization). The survey shall cover the entire disturbance footprint within suitable habitats with moist loose soil, plus a minimum 100-foot buffer, where permissible, and should identify all special-status wildlife species observed on the project site. During the pre-construction survey the qualified biologist shall inspect under logs, leaf litter, or other suitable refuge. If Northern California legless lizards are identified, individuals shall be relocated by a qualified biologist to suitable cover with loose soils a minimum of 500 feet from the project site, as accessible. A report of the survey results shall be submitted to the City, for review and approval.

BIO-1(i) Roosting Bat Surveys and Avoidance Prior to Removal

For all development facilitated by the plan that will require the removal of large trees (greater than 20 inches in diameter at five feet from the ground), abandoned buildings, bridges, or other suitable roosting structure identified during a Biological Resources Screening and Assessment prior to tree and/or structure removal, a qualified biologist shall conduct a focused survey of all trees and structures to be removed or impacted by construction activities to determine whether active roosts of special-status bats are present on site. Tree or structure removal shall be planned for either the

spring or the fall, and timed to ensure both suitable conditions for the detection of bats and adequate time for tree and/or structure removal to occur during seasonal periods of bat activity exclusive of the breeding season, as described below. Trees and/or structures containing suitable potential bat roost habitat features shall be clearly marked or identified. If no bat roosts are found, the results of the survey will be documented and submitted to the City within 30 days of the survey, after which no further action will be required.

If roosts are present, the biologist shall prepare a site-specific roosting bat protection plan to be implemented by the contractor following the City's approval. Additionally, the qualified biologist shall determine compensatory mitigation for temporary or permanent habitat loss due to tree removal, in conjunction with CDFW. The plan shall incorporate the following guidance as appropriate:

- When possible, removal of trees/structures identified as suitable roosting habitat shall be conducted during seasonal periods of bat activity, including the following:
  - Between September 1 and about October 15, or before evening temperatures fall below 45 degrees Fahrenheit and/or more than 0.5 inch of rainfall within 24 hours occurs.
  - Between March 1 and April 15, or after evening temperatures rise above 45 degrees Fahrenheit and/or no more than 0.5 inch of rainfall within 24 hours occurs.
- If a tree/structure must be removed during the breeding season and is identified as potentially containing a colonial maternity roost, then a qualified biologist shall conduct acoustic emergence surveys or implement other appropriate methods to further evaluate if the roost is an active maternity roost. Under the biologist's guidance, the contractor shall implement measures similar to or exceeding the following:
  - If it is determined that the roost is not an active maternity roost, then the roost may be removed in accordance with the other requirements of this measure.
  - If it is found that an active maternity roost of a colonial roosting species is present, the roost shall not be disturbed during the breeding season (April 15 to August 31).
- Tree removal procedures shall be implemented using a two-step tree removal process. This method is conducted over two consecutive days and works by creating noise and vibration by cutting non-habitat branches and limbs from habitat trees using chainsaws only (no excavators or other heavy machinery) on day one. The noise and vibration disturbance, together with the visible alteration of the tree, is very effective in causing bats that emerge nightly to feed to not return to the roost that night. The remainder of the tree is removed on day two.
- Prior to the demolition of vacant structures within the project site, a qualified biologist shall conduct a focused habitat assessment of all structures to be demolished. The habitat assessment shall be conducted enough in advance to ensure the commencement of building demolition can be scheduled during seasonal periods of bat activity (see above), if required. If no signs of day roosting activity are observed, no further actions will be required. If bats or signs of day roosting by bats are observed, a qualified biologist will prepare specific recommendations such as partial dismantling to cause bats to abandon the roost, or humane eviction, both to be conducted during seasonal periods of bat activity, if required.
- If the qualified biologist determines a roost is used by a large number of bats (large hibernaculum), bat boxes shall be installed near the project site. The number of bat boxes installed will depend on the size of the hibernaculum and shall be determined through consultation with CDFW. If a maternity colony has become established, all construction

activities shall be postponed within a 500-foot buffer around the maternity colony until it is determined by a qualified biologist that the young have dispersed. Once it has been determined that the roost is clear of bats, the roost shall be removed immediately.

BIO-1(j) Monarch Butterfly Avoidance and Minimization

For development facilitated by the plan within undeveloped parcels, prior to construction activities and if determined necessary based on preliminary review conducted by City staff, the City shall require that all construction activities (including equipment staging, grading, and construction) shall be avoided during the monarch butterfly overwintering season between October 15 through March 15, if practicable. In the event construction activities cannot be avoided during the overwintering season, the City shall retain a qualified biologist to conduct a survey for roosting monarch butterflies within seven days prior to initiation of construction activities to determine their presence/absence.

If no monarch butterflies are observed during pre-construction surveys, no further actions are necessary. In the event construction pauses for a period of 7 days or more, if construction is planned to restart during the monarch butterfly overwintering season (October 15 through March 15), the City shall retain a qualified biologist to conduct a new survey in accordance with the requirements of this mitigation measure.

If construction activities occur during the overwintering season and monarch butterflies are present, the qualified biologist shall establish a protective buffer, ranging from 100 to 300 feet from the roosting site in which monarch butterflies are aggregating. The buffer shall be delineated on site by the biologist with flagging or staking visible by construction personnel. The construction contractor shall ensure no construction occurs within the protective buffer, including staging of equipment or stopping or idling in the buffer, during the overwintering season. In the event construction activities, or other use of equipment, is needed to work within the buffer, the qualified biologist shall be present on site to monitor construction activities and determine if the work is disturbing the aggregated butterflies. If the biologist determines the work is disturbing the butterflies, the biologist shall have the authority to stop work within the protective buffer at any time. In addition, due to the regular movement of the butterflies and locations of the aggregations, the biologist shall have the discretion to adjust the protective buffers, as necessary.

BIO-1(k) Pre- Construction Bird Surveys, Avoidance, and Notification

For all development facilitated by the plan, prior to construction activities and if determined necessary based on preliminary review conducted by City staff, construction activities initiated during the bird nesting season (February 1 – September 15), involving removal of vegetation (e.g. trees and shrubs), abandoned structures, or other nesting bird habitat, a pre-construction nesting bird survey shall be conducted no more than 5 days prior to initiation of ground disturbance and vegetation removal. The nesting bird pre-construction survey shall be conducted on foot and shall include a buffer around the construction site at a distance determined by a qualified biologist, including staging and storage areas. The minimum survey radii surrounding the work area shall be the following: 250 feet for non-raptors and 1,000 feet for raptors. The survey shall be conducted by a qualified biologist familiar with the identification of avian species known to occur in the Santa Maria region. If construction lapses for seven days or longer, the qualified biologist shall conduct another focused survey before project activities are reinitiated. If nests are found, an avoidance buffer shall be determined by the biologist dependent upon the species, the proposed work activity, and existing disturbances associated with land uses outside of the site. The qualified biologist shall observe the active nest to establish a behavioral baseline of the adults and nestlings, if present. The

qualified biologist shall continuously monitor the active nests to detect signs of disturbance and behavioral change as a result of construction impacts, such as noise, vibration, odors, or worker/equipment motion. If signs of disturbance and behavioral changes are observed, the qualified biologist shall cease work causing those changes and may contact CDFW or USFWS for guidance. The buffer shall be demarcated by the biologist with bright orange construction fencing, flagging, construction lathe, or other means to demarcate the boundary. All construction personnel shall be notified of the buffer zone as an "Ecologically Sensitive Area" and to avoid entering the buffer zone during the nesting season. No ground disturbing activities shall occur within the buffer until the biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Encroachment into the buffer shall occur only at the discretion of the qualified biologist on the basis that the encroachment will not be detrimental to an active nest. A report summarizing the pre-construction survey(s) shall be prepared by a qualified biologist and shall be submitted to the City prior to the commencement of construction activities.

Project site plans shall include a statement acknowledging compliance with the federal MBTA and California Fish and Game Code that includes avoidance of active bird nests and identification of Best Management Practices to avoid impacts to active nests, including checking for nests prior to construction activities during February 1 to September 15, and what to do if an active nest is found so that the nest is not inadvertently impacted during grading or construction activities.

Significance After Mitigation

Implementation of Mitigation Measure BIO-1(a) would reduce potential impacts to special-status plant and animal species by requiring a Biological Resources Screening and Assessment to determine whether projects proposed within undeveloped parcels, and if determined necessary based on preliminary review conducted by City staff, have any potential to impact special-status biological resources, inclusive of special-status plants and animals, sensitive vegetation communities (including vernal pools and other wetlands), and critical habitat. Implementation of Mitigation Measure BIO-1(b) and BIO-1(c) would reduce potential impacts to special-status plant species to a less than significant level by requiring preconstruction surveys and avoidance and minimization measures for special-status plant species. Implementation of Mitigation Measure BIO-1(d) would reduce potential impacts to listed plants, non-listed special-status plant populations, sensitive natural communities, and waters to a less than significant level by requiring the preparation of, and adherence to, an HMMP if special-status species or habitat are present. Implementation of Mitigation Measures BIO-1(e) and BIO-1(f) would reduce impacts to endangered and threatened special-status species by requiring habitat assessments, protocol surveys, and avoidance and minimization measures for these species. Implementation of Mitigation measures BIO-1(g) would reduce potential impacts to special-status plants and wildlife during construction facilitated by the plan by facilitating a Worker's Environmental Awareness Program. Implementation of Mitigation Measure BIO-1(h) would reduce potential impacts to Northern California legless lizard to a less than significant level by requiring preconstruction surveys and avoidance measures if Northern California legless lizard are present on a project site. Implementation of Mitigation Measure BIO-(i) would reduce potential impacts to bat species to a less than significant level by requiring assessment and preconstruction surveys of potential building and tree removals, and avoidance of roosting bats. Implementation of Mitigation Measure BIO-1(j) would reduce potential impacts to monarch butterfly to a less than significant level by requiring assessment of potential tree removals and avoidance of overwintering monarchs. Implementation of Mitigation Measure BIO-1(k) would reduce potential impacts to nesting birds to a less than significant level by requiring preconstruction surveys for nesting birds and avoidance measures if nesting birds are present on a project site.

Impacts would be less than significant with implementation of Mitigation Measures BIO-1(a) through BIO-1(k).

Threshold 2:	Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
Threshold 3:	Would the project have a substantial adverse effect on state or federally protected wetlands (including but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Impact BIO-2 WETLANDS WITHIN THE PLAN AREA MAY BE AFFECTED BY DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE. DEVELOPMENT PROJECTS WOULD BE SUBJECT TO ADOPTED CITY REGULATIONS TO MINIMIZE IMPACTS TO RIPARIAN HABITAT, SENSITIVE NATURAL COMMUNITIES, AND WETLANDS. COMPLIANCE WITH THE NPDES CONSTRUCTION GENERAL PERMIT, SANTA MARIA MUNICIPAL CODE, PROPOSED POLICIES IN THE 2045 GENERAL PLAN UPDATE, AND MITIGATION MEASURES BIO-1(A) AND BIO-1(D) WOULD ENSURE POTENTIAL IMPACTS TO RIPARIAN HABITAT, SENSITIVE NATURAL COMMUNITIES, AND WETLANDS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

The CNDDB identifies southern vernal pool as a sensitive natural community which could occur in the plan area. According to the USFWS NWI, wetlands in and surrounding the City consist of estuarine and marine habitats, freshwater ponds, freshwater emergent wetlands, freshwater forested and shrub wetlands, and riverine habitats (USFWS 2025c). Development facilitated by the plan is not likely to result in the removal of large areas of riparian, wetland, or other sensitive natural community habitat, as development would generally occur in areas of the City that are developed and surrounded by existing development. However, as shown in Figure 4.3-2, there are wetlands identified within the Annexation Area and throughout the plan area where development facilitated by the plan may occur which may be significantly degraded, or removed, by development projects. Development facilitated by the plan would be subject to Santa Maria Municipal Code Chapters 8-12A (Stormwater Runoff Pollution Prevention), and 9-68 (Flood Damage Prevention) and NPDES permit requirements to protect water quality prior to, during, and post-construction.

The 2045 General Plan Update includes the following proposed policies that would protect sensitive, riparian, creek, and wetland habitats:

> **Policy COS-1.1: Natural habitat and wildlife corridors.** Protect and, to the extent feasible, expand natural habitat and wildlife corridor areas, natural wetlands, and other natural lands throughout the city and sphere of influence.
>
> **Policy COS-1.3: Natural biodiversity.** Increase natural biodiversity through the reintroduction of native species, removal of non-native, invasive species, and proper sustainable maintenance of vegetated areas.
>
> **Policy COS-1.5: Endangered, threatened, and special status species.** Minimize potential impacts of development on federal or State endangered and threatened species and non-listed special status species through the development and permit review process. Condition development projects to avoid impacts to these species, to the greatest extent feasible.
>
> **Policy COS-4.1: Santa Maria River protection.** Protect and enhance the beneficial uses of the Santa Maria River to support essential community and environmental needs, including municipal and domestic water supply, agricultural supply, and groundwater recharge.

Policy COS-4.3: Groundwater contamination. Minimize groundwater contamination from current and previous oil and gas operations.

Policy PFS-2.3: Groundwater. Improve the long-term recharge of the Santa Maria Valley Groundwater Basin by retaining natural watershed areas, developing regional recharge basins, and minimizing impervious surfaces in new development.

~~**Policy PFS-2.6: Contaminant mitigation.** Manage contaminated sites to protect natural systems from groundwater infiltration and stormwater runoff.~~

Policy S-3.2: Agricultural runoff reduction. Work with the County of Santa Barbara to reduce off-site and urban flooding caused by agricultural runoff.

Implementation of proposed policies in the plan would ensure sensitive habitats are identified prior to project-specific siting and habitat areas are protected where applicable, and development facilitated by the plan would be subject to applicable federal, State, and City requirements, which would minimize potential impacts to riparian habitat, sensitive natural communities, and wetlands. However, unmitigated impacts to riparian and other sensitive natural communities resulting from development facilitated by the plan would still be potentially significant, requiring Mitigation Measures BIO-1(a) and BIO-1(d) to reduce potential impacts.

Mitigation Measure

Mitigation Measures BIO-1(a) and BIO-1(d) (listed above) are required to reduce impacts to a less than significant level.

Significance After Mitigation

Implementation of Mitigation Measure BIO-1(a) would reduce potential impacts to riparian habitat, sensitive natural communities, and wetlands by requiring a Biological Resources Screening and Assessment to determine whether projects proposed within undeveloped parcels, and if determined necessary based on preliminary review conducted by City staff, have any potential to impact special-status biological resources, inclusive of special-status plants and animals, sensitive vegetation communities (including vernal pools and other wetlands), and critical habitat. Implementation of Mitigation Measure BIO-1(d) would reduce potential impacts to sensitive natural communities and waters to a less than significant level by requiring the preparation of, and adherence to, an HMMP if special-status species or habitat are present. Impacts would be less than significant with implementation of Mitigation Measures BIO-1(a) and BIO-1(d) and adherence to federal, State, and City requirements and proposed plan policies COS-1.1, 1.3, 1.5, 4.1, and 4.3, PFS-2.3 and 2.6, and S-3.2.

Threshold 4:	Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Impact BIO-3 DUE TO THE EXISTING LEVEL OF DEVELOPMENT, THERE ARE NO ESSENTIAL WILDLIFE CONNECTIVITY AREAS WITHIN THE PLAN AREA. WITH ADHERENCE TO THE PROPOSED POLICIES OF THE 2045 GENERAL PLAN UPDATE AND COMPLIANCE WITH THE SANTA MARIA MUNICIPAL CODE, IMPLEMENTATION OF THE 2045 GENERAL PLAN UPDATE WOULD HAVE A LESS THAN SIGNIFICANT IMPACT ON THE MOVEMENT OF NATIVE RESIDENT OR MIGRATORY FISH OR WILDLIFE SPECIES WITHIN THE PLAN AREA, OR ON ESTABLISHED NATIVE RESIDENT OR MIGRATORY WILDLIFE CORRIDORS.

Due to the existing level of development, the plan area is not within an essential connectivity area as defined by CDFW (CDFW 2025b). Development facilitated by the plan would generally occur in areas that are developed or surrounded by existing development and urban disturbance, and no development is anticipated or planned within the Santa Maria River. As a result, development facilitated by the plan would not result in potentially significant impacts to wildlife movement because they would not obstruct wildlife corridors or fragment habitat such that wildlife movement is restricted.

The 2045 General Plan Update includes the following proposed policies, which would minimize impacts from any future development on sensitive habitat that could provide opportunities for wildlife movement:

> **Policy COS-1.1: Natural habitat and wildlife corridors.** Protect and, to the extent feasible, expand natural habitat and wildlife corridor areas, natural wetlands, and other natural lands throughout the city and sphere of influence.
>
> **Policy COS-1.2: City greenbelt.** ~~Coordinate with Santa Barbara County to~~ dDevelop a continuous system of greenbelts and natural corridors.
>
> **Policy COS-1.3: Natural biodiversity.** Increase natural biodiversity through the reintroduction of native species, removal of non-native, invasive species, and proper sustainable maintenance of vegetated areas.
>
> **Policy COS-1.5: Endangered, threatened, and special status species.** Minimize potential impacts of development on federal or State endangered and threatened species and non-listed special status species through the development and permit review process. Condition development projects to avoid impacts to these species, to the greatest extent feasible.

With implementation of the proposed policies in the 2045 General Plan Update, as well as compliance with the Santa Maria Municipal Code Chapters 8-12A (Stormwater Runoff Pollution Prevention), and 9-68 (Flood Damage Prevention), development facilitated by the plan would have a less than significant impact on the movement of any native resident or migratory fish or wildlife species or on established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

Mitigation Measure

No mitigation is required because impacts would be less than significant.

Threshold 5:	Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Impact BIO-4 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD BE REQUIRED TO ADHERE TO THE PROPOSED POLICIES OF THE 2045 GENERAL PLAN UPDATE AND SANTA MARIA MUNICIPAL CODE REQUIREMENTS RELATED TO PROTECTION OF TREES AND BIOLOGICAL RESOURCES. THEREFORE, THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Potential impacts to trees and other biological resources, such as those resulting from tree and vegetation removal, may result from development facilitated by the plan. The plan area has trees within its developed and disturbed areas, as well as its surrounding parks and open space. Chapter 8-8 of the Santa Maria Municipal Code outlines permit requirements for tree maintenance and removal. Chapter 12-44 of the Santa Maria Municipal Code implements provides regulations governing trees in the City and codifies the protection of existing trees unless otherwise approved by City Parks Division as part of a development plan. Section 8-8.07 protects publicly owned trees from damage or injury. Section 8-8.08 and 8-8.09 provide requirements for vegetation protection plans and replacement for existing publicly owned trees and vegetation during construction projects. Pursuant to Section 8-8.10 and 8-8.14, any publicly owned or maintained tree damaged or removed is required to be replaced at a 2:1 ratio at a minimum size of a 24-inch box of a comparable size and species, unless specifically approved by the City Parks Division in accordance with the tree planting requirements outlined in Section 8-8.15. Additionally, Chapter 12-44 provides tree replacement requirements dependent on the size of the tree removed. Section 8-8.19 also protects historic and heritage trees from damage or removal.

The 2045 General Plan Update includes the following proposed policies that would protect biological resources and preserve trees and the urban forest:

Policy COS-1.1: Natural habitat and wildlife corridors. Protect and, to the extent feasible, expand natural habitat and wildlife corridor areas, natural wetlands, and other natural lands throughout the city and sphere of influence.

Policy COS-1.2: City greenbelt. Coordinate with Santa Barbara County to develop a continuous system of greenbelts and natural corridors.

Policy COS-1.3: Natural biodiversity. Increase natural biodiversity through the reintroduction of native species, removal of non-native, invasive species, and proper sustainable maintenance of vegetated areas.

Policy COS-1.4: Urban rewilding. Implement urban rewilding projects to reintroduce natural processes, restore natural ecosystems, and promote biodiversity.

Policy COS-1.5: Endangered, threatened, and special status species. Minimize potential impacts of development on federal or State endangered and threatened species and non-listed special status species through the development and permit review process. Condition development projects to avoid impacts to these species, to the greatest extent feasible.

Policy COS-3.1: Urban forestry regulations. ~~I~~ Adopt and implement the Urban Forest Management Plan with the goal of expanding the urban canopy to 20 percent of the city by improving tree maintenance and planting standards in the City's Municipal Code.

~~**Policy COS-3.2: City canopy cover.** Facilitate new tree plantings per the City's Urban Forest Management Plan, with a specific focus on disadvantaged communities.~~

Development facilitated by the plan would adhere to the requirements of the Santa Maria Municipal Code and the proposed policies of the 2045 General Plan. Therefore, impacts related to conflict with local policies and ordinances protecting biological resources, including a tree preservation policy or ordinance, would be less than significant.

Mitigation Measure

No mitigation is required because impacts would be less than significant.

Threshold 6:	Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan**?**

Impact BIO-5 IMPLEMENTATION OF THE 2045 GENERAL PLAN UPDATE WOULD NOT CONFLICT WITH THE PROVISION OF AN ADOPTED HABITAT CONSERVATION PLAN, NATURAL COMMUNITY CONSERVATION PLAN, OR OTHER APPROVED LOCAL, REGIONAL, OR STATE HABITAT CONSERVATION PLAN. NO IMPACT WOULD OCCUR.

There are no habitat conservation plans, natural community conservation plans, or other approved local regional or state habitat conservation plans in the plan area. Therefore, development and improvements in the plan area would not conflict with such plans. No impact would occur.

Mitigation Measures

No mitigation is required because there would be no impact.

4.3.4 Cumulative Impacts

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (*CEQA Guidelines* Section 15065[a][3]). A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, Environmental Setting, Subsection 3.3, Cumulative Development.

By its nature, a general plan considers cumulative impacts insofar as it considers cumulative development that could occur within the City limits and annexation areas. Cumulative development has the potential to result in adverse effects to special-status species. Cumulative development could directly impact candidate, sensitive, or special-status species injury or death as a result of individuals being crushed or buried by construction vehicles, additional vehicles brought to an area by development, equipment, or displaced soil; entrapment of individuals in excavation areas, disturbance of individuals by construction-related noise and vibration (resulting from grading or other construction activities); impacts to vegetation used for food and shelter, reduction of refugia habitats, and accidental destruction of active burrows and nests by construction vehicles or equipment. Cumulative development could also result in permanent loss of suitable habitat. Potential indirect impacts resulting from development facilitated by the plan include the

introduction or spread of invasive plant species, fugitive dust, standing water or food waste, and soil compaction that hinders burrowing. Additionally, cumulative development could indirectly impact candidate, sensitive, or special-status species, including critical habitat essential for the conservation of a threatened or endangered species, through habitat degradation or removal. As a result, cumulative impacts are potentially significant.

The plan would not facilitate substantial permanent development in riparian habitat and would implement policies designed to preserve and restore habitat for special-status species. These include Policy COS-1.1 and Policy COS-1.5 which emphasize the protection of wildlife habitat. Furthermore, Mitigation Measures BIO-1(a) through BIO-1(k) would ensure development facilitated by the plan would minimize potential impacts to special status plant and wildlife species and nesting birds. Therefore, the plan would not have a cumulatively considerable contribution to cumulative impacts on candidate, sensitive, or special-status species.

Cumulative development could indirectly impact natural water resources due to offsite polluted runoff or sedimentation. Cumulative development proposed in areas identified as jurisdictional waters and/or wetlands, streambed/banks, or riparian vegetation would be subject to the permit requirements of the USACE, RWQCB, and CDFW, pursuant to Section 404 and Section 401 of the CWA, Porter-Cologne Water Quality Control Act, and Section 1600 of the California Fish and Game Code. Applicable federal and State requirements would minimize potential indirect impacts to riparian habitat and wetlands to a less than significant level. However, direct impacts to streams, wetlands, and riparian vegetation resulting from degradation or removal of habitat would be potentially significant.

The plan would not facilitate substantial permanent development in wetland, stream, or riparian habitat and would implement policies designed to preserve and restore wetland and aquatic habitats. These include, but are not limited to, Policy COS-1.1 and Policy COS-4.1 which emphasize the protection of the Santa Maria River and other wildlife habitat. Furthermore, Mitigation Measures BIO-1(a) and BIO-1(d) would ensure development facilitated by the plan minimizes potential impacts to riparian habitat, sensitive natural communities, and wetlands. Therefore, the plan would not have a cumulatively considerable contribution to cumulative impacts on riparian habitat, sensitive natural communities, or wetlands.

Due to the existing level of development, the cumulative development area is not located within a CDFW-designated essential wildlife connectivity area. The plan includes Policy COS-1.1 and COS-1.2 which seek to protect and enhance remaining natural habitat and wildlife corridors within the City. Therefore, cumulative development would have less than significant impacts on wildlife corridors.

Cumulative development would be required to adhere to applicable local policies and ordinances protecting biological resources enforced by the agencies that have jurisdiction over a project site. There is no Natural Community Conservation Plan or Habitat Conservation Plan within the proposed plan area; therefore, no cumulative impacts related to conflicts local policies or ordinances protecting biological resources or a Natural Community Conservation Plan or Habitat Conservation Plan would occur.

4.4 Cultural Resources and Tribal Cultural Resources

This section assesses potential impacts to cultural and tribal cultural resources. This section includes a brief summary of cultural and tribal cultural resources background information and a review of known archaeological, built environmental, historical, and tribal cultural resources as well as potential impacts to these resources as a result of implementation of the 2045 General Plan Update. The background information and analysis in this section is partially based on the Environmental Background Report for the City of Santa Maria, prepared in December 2020 to support their General Plan Update.

4.4.1 Setting

The cultural history of Santa Maria and the surrounding Santa Maria River Valley can be divided into three major eras: Native-American, Spanish-Mexican and Anglo-American. Remnants from these unique eras exist in the region as a diverse range of tribal, archaeological and architectural resources. The Santa Maria River Valley served as part of the larger Chumash territory that extended from the coast and Channel Islands and inland to include Santa Barbara, most of Ventura, parts of San Luis Obispo, Kern, and Los Angeles Counties. The late 18th and early 19th centuries saw the influx of Spanish-Mexican culture, with the establishment of large Spanish Land Grants in the area along the coast, while the modern Anglo-American era began in the late 19th century with the break-up and sale of the Spanish Land Grants (Santa Maria 2020).

a. Prehistoric Setting

Native American Era

The Chumash were the primary Native American inhabitants of Santa Maria before the arrival of Europeans. The earliest inhabitants of Southern California were transient hunters visiting the region approximately 12,000 B.C.E. (Before the Common Era), who were the cultural ancestors of the Chumash. At the peak, the Chumash population was estimated to be in the tens of thousands, with territory of around 7,000 square miles that spanned from Malibu to Paso Robles, stretching inland to the western edge of the San Joaquin Valley (Santa Maria 2020).

Permanent Chumash villages included hemispherical dwellings arranged in close groups, with the chief having the largest for social obligations (Brown 2001). Each Chumash village had a formal cemetery marked by tall painted poles and often with a defined entrance area (Gamble et al. 2001). Archaeological studies have identified separate sections for elite versus commoner families within the cemetery grounds (King 1969).

The acorn was a dietary staple for the mainland Chumash, though its dominance varied by coastal or inland location. Chumash diet also included cattail roots, fruits and pads from cactus, and bulbs and tubers of plants such as amole (Miller 1988).

The Chumash people were known as skilled boat builders, allowing them to travel up and down the Pacific Coast and inhabit the Channel Islands. The wooden plank canoe was employed in the pursuit of marine mammals and fish as well as facilitating an active trade network between the mainland and the Channel Islands (Johnson 1987).

The Chumash villages became increasingly permanent over time, with chiefs and shaman priests generally at the highest positions of authority. Women could serve equally with men as chiefs and priests. One chief would often hold responsibility for multiple villages. The Chumash Native American population was decimated due to European disease in the 1700s and 1800s, spread primarily by Spaniards as the mission system was founded and as the region was increasingly colonized by Mexicans and Americans (Santa Maria 2020).

b. Historic-Era Setting

Spanish-Mexican Era

Spanish settlement of the Santa Maria Valley began with the establishment of Mission San Luis Obispo in 1772 and Mission La Purisima in Lompoc 1787. In 1821, Spain granted Mexico independence and soon after the Missions were secularized. Administrators were appointed to transfer such lands to private property owners and to proceed with secular development of the area. This is now known as the Rancho Era, which ended with the transfer of California from Mexico to the United States following the Mexican-American War (Santa Maria 2020).

Anglo-American Era

Americans from the United States began arriving in California in the 1840s. After gold was discovered elsewhere in California, settlers were drawn to the Santa Maria Valley by the possibility of free land, when mission lands were made available for private ownership. With the arrival of farmers and other settlers after California gained statehood, the Santa Maria River Valley became one of the most productive agricultural areas in the state. Four prominent settlers, Rudolph Cook, John Thornburg, Isaac Fesler, and Isaac Miller, each contributed 40 acres of land where their properties met at the present day intersection of Broadway and Main Street to form what was then called “Central City” in 1875. Ten years later, the city’s name was changed to “Santa Maria” (Santa Maria 2020).

Oil exploration began in the Santa Maria Valley in 1888, with large discoveries in the early 20th century. Oil discoveries rapidly attracted a growing population to the Santa Maria Valley, bringing about the need for local governance. In 1905, Santa Maria was incorporated as a general law city. Until 1954, the city remained four square miles in size. Since that time, annexations have increased the size to approximately 22 square miles (Santa Maria 2020).

Since 1957, the city’s economic and population growth has been influenced by growth of Vandenberg Air Force Base, 20 miles south of the city. In the 1970s, the Santa Maria Town Center mall was constructed (Santa Maria 2020). Since that time the City Council has worked to maintain Santa Maria’s status as a regional retail hub, continuously working to add retail outlets. Santa Maria remains the leader in retail sales growth for Santa Barbara County. Agriculture, however, remains the city’s chief economic influence. The Santa Maria Valley is home to several vineyards and wineries and primary crops include strawberries, celery, lettuce, peas, and squash. The Santa Maria Valley is also home to several cattle ranches.

Previously Identified Historical Cultural Resources

The history of Santa Maria is preserved in its Historic Overlay District, landmarks, and objects of historical merit. The historic landmarks and objects listed below were identified by the City’s Landmark Committee and determined to contain historical merit. Of these resources, the Minerva

Club is the only one listed on the National Register of Historic Places (NRHP) and California Register of Historical Places (CRHR), none of the other resources below are listed on either register.

- The Minerva Club
- The First United Methodist Church
- Saint Peter's Episcopal Church
- The Martin Luther Tunnell Home
- The Santa Maria Inn
- The Reuben Hart Home
- Santa Maria High School
- The Landmark Building
- City Hall
- The Coca Cola Bottling Company
- Heritage Walk
- The Haslam Building
- Buena Vista Park
- Flagpole at the George S. Hobbs' Civic Center
- Site of Santa Maria's First Waterworks
- Site of the Pacific Coast Railroad Depot
- Four Corners Intersection at Main Street and Broadway
- Veterans' Memorial Community Center
- First Masonic Temple Site
- John Long House
- Orange Street Kindergarten
- Cypress Street Kindergarten
- St. Mary's Catholic Church
- Bell at El Camino School
- Site of Leo's Drive-In
- Bas Relief of Columbus' Ship, Santa Maria
- Santa Maria Civic Theater
- Zanettti Home
- Site of Rusconi's Café
- Waler House
- Franklin House
- Independent Order of Oddfellows and Haslam Building
- Rubel House

4.4.2 Regulatory Setting

a. Federal Regulations

National Register of Historic Places

The NRHP was established by the National Historic Preservation Act of 1966 as "an authoritative guide to be used by federal, State, and local governments, private groups and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment" (36 Code of Federal Regulations 60.2). The NRHP recognizes properties that are significant at the national, state, and local levels. To be eligible for listing in the NRHP, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Districts, sites, buildings, structures, and objects of potential significance must also possess integrity of location, design, setting, materials, workmanship, feeling, and association. A property is eligible for the NRHP if it meets any one of the following criteria:

- **Criterion A:** Are associated with events that have made a significant contribution to the broad patterns of our history
- **Criterion B:** Are associated with the lives of persons significant in our past
- **Criterion C:** Embody the distinctive characteristics of a type, period, or method of installation, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction
- **Criterion D:** Have yielded, or may be likely to yield, information important in prehistory or history

In addition to meeting at least one of the above designation criteria, resources must also retain integrity. The National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess several, if not all, of these seven qualities, defined in the following manner:

- **Location:** The place where the historic property was constructed or the place where the historic event occurred
- **Design:** The combination of elements that create the form, plan, space, structure, and style of a property
- **Setting:** The physical environment of a historic property
- **Materials:** The physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property
- **Workmanship:** The physical evidence of the crafts of a particular culture or people during any given period in history or prehistory
- **Feeling:** A property's expression of the aesthetic or historic sense of a particular period of time
- **Association:** The direct link between an important historic event or person and a historic property

Historic American Buildings Survey

The Historic American Buildings Survey, established in 1933 as the nation's first federal preservation program, set the standard for documenting historic architecture through a collaboration between the National Park Service, Library of Congress, and the American Institute of Architects. Designed to

mitigate the loss of architectural heritage, the Historic American Buildings Survey created a publicly accessible archive capturing a wide range of American building traditions. Its records support preservation, rehabilitation, and design efforts while contributing to public education and professional training. The program's enduring impact lies in its comprehensive documentation methods, alignment with national preservation standards, and its role in cultivating future preservation professionals.

Archaeological Resources Protection Act

The Archaeological Resources Protection Act amended the Antiquities Act of 1906 (16 United States Code [USC] 431–433) and set a broad policy that archaeological resources are important to the nation and should be protected, and special permits required before the excavation or removal of archaeological resources from public or Indian lands. The purpose of the Archaeological Resources Protection Act was to secure, for the present and future benefit of the American people, the protection of archaeological resources and sites that are on public lands and Indian lands, and to foster increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals having collections of archaeological resources and data that were obtained before October 31, 1979.

American Indian Religious Freedom Act

The American Indian Religious Freedom Act established federal policy to protect and preserve the inherent rights of freedom for Native groups to believe, express, and exercise their traditional religions. These rights include but are not limited to access to sites, use and possession of sacred objects, and freedom to worship through ceremonials and traditional rites.

Native American Graves Protection and Repatriation Act

The Native American Graves Protection and Repatriation Act of 1990 sets provisions for the intentional removal and inadvertent discovery of human remains and other cultural items from federal and tribal lands. It clarifies the ownership of human remains and sets forth a process for repatriation of human remains and associated funerary objects and sacred religious objects to the Native American groups claiming to be lineal descendants or culturally affiliated with the remains or objects. It requires any federally funded institution housing Native American remains or artifacts to compile an inventory of all cultural items within the museum or with its agency and to provide a summary to any Native American tribe claiming affiliation.

b. State Regulations

California Environmental Quality Act

CEQA requires a lead agency (in this case, the City) to determine whether a project may have a significant effect on historical resources. Sections 21083.2 and 21084.1 of the Statutes of CEQA, Public Resources Code (PRC) Section 5024.1, and State CEQA Guidelines Section 15064.5 were used as the guidelines for this evaluation. PRC Section 5024.1 requires that any properties that can be expected to be directly or indirectly affected by a proposed project be evaluated for CRHR eligibility. The purpose of the CRHR is to maintain listings of the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from material impairment and substantial adverse change. The term "historical resources" includes a resource listed in, or determined to be eligible for listing in, the CRHR; a resource included in a local register of historical resources; and any object, building, structure, site, area, place, record, or manuscript that a lead

agency determines to be historically significant (State CEQA Guidelines Section 15064.5[a]). The criteria for listing properties in the CRHR were expressly developed in accordance with previously established criteria developed for listing in the NRHP.

According to PRC Section 5024.1(c)(1-4), a resource may be considered historically significant if it retains integrity and meets at least one of the following criteria. A property may be listed in the CRHR if the resource:

1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2) Is associated with the lives of persons important in our past.
3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4) Has yielded, or may be likely to yield, information important in prehistory or history.

Under CEQA, if an archeological site is not a historical resource but meets the definition of a "unique archaeological resource" as defined in PRC Section 21083.2, then it should be treated in accordance with the provisions of that section. A unique archaeological resource is defined in PRC Section 21083.2(g) as:

An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3) Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Resources that neither meet any of these criteria for listing in the CRHR nor qualify as a unique archaeological resource under CEQA PRC Section 21083.2 are viewed as not significant. Under CEQA, "A nonunique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects" (PRC Section 21083.2[h]).

Tribal cultural resources as defined in PRC Section 21074, should also be treated in accordance with the provisions of that section. A unique tribal cultural resource is defined in PRC Section 21074a) as:

1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
    a) Included or determined to be eligible for inclusion in the California Register of Historical Resources.
    b) Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Native American Heritage Commission

PRC Section 5097.91 established the Native American Heritage Commission (NAHC), whose duties include the inventory of places of religious or social significance to Native Americans and the identification of known graves and cemeteries of Native Americans on private lands. PRC Section 5097.98 specifies a protocol to be followed when the NAHC receives notification of a discovery of Native American human remains from a County Coroner.

Assembly Bill 52

Assembly Bill (AB) 52, which took effect on July 1, 2015, amends PRC Section 5097.94 by adding eight new sections that relate to Native Americans and expands CEQA by establishing a formal consultation process for California Tribes that must be completed before a CEQA document can be certified. Any project that may affect or cause a substantial adverse change in the significance of a tribal cultural resource would require a lead agency to consult with a California Native American Tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. Consultation is beneficial because Tribes may have knowledge about the land and cultural resources that should be included in the environmental analysis for projects. The NAHC identifies Native American Tribes to be included in the process. PRC Section 21080.3.1 identifies timing and other protocols for the consultation process.

Section 21074 of AB 52 also defines tribal cultural resources as a new category of resources under CEQA. According to PRC Section 21074(a)(1), tribal cultural resources are either defined as sites, features, places, cultural landscapes, sacred places, or objects with cultural value to a California Native American Tribe, or are listed in or eligible for the CRHR or a local historic register, or have been determined by the lead agency to be a tribal cultural resource. PRC Section 21084.2 establishes that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource may have a significant effect on the environment. PRC Section 21084.3(a) states that the lead agency shall establish measures to avoid impacts that would alter the significant characteristics of a tribal cultural resource, when feasible.

Senate Bill 18

Senate Bill (SB) 18 establishes responsibilities for local governments to involve tribal organizations in early stages of land use planning for the purpose of protecting, or mitigating impacts to, cultural places. The provisions of SB 18 apply only to city and county governments and not to other public agencies. California Government Code Section 65352.3 (adopted pursuant to the requirements of SB 18) requires local governments to coordinate and consult with tribal organizations prior to the adoption or any amendment of a general plan or specific plan. Tribal organizations would be considered eligible to consult on a project if they were to have traditional lands in a local government's jurisdiction, and are identified, upon request, by the NAHC. Tribes have 90 days from the date on which they receive notification to request consultation unless a shorter timeframe has been agreed to by the tribe.

California Health and Safety Code Section 7050.5

The disposition of human remains is governed by Section 7050.5 of the California Health and Safety Code (HSC) and PRC Sections 5097.94 and 5097.98 and falls within the jurisdiction of the NAHC. According to California HSC Section 7050.5(b), if human remains are discovered, the County Coroner must be notified within 48 hours and there should be no further disturbance to the site where the

remains were found. If the remains are determined by the coroner to be Native American, the coroner is responsible for contacting the NAHC within 24 hours. California HSC Section 7051(a) prohibits all persons from removing or otherwise disturbing human remains that are inadvertently discovered before their significance may be determined. Section 7052 establishes a felony penalty for mutilating, disinterring, or otherwise disturbing human remains, except by relatives.

Native American Graves Protection and Repatriation Act

The Native American Graves Protection and Repatriation Act of 1990 sets provisions for the intentional removal and inadvertent discovery of human remains and other cultural items from federal and tribal lands. It clarifies the ownership of human remains and sets forth a process for repatriation of human remains and associated funerary objects and sacred religious objects to the Native American groups claiming to be lineal descendants or culturally affiliated with the remains or objects. It requires any federally funded institution housing Native American remains or artifacts to compile an inventory of all cultural items within the museum or with its agency and to provide a summary to any Native American tribe claiming affiliation.

California Penal Code Section 622.5

California Penal Code Section 622.5 provides misdemeanor penalties for damaging or destroying objects of historic or archaeological interest located on public or private lands, but specifically excludes the landowner.

California Public Resources Code Section 5097.5

PRC Section 5097.5 defines the unauthorized disturbance or removal of archaeological, historic, or paleontological resources located on public lands as a misdemeanor.

c. Local Regulations

Santa Maria Municipal Code

Chapter 8-3 of the Santa Maria Municipal Code authorizes the Parks and Recreation Commission to designate places, sites, buildings, structures, works of art and other objects within the incorporated limits of the City as having historic, cultural, aesthetic or other special character or interest in accordance with the following standards.

1. The landmark designated shall have historical, cultural, aesthetic or special character or interest for the general public and not be limited only in interest to a special group of persons, and be at least 50 years of age.
2. The designation of such as a landmark under this chapter shall not be detrimental to the general welfare of the community.
3. The designation of such landmark shall not require the expenditure of an unreasonable amount of money to carry out the purposes of this chapter. In applying this provision it is the intent of this chapter that whenever a landmark proposed to be so designated is private property, expenditures for its upkeep, preservation, maintenance and protection shall be made by the owner thereof in all but the most exceptional cases. If upon careful review by the Recreation and Parks Commission it is proposed that public funds be expended for the preservation, restoration, maintenance or protection thereof, or any other purpose in connection with the designation, the recommendation made by the Recreation and Parks Commission to the City

Council shall set forth that fact, and shall set forth in full the reasons therefor, and shall include a statement setting forth as accurately as possible the estimated cost in public funds which would be so involved. The City Council in acting upon the proposed designation shall also determine whether the expenditure of public funds in connection therewith is justified. In the event that such designation would be ineffective for the preservation, restoration or protection of the proposed landmark, without such expenditure, and the City Council determines that the expenditure is not justified, the place, site, building, structure, work of art or other object which is the subject of the proposal shall not be designated an historical landmark.

4. The designation of such landmark shall not infringe upon the right of a private owner thereof, if there is such, to make any and all reasonable uses of such landmark which are not in conflict with the purposes of this chapter.

Resource Management Element

Archaeological resources—such as artifacts, structures, and refuse—provide crucial insight into the cultural practices, environmental adaptations, and societal changes of past human populations. According to the City's current Resource Management Element, the Santa Maria Valley is generally not recognized as a major archaeological or paleontological resource area due to the limited number of recorded sites, certain parts of the city exhibit varying degrees of sensitivity. Figure RME-5 of the City's current Resource Management Element shows areas west of A Street and south of Foster Road are considered to have high to moderate archaeological sensitivity, suggesting a greater potential for encountering cultural materials during ground-disturbing activities. In contrast, the portion east of A Street, between West Carmen Lane and Foster Road, is categorized as having low sensitivity, and the area north of West Carmen Lane has negligible sensitivity.

4.4.3 Impact Analysis

a. Methodology and Significance Thresholds

Methodology

The assessment of potential impacts to historic, archaeological, and tribal cultural resources was informed by a review of readily available information from sources including, but not limited to, the City's list of Historical Landmarks and Objects of Historical Merit, the City's Resource Management Element, the State Office of Historic Preservation website and the National Parks Service. As a programmatic document, this EIR presents a citywide assessment of the 2045 General Plan Update. Because this Program EIR is a long-term document intended to guide actions up to 2045, this analysis relies on program-level evaluation.

On April 7, 2025 the City of Santa Maria prepared and mailed letters to six local Native American Tribes who have requested notification under AB 52 and SB 18. Under AB 52 tribes have 30 days and under SB 18 tribes have 90 days to respond and request consultation. The City has not received any request for consultation from the tribes who received the notification letter. No other tribes responded during the 30-day or 90-day period to request consultation, which elapsed on May 7th,2025 for AB 52 and on July 8th, 2025 for SB 18.

Significance Thresholds

The following thresholds of significance are based on Appendix G to the CEQA Guidelines. For the purposes of this EIR, implementation of the plan may have a significant adverse impact on cultural resources if it would do any of the following:

1. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5;
2. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5;
3. Disturb any human remains, including those interred outside of dedicated cemeteries

Implementation of the plan may have a significant adverse impact on tribal cultural resources if it would do any of the following:

1. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
    a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
    b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

The significance of a cultural resource and, subsequently, the significance of any impact are determined by consideration of whether that resource can increase our knowledge of the past. The determining factors are site content and degree of preservation. A finding of archaeological significance follows the criteria established in the CEQA Guidelines.

CEQA Guidelines Section 15064.5 (Determining the Significance of Impacts to Archaeological Resources) states:

- (3) […] Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the CRHR (PRC Section 5024.1, Title 14 CCR Section 4852).
- (4) The fact that a resource is not listed in, or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to PRC Section 5020.1(k)), or identified in an historical resources survey (meeting the criteria in PRC Section 5024.1(g)) does not preclude a lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) and 5024.1.
- (b) A project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

Historical resources are "significantly" affected if there is demolition, destruction, relocation, or alteration of the resource or its surroundings. Generally, impacts to historical resources can be mitigated to below a level of significance by following the Secretary of the Interior's Guidelines for

the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings (Guidelines Section 15064.6(b)). In some circumstances, documentation of a historical resource by way of historic narrative photographs or architectural drawings will not mitigate the impact of demolition below the level of significance (Guidelines Section 15126.4(b)(2)). Preservation in place is the preferred form of mitigation for archaeological resources as it retains the relationship between artifact and context, and may avoid conflicts with groups associated with the site (Guidelines Section 15126.4 (b)(3)(A)). If an archaeological resource does not meet either the historical resource or the more specific "unique archaeological resource" definition, impacts do not need to be mitigated (Guidelines Section 15064.5(e)). Where the significance of a site is unknown, it is presumed to be significant for the purpose of the EIR investigation.

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Impact CUL-1 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN HAS THE POTENTIAL TO ADVERSELY AFFECT PREVIOUSLY UNIDENTIFIED HISTORIC-PERIOD RESOURCES. IMPLEMENTATION OF APPLICABLE 2045 GENERAL PLAN POLICIES, STATE AND FEDERAL REGULATIONS, AND THE SANTA MARIA MUNICIPAL CODE WOULD MINIMIZE ADVERSE IMPACTS ON HISTORICAL RESOURCES. WITH MITIGATION, IMPACTS TO HISTORIC-PERIOD RESOURCES WOULD BE LESS THAN SIGNIFICANT.

Pursuant to Section 15064.5 of the CEQA Guidelines, all of the resources included in the NRHP, CRHR and the City's Historical Landmarks and Objects of Historical Merit list are considered historical resources. In addition to these known historical resources, there may be other unidentified historic resources which are eligible for inclusion in the NRHP, CRHR or the City's Historical Landmarks and Objects of Historical Merit list.

The 2045 General Plan Update would guide the general distribution, location, and extent of the various land uses in Santa Maria, but the plan does not propose or approve any specific development. As there is no development included in the plan, adoption of the plan would not directly alter any historical resources. The plan does include changes to land use designations with the intent of increasing density throughout certain areas of the city. These land use changes, and the increased development that could accompany them, have the potential to impact historical resources, including those already designated as historical as well as those which may be eligible in the future.

New residential, commercial, and industrial uses would be introduced through both new construction and the conversion of existing properties to different land use designations. The plan's emphasis on increased density and clustered development increases the likelihood of redevelopment, or additional development, on already-developed lots. Future development may involve renovations, demolitions, or new construction, which could affect historical resources that have not yet been formally evaluated but may be eligible for listing on the NRHP, CRHR, or local registers under CEQA. Over the 20-year planning horizon through 2045, additional buildings will surpass the 450-year age threshold, making them potential historic resources. As a result, redevelopment activities could lead to the physical demolition, destruction, relocation, or alteration of such resources.

Goals and policies included in the Conservation and Open Space Element of the plan, listed below, would reduce impacts to historical, and potentially historical, resources:

Goal COS-7: Historic and cultural resources. The city's cultural heritage is preserved and celebrated.

Policy COS-7.1: Historic, cultural, and tribal resources. Protect the city's historic, cultural, and tribal resources through the City's Historic Overlay Ordinance, Historic Landmark Ordinance, and proper tribal consultation practices.

Action COS-7.1.1: Review and explore opportunities for strengthening the Historic Overlay Ordinance to protect and document culturally significant sites, including tribal and historic resources.

Action COS-7.1.2: Enforce federal, State, and local regulations related to the preservation of historic and cultural resources.

Action COS-7.1.3: Avoid the relocation, rehabilitation, or alteration of historic resources to the greatest extent feasible, consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties.

Action COS-7.1.4: Support the adaptive reuse of designated and non-designated historical resources by enforcing the U.S. Secretary of the Interior's Standards and Guidelines for rehabilitation, reconstruction, and restoration, and providing technical assistance and sharing of best practices.

Policy COS-7.2: Historic, cultural, and tribal resource impact mitigation. Identify impacts of new development on historic, cultural, and tribal resources during the development and environmental review process and incorporate site-specific mitigation measures accordingly to minimize the identified impacts.

Policy COS-7.3: Tribal resource protection. Protect tribal resources by partnering with representatives of Native American tribes during planning and development activities.

Action COS-7.3.1: ~~Partner~~ Consult with local tribes and cultural organizations to identify and conserve cultural resources and points of interest.

Action COS-7.3.2: Continue to comply with State, regional, and local regulations pertaining to notification and engagement of Native American tribes, including AB 52 and SB 18.

Policy COS-7.4: Cultural resource access. Explore opportunities to incorporate cultural resources into parks and open spaces, enriching community access to Santa Maria's history.

Action COS-7.4.1: Develop wayfinding and educational signage for significant historical and cultural resources.

Action COS-7.4.2: Pursue grant funding to facilitate the preservation and restoration of historic sites significant to the City's cultural identity.

Future development would also be subject to the provisions of applicable federal and State cultural resource regulations, as well as Chapter 8-3 of the City's Municipal Code. As the plan's policies and actions may be subject to varied interpretation, Mitigation Measure CUL-1 would ensure effective implementation of Conservation and Open Space Element Actions COS-7.1.3 and COS-7.1.4. For any new development that could affect known or potential historical resources, a qualified historian must prepare a historical resource evaluation to assess possible impacts. With implementation of

this mitigation measure, development under the plan would have a less than significant impact on historical resources.

Mitigation Measures

CUL-1 Historical Built Environment

If determined necessary based on preliminary review conducted by City staff, applicants for new discretionary development projects that propose to significantly alter or demolish any historic-age features (i.e., structures determined to be over 450 years of age based on available City records, such as permitting records) shall be required to submit a historical resources evaluation prepared by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualifications Standards in architectural history or history (36 CFR Part 61). The report shall address areas containing buildings, structures, objects, sites, landscape/site plans, or other features that are 450 years of age or older and are proposed to be altered or demolished as a part of the proposed project. The evaluation shall include an intensive-level evaluation in accordance with the guidelines and best practices meeting the State Office of Historic Preservation guidelines. All evaluated properties shall be documented on Department of Parks and Recreation Series 523 Forms. The historical resources evaluation report shall be submitted to the City for review and approval.

If historical resources are identified through the survey and evaluation, the relocation, rehabilitation, or alteration of the resource shall be completed consistent with the Secretary of the Interior's Standards for the Treatments of Historic Properties (Standards). Applicants shall submit a report to the City that identifies and specifies the treatment of character-defining features and construction activities, and demonstrates how the project complies with the Standards and avoids the substantial adverse change in the significance of the historical resource as defined by CEQA Guidelines Section 15064.5(b). The report shall be prepared by an architectural historian or historical architect meeting the Professional Qualifications Standards as defined by 36 CFR Part 61 and provided to the City for review and concurrence prior to project approval.

Significance After Mitigation

Implementation of Mitigation Measure CUL-1 would reduce potential adverse impacts on historical resources by requiring the identification and evaluation of historic-age built environment features consistent with State Office of Historic Preservation guidance, and—when applicable—ensuring conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties. This process would promote responsible management of significant resources through avoidance, rehabilitation, or relocation where feasible, and ensure effective implementation of Conservation and Open Space Element Actions COS-7.1.3 and COS-7.1.4. Therefore, with implementation of Mitigation Measure CUL-1, impacts to historical resources pursuant to §15064.5 would less than significant.

Threshold 2:	Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Impact CUL-2 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE HAS THE POTENTIAL TO DISTURB OR DAMAGE ARCHAEOLOGICAL RESOURCES. IMPLEMENTATION OF APPLICABLE 2045 GENERAL PLAN POLICIES, STATE AND FEDERAL REGULATIONS, AND THE SANTA MARIA MUNICIPAL CODE WOULD MINIMIZE ADVERSE IMPACTS TO ARCHAEOLOGICAL RESOURCES. WITH MITIGATION, IMPACTS TO ARCHAEOLOGICAL RESOURCES WOULD BE LESS THAN SIGNIFICANT.

The 2045 General Plan Update would guide the general distribution, location, and extent of the various land uses in Santa Maria, but the plan does not propose or approve any specific development. As there is no development included in the plan, adoption of the plan would not directly impact any archaeological resources. The plan does include changes to land use designations with the intent of increasing density throughout certain areas of the city, as well as annexation of undeveloped land east of the City Limits. These land use changes, and the increased development that could accompany them, have the potential to impact known as well as previously unidentified archaeological resources.

Effects on archaeological resources can only be determined once a specific project has been proposed because the effects are highly dependent on individual project site conditions and the characteristics of proposed ground disturbing activities. However, ground disturbing activities associated with development facilitated by the 2045 General Plan Update have the potential to damage or destroy archaeological resources that may be present on or below the ground surface. Potential impacts to archaeological resources are most likely to occur on undeveloped lots, areas that have not been studied through a cultural resource investigation, or when excavation extends to depths lower than previous disturbance. Consequently, damage to or destruction of previously unknown subsurface archaeological resources could occur as a result of development facilitated by the plan.

Goals and policies included in the Conservation and Open Space Element of the plan, listed below, would reduce impacts to archaeological resources:

Goal COS-7: Historic and cultural resources. The city's cultural heritage is preserved and celebrated.

> **Policy COS-7.5: Archaeological resource protection.** Protect archaeological resources by requiring development to incorporate adequate mitigation to ensure the integrity of these resources.
>
> > **Action COS-7.5.1:** Continue to analyze project-specific impacts to archaeological resources through the development review and CEQA processes with the goal of avoiding and reducing impacts on archaeological resources.
> >
> > **Action COS-7.5.2:** Consult with representatives of Native American tribes to ensure the appropriate treatment of archaeological resources, including cultural artifacts and human remains, if found.

These goals, policies, and actions are intended to preserve and protect known as well as previously unidentified archaeological resources. Development facilitated by the plan would be subject to the provisions of applicable federal and State cultural resource regulations listed in Section 4.4.2, Regulatory Setting. These regulations require project-specific avoidance of archaeological resources, or if an archaeological resource cannot be avoided, implementation of mitigation in accordance with applicable federal and State law regarding data collection and preservation of archaeological

resources. However, there is potential for historic-aged and prehistoric archaeological resources to exist throughout the plan area which could be damaged or destroyed during ground-disturbing activities. Therefore, the 2045 General Plan's impact on archaeological resources is potentially significant and Mitigation Measures CUL-2(a) through CUL-2(c) are required.

Mitigation Measures

CUL-2(a) Archaeological Resources Assessment

If determined necessary based on preliminary review conducted by City staff, applicants for new discretionary development projects that involve ground disturbance activities (that may include but are not limited to, pavement removal, potholing, grubbing, tree removal, and grading) shall be required to submit to the City an archaeological resources assessment prepared by a qualified archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in either prehistoric or historic archaeology. Assessments shall include a CHRIS records search at the NWIC and a SLF Search from the NAHC. The records searches shall characterize the results of previous cultural resource surveys and disclose any cultural resources that have been recorded and/or evaluated in and around the development site. A qualified archaeologist shall conduct a Phase I pedestrian survey for those projects which include development in archaeologically sensitive areas, as designated by the City, to locate any surface cultural materials.

If the Phase I archaeological survey identifies resources that may be affected, the applicant shall also conduct Phase II testing and evaluation. If resources are determined significant or unique through Phase II testing and site avoidance is not possible, the qualified professional shall identify appropriate site-specific mitigation measures in the Phase II evaluation. These measures may include, but would not be limited to, a Phase III data recovery program, avoidance, or other appropriate actions to be determined by a qualified archaeologist. If significant archaeological resources cannot be avoided, impacts may be reduced to less than significant level by filling on top of the sites rather than cutting into the cultural deposits. Alternatively, and/or in addition, a data collection program may be warranted, including mapping the location of artifacts, surface collection of artifacts, or excavation of the cultural deposit, to characterize the nature of the buried portions of sites. Curation of the excavated artifacts or samples would occur as specified by the archaeologist. The City shall review and approve the archaeological resources assessment prior to project approval.

CUL-2(b) Unanticipated Discoveries

For new development projects where a Phase I archaeological survey identifies archaeological resources that may be affected, project applicants shall be required to retain a qualified cultural resource specialist to monitor construction activities that involve ground-disturbing activities within 60 feet of a potentially significant cultural resource. If archaeological resources are encountered during ground-disturbing activities, work in the immediate area shall halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find. If determined to be necessary by the qualified archaeologist, the evaluation may require preparation of a treatment plan and archaeological testing for CRHR eligibility. If the discovery proves to be significant under CEQA and cannot be avoided by the project, additional work, such as excavating the cultural deposit to fully characterize its extent and collecting and curating artifacts, may be determined to be necessary by the qualified archaeologist to mitigate any significant impacts to cultural resources. If archaeological resources of Native American origin are identified during construction, a qualified archaeologist shall consult

with the City to begin Native American consultation procedures. Periodic reports of the find and subsequent evaluations shall be submitted to the City during construction.

CUL-2(c) Workers Environmental Awareness Program

For new development projects where a Phase I archaeological survey identifies archaeological resources that may be affected, project applicants shall ensure a City-approved archaeologist provides a cultural resources awareness training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers. The WEAP shall be conducted prior to any project-related ground disturbing activities in the project area. The WEAP would include relevant information regarding sensitive cultural resources, including applicable regulations, protocols for avoidance, and consequences of violating State laws and regulations. The WEAP shall also describe appropriate avoidance and impact minimization measures for cultural resources that could be located at the project site and would outline what to do and who to contact if any potential cultural resources or tribal cultural resources are encountered.

Significance After Mitigation

Implementation of Mitigation Measures CUL-2(a) through CUL-2(c) would reduce potential adverse impacts on archaeological resources by requiring identification and evaluation of any archaeological resources that may be present prior to construction and by providing steps for the evaluation and protection of unanticipated finds encountered during construction. This process would promote responsible management of archaeological resources through avoidance, rehabilitation, or relocation where feasible, and ensure effective implementation of Conservation and Open Space Element Policy COS-7.5 and Actions COS-7.5.1 and COS-7.5.2. Therefore, with implementation of Mitigation Measures CUL-2(a) through CUL-2(c), impacts to archaeological resources pursuant to Section 15064.5 would less than significant.

Threshold 3:	Would the project disturb any human remains, including those interred outside of formal cemeteries?

Impact CUL-3 GROUND DISTURBING ACTIVITIES ASSOCIATED WITH DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE COULD RESULT IN DISTURBANCE OF HUMAN REMAINS. COMPLIANCE WITH CALIFORNIA HEALTH AND SAFETY CODE SECTION 7050.5 AND PUBLIC RESOURCES CODE SECTION 5097.8 WOULD ENSURE THIS POTENTIAL IMPACT WOULD BE LESS THAN SIGNIFICANT.

Human burials outside of formal cemeteries can occur in prehistoric archaeological contexts, and the Santa Maria Cemetery lies within the plan area. Excavations during construction activities facilitated by the plan could have the potential to disturb human remains in the plan area which could include Native American burial sites.

Pursuant to California HSC Section 7050.5, if human remains are found, the County Coroner must be notified immediately, and no further disturbance would occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. If the human remains are determined to be of Native American origin, the County Coroner would notify the NAHC, which would determine and notify a Most Likely Descendent (MLD). The MLD has 48 hours from being granted site access to make recommendations for the disposition of the remains. If the MLD does not make recommendations within 48 hours, the landowner would reinter the remains in a location that would not be affected by future ground-disturbing activities. Development facilitated by the

plan would comply with the provisions set forth pursuant to California HSC Section 7050.5 and PRC Section 5097.98. Therefore, although it is possible ground-disturbing activities related to project construction could disturb human remains beneath the project site, adherence to California HSC Section 7050.5 would ensure impacts would be less than significant.

Mitigation Measures

No mitigation is required because impacts would be less than significant.

Threshold 4:	Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Impact CUL-4 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE HAS THE POTENTIAL TO DISTURB OR DAMAGE TRIBAL CULTURAL RESOURCES. IMPLEMENTATION OF APPLICABLE 2045 GENERAL PLAN POLICIES, STATE AND FEDERAL REGULATIONS, AND THE SANTA MARIA MUNICIPAL CODE WOULD MINIMIZE ADVERSE IMPACTS TO TRIBAL CULTURAL RESOURCES. WITH MITIGATION, IMPACTS TO TRIBAL CULTURAL RESOURCES WOULD BE LESS THAN SIGNIFICANT.

As discussed in the Methodology section, the City of Santa Maria sent notification letters on April 7, 2025, to six local tribes under AB 52 and SB 18, but no requests for consultation were received during the respective 30- and 90-day response periods, which ended on May 7 and July 8, 2025.

Potential effects on tribal cultural resources can only be fully assessed once a specific project is proposed, as impacts are highly dependent on site-specific conditions and the nature and extent of ground-disturbing activities. Nevertheless, development facilitated by the plan may involve ground disturbance in areas that have not been subject to prior cultural resource studies, creating the potential to disturb or destroy previously unidentified tribal cultural resources. These impacts are more likely to occur on undeveloped parcels or in locations where excavation reaches below previously disturbed soils. As such, inadvertent impacts to tribal cultural resources could result from future development under the plan.

Future development facilitated under the plan that is subject to CEQA would be required to comply with the provisions of AB 52, including formal consultation with California Native American Tribes traditionally affiliated with the area, prior to project implementation. In compliance with AB 52, a determination of whether project-specific substantial adverse effects on tribal cultural resources would occur along with identification of appropriate, project-specific avoidance, minimization, or mitigation measures would be required. Due to the programmatic nature of the plan, it is not possible to fully determine impacts. Impacts on tribal cultural resources can only be accurately

evaluated when a specific project is proposed, given that potential effects vary based on individual site conditions and the scope of planned ground-disturbing work. Although no specific tribal cultural resources eligible for the NRHP, CRHP or local register were identified as being impacted by the plan, it is possible for tribal cultural resources to exist throughout the plan area. Any future project implementation would require project-specific tribal cultural resources identification and consultation, and the appropriate avoidance, minimization, or mitigation would be incorporated.

Policies included in the Conservation and Open Space Element of the plan, listed below, would reduce impacts to tribal cultural resources:

Policy COS-7.3: Tribal resource protection. Protect tribal resources by partnering with representatives of Native American tribes during planning and development activities.

Action COS-7.3.1: ~~Partner~~ Consult with local tribes and cultural organizations to identify and conserve cultural resources and points of interest.

Action COS-7.3.2: Continue to comply with State, regional, and local regulations pertaining to notification and engagement of Native American tribes, including AB 52 and SB 18.

Policy COS-7.1: Historic, cultural, and tribal resources. Protect the City's historic, cultural, and tribal resources through the City's Historic Overlay Ordinance, Historic Landmark Ordinance, and proper tribal consultation practices.

Action COS-7.1.2: Enforce federal, State, and local regulations related to the preservation of historic and cultural resources.

Policy COS-7.2: Historic, cultural, and tribal resource impact mitigation. Identify impacts of new development on historic, cultural, and tribal resources during the development and environmental review process and incorporate site-specific mitigation measures accordingly to minimize the identified impacts.

These policies and actions are intended to preserve and protect known and previously unidentified tribal resources. In addition to these local policies, development facilitated by the plan would be subject to the provisions of applicable federal and State tribal resource regulations, listed in Section 4.4.2, Regulatory Setting.

Development facilitated by plan would undergo project-specific tribal cultural resource consultation pursuant to the requirements of PRC Section 21084 and Policy COS-7.3, Tribal resource protection. There is always potential for unknown tribal cultural resources to exist throughout the plan area which could be damaged or destroyed during ground-disturbing activities. The following measures are included to mitigate potential impacts to less than significant, knowing that upon recognition, avoidance would be the preferred method when feasible. Therefore, the plan's impact on tribal cultural resources is potentially significant and Mitigation Measures CUL-4(a) and CUL-4(b) are required.

Mitigation Measures

CUL-4(a) Workers Environmental Awareness Program

For any project with the potential to encounter tribal cultural resources as determined through consultation and/or the preparation of archaeological assessments, the project applicant shall be required to invite a City-approved archaeologist to provide a tribal cultural resources awareness

training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers. The City would also invite consulting Tribe(s) to provide a tribal cultural resources awareness training program for all personnel involved in project construction, including field consultants and construction workers. The WEAP training shall be conducted prior to any project-related ground disturbing activities in the project area. The WEAP would include relevant information regarding sensitive cultural resources and tribal cultural resources, including applicable regulations, protocols for avoidance, and consequences of violating State laws and regulations. The WEAP will also describe appropriate avoidance and impact minimization measures for tribal cultural resources that could be located at the project site and would outline what to do and who to contact if any potential cultural resources or tribal cultural resources are encountered. The WEAP would emphasize the requirement for confidentiality and culturally appropriate treatment of any discovery of significance to Native Americans and would discuss appropriate behaviors and responsive actions, consistent with local tribal values.

CUL-4(b) Tribal Cultural Monitoring

For any project with the potential to encounter tribal cultural resources as determined through consultation and/or the preparation of archaeological assessments, the project applicant shall be required to retain a tribal monitor to monitor construction activities that involve ground-disturbing activities that will occur within 60 feet of a potentially significant cultural resource.

Significance After Mitigation

Implementation of Mitigation Measures CUL-4(a) and CUL-4(b) would mitigate potential impacts to a less than significant level by requiring the identification and evaluation of any tribal cultural resources that may be present prior to construction and by providing steps for the evaluation and protection of unanticipated finds encountered during construction.

4.4.4 Cumulative Impacts

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, *Environmental Setting,* Subsection 3.3, *Cumulative Development*.

By its nature, a general plan considers cumulative impacts insofar as it considers cumulative development that could occur within the City Limits and annexation areas. Cumulative development throughout the City of Santa Maria and the Santa Barbara County region has the potential to result in significant impacts on historical resources, particularly through the incremental alteration or demolition of historic structures and features associated with long-term growth and redevelopment. While many of these resources are known, others have not yet been evaluated and may be eligible for listing on the NRHP, CRHR, or local historic registers. Given the scale and pace of cumulative development activities, cumulative development and redevelopment could cause the loss of built-environment historical resources, resulting in a significant cumulative impact.

The plan would facilitate additional growth within the city, including on sites with known or potential historical resources. Although compliance with proposed policies within the plan would reduce impacts to these resources to the maximum extent feasible, cumulative development and redevelopment could nonetheless cause the loss of built-environment historical resources. Alteration or demolition of historical resources remains a possibility throughout the plan area and immediate surroundings with potentially cumulative impacts. As such, cumulative impacts to historical resources are considered significant. The 2024 General Plan Update would implement Mitigation Measure CUL-1, which requires identification and evaluation of historic-age built environment features consistent with State Office of Historic Preservation guidance, and ensures conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties. All new development in the City and annexation areas would be required to be consistent with the goals and policies included in the Conservation and Open Space Element, and to comply with applicable federal and State cultural resource regulations, as well as Chapter 8-3 of the City's Municipal Code. Compliance with the goals and policies included in the Conservation and Open Space Element as well as applicable federal and State cultural resource regulations, in addition to implementation of Mitigation Measure CUL-1 would ensure the plan's contribution to significant cumulative historical resource impacts would not be cumulatively considerable.

Cumulative development throughout the City of Santa Maria and the Santa Barbara County region would result in development in previously undisturbed areas, contributing to regional impacts on archaeological resources. While impacts to archaeological resources are frequently mitigated on a project-by-project basis, certain archaeological resources may have regional significance, and the cumulative loss of archaeological resources may be considerable. As such, cumulative impacts to archaeological resources are considered significant. The 2024 General Plan Update would implement Mitigation Measures CUL-2(a) through CUL-2(c), which require the identification and evaluation of any archaeological resources that may be present prior to construction and by providing steps for the evaluation and protection of unanticipated finds encountered during construction. All new development in the City and annexation areas would be required to be consistent with the goals and policies included in the Conservation and Open Space Element, and to comply with applicable federal and State cultural resource regulations. Compliance with the goals and policies included in the Conservation and Open Space Element as well as applicable federal and State cultural resource regulations, in addition to implementation of required mitigation measures would ensure the plan's contribution to significant cumulative archaeological resources impacts would not be cumulatively considerable.

The potential for disturbance of human remains is site-specific, such that the disturbance of remains at one site is generally not considered additive at another site. While cumulative development has the potential to uncover unidentified human remains, all cumulative development would be subject to the requirements set forth within California HSC Section 7050.5 and PRC Section 5097.98. These code sections set standard procedures for the discovery of human remains and further evaluation if the remains are determined to be of Native American origin. Consequently, cumulative impacts associated with potential disturbance of human remains would be less than significant.

Compliance with AB 52 and continued involvement with local tribes in regional planning efforts would support the identification of potential adverse impacts on known tribal cultural resources and facilitate the implementation of avoidance, minimization, or supplemental mitigation measures beyond those provided in Mitigation Measures CUL-4(a) and CUL-4(b). Therefore, cumulative impacts to tribal cultural resources would be less than significant.

4.5 Hydrology and Water Quality

This section evaluates the potential environmental effects related to hydrology and water quality associated with implementation of the plan. It discusses the regional and local watershed characteristics, including water quality, drainage and infiltration patterns, and flood hazards. The analysis includes a review of surface water, groundwater, water supply, water quality, flooding, and stormwater. Water supply is also discussed in Chapter 4.9, *Utilities and Service Systems*, as is wastewater conveyance and stormwater infrastructure. Issues regarding wetlands and waters of the U.S. are discussed in Chapter 4.3, *Biological Resources*. Erosion is further discussed in Chapter 4.9, *Effects Found Not to be Significant*.

4.5.1 Setting

The City of Santa Maria is located in the central coast area of California in northern Santa Barbara County. The weather in Santa Maria is characterized by a typical Mediterranean coastal climate, which is generally dry in the summer with mild, wet winters. Rainfall in the area is concentrated in the winter months with the wettest months being December, January, February, and March, which have average monthly rainfall totals of 2.12, 2.75, 2.99, and 2.64 inches, respectively (U.S. Climate Data 2025).

a. Surface Water

The California Department of Water Resources (DWR) divides surface watersheds in California into 10 hydrologic regions. Santa Maria lies within the Central Coast hydrologic region, a large coastal region in central California that consists of approximately 11,300 square miles and includes all of Santa Cruz, Monterey, San Luis Obispo, and Santa Barbara counties, most of San Benito County, and portions of San Mateo, Santa Clara, and Ventura counties (DWR 2013).

Santa Maria is located within the Santa Maria watershed. The watershed drains approximately 1,880 square miles and includes all tributaries of the Cuyama River, Sisquoc River, and the Santa Maria River (City of Santa Maria 2020). The Santa Maria River, which flows 24 miles from the confluence of the Sisquoc River and Cuyama River to the Pacific Ocean flows around the northern edge of the city from west to east.

b. Groundwater

The city overlies the Santa Maria River Valley Groundwater Basin. A majority of the Santa Maria River Valley Groundwater Basin is adjudicated and is managed by the Northern Cities Management Area, Nipomo Mesa Management Area, and the Santa Maria Valley Management Area. There are some non-adjudicated areas within the Basin, which are managed by groundwater sustainability agencies formed by the County of San Luis Obispo, the City of Arroyo, and the County of Santa Barabara (County of San Luis Obispo 2025). The Santa Maria River Valley Groundwater Basin covers approximately 288 square miles (City of Santa Maria 2020). The Santa Maria Valley Management Area includes approximately 175 square miles of the Santa Maria River Valley Groundwater Basin in northern Santa Barbara and southern San Luis Obispo Counties (City of Santa Maria 2020). The entire basin has a storage capacity of 2,300,000 acre feet (City of Santa Maria 2020). Lopez Reservoir and Twitchell Reservoir store stormwater for groundwater basin recharge. Groundwater is used for industrial, municipal, and agricultural uses within the city (City of Santa Maria 2020).

c. Water Quality

Surface Water Quality

Land use affects the quality of surface water in the city. There are large agricultural ~~operations~~ uses within the city ~~that~~ may contribute to surface water pollution. These ~~operations~~ uses are a ~~substantial~~ source of sediment which enters the city's storm drain system (City of Santa Maria 2020). Additionally, pesticides, herbicides, and fertilizer are pollutants associated with agricultural ~~operations~~ uses that affect surface water quality within the city. Pollutants within urbanized areas of the city, such as heavy metals hydrocarbons, detergents, fertilizers, and pesticides, and construction activities which can cause erosion are additional sources of surface water pollution which impact water quality within the city (City of Santa Maria 2020).

Pollutants of known concern in the Santa Maria Watershed include fecal coliform, nitrates, sediments, and ammonia in surface water; nitrates and total dissolved solids in groundwater; organochlorine pesticides in the Santa Maria River Estuary (located approximately 10 miles west of Santa Maria); and petroleum production by-product (diluent) in surface water of the Guadalupe Dunes which is located directly north and south of the Santa Maria River mouth and estuary and nearby areas (City of Santa Maria 2020). The Clean Water Act Section 303(d) requires States to keep registers of impaired waters that do not meet water quality standards. The Santa Maria River is included on the Section 303(d) list for nitrate pollutants from agriculture, domestic animals/livestock, natural sources, and urban runoff/storm sewers. In addition, Arsenic, Chloride, Chlorpyrifos, Cypermethrin, Cyhalothrin, DDD, DDE, DDT, Diazinon, Dieldrin, Endrin, Imidacloprid, Lead, Linurion, Manganese, Malathion, Nitrate, Oxyfluorfen, Prometryn, Pyrethroids, Selenium, Specific Conductivity, Temperature, Total Dissolved Solids, Toxicity, and Toxaphene are all listed pollutants for the Santa Maria River (California State Water Board 2024). The Santa Maria Watershed Toxicity and Pesticides total maximum daily load (TMDL)[1] is applicable to the following pollutants: Chlorpyrifos, Cypermethrin, DDD, DDE, DDT, Diazinon, Dieldrin, Endrin, Malathion, Nitrate, Toxicity, Pyrethroids, and Toxaphene. For all other pollutants TMDL are currently being drafted and are expected to be completed in 2035. The TMDL for Imidacloprid is expected to be completed in 2027 (California State Water Board 2024).

Groundwater Quality

Groundwater quality varies within the Santa Maria Valley. Total dissolved solids are known pollutants in groundwater within the Santa Maria Watershed. Additionally, petroleum production by-product (diluent) has been found in groundwater below the Guadalupe Dunes and nearby areas (City of Santa Maria 2020). The use and reuse of groundwater, coupled with the introduction of additives from municipal and agricultural use, and evaporation of much of the applied water, result in increasing mineralization of the groundwater (City of Santa Maria 2020). Surface waters serve as a major source of recharge for the Santa Maria River Valley Groundwater Basin.

d. Flood Hazards

Flood hazards can occur when the amount of rainfall exceeds the infiltration capacity of the surrounding landscape or the conveyance capacity of the stormwater drainage system. Flood risk is defined as an annual percent chance of flooding, or the probability that flooding would occur in any given year. Although a 100-year flood will, on average, occur once every 100 years, the probability

[1] A total maximum daily load (TMDL) is the maximum amount of a pollutant allowed to enter a waterbody to meet water quality standards (USEPA 2024).

of a 100-year flood is one percent for any particular year. Two 100-year floods could occur in the same year or even in the same month, but the likelihood that two 100-year flood events would occur consecutively is very small.

According to Flood Insurance Rate Maps prepared by FEMA, portions of Santa Maria lie within 1 percent annual chance (100-year) flood zones; these areas are located throughout the city, but are predominately concentrated along the city's northern border, along the Santa Maria River. Additionally, portions of Santa Maria lie within 0.2 percent annual chance (500-year) flood zones. These areas are concentrated near Main Street (S.R. 166) and Orcutt Creek (City of Santa Maria 2020). These areas are shown in Figure 4.5-1.

Santa Maria is approximately 11.4 miles east of the Pacific Ocean. According to the California Department of Conservation, no part of the city is within a tsunami hazard zone (DOC 2025). The city is approximately three miles from Guadalupe Lake. Due to the distance and intervening topography, the city is not at risk of being inundated due to a seiche.

4.5.2 Regulatory Setting

a. Federal Regulations

Clean Water Act

The federal Clean Water Act, enacted by Congress in 1972 and amended several times since, is the primary federal law regulating water quality in the United States and forms the basis for several State and local laws throughout the country. The Clean Water Act established the basic structure for regulating discharges of pollutants into the waters of the United States. The Clean Water Act gave the United States Environmental Protection Agency (USEPA) the authority to implement federal pollution control programs, such as setting water quality standards for contaminants in surface water, establishing wastewater and effluent discharge limits for various industry contaminants in surface water, establishing wastewater and effluent discharge limits for various industry categories, and imposing requirements for controlling nonpoint-source pollution. At the federal level, the Clean Water Act is administered by the USEPA and United States Army Corps of Engineers (USACE). At the state and regional levels in California, the Clean Water Act is enforced by the State Water Resources Control Board (SWRCB) and the nine Regional Water Quality Control Boards (RWQCBs).

Clean Water Act Section 303(d)

Section 303(d) of the Clean Water Act requires states to identify water bodies that do not meet water quality objectives and are not supporting their beneficial uses. Each state must submit an updated biennial list, called the 303(d) list, to the USEPA. In addition to identifying the water bodies that are not supporting beneficial uses, the list also identifies the pollutant or stressor causing impairment and establishes a priority for developing a control plan to address the impairment. If a water body is designated as "impaired," then a TMDL is developed and identified for the affected water body. A TMDL establishes the maximum daily amount of a pollutant allowed in an identified water body and is used as a planning tool in addressing water quality impairments and improving water quality.

- 0.2% Annual Chance Flood Hazard
- Regulatory Floodway

Clean Water Act Section 401

Under Section 401 of the Clean Water Act, the RWQCBs have regulatory authority over actions in waters of the United States and/or the State of California through the issuance of water quality certifications, which are issued in conjunction with any federal permit (e.g., permits issued by the USACE under Section 404 of the Clean Water Act, described below). Section 401 of the Clean Water Act provides the SWRCB and the RWQCBs with the regulatory authority to waive, certify, or deny any proposed activity that could result in a discharge to surface waters of the State. To waive or certify an activity, these agencies must find that the proposed discharge would comply with State water quality standards, including those protecting beneficial uses and water quality. If these agencies deny the proposed activity, the federal permit cannot be issued. This water quality certification is generally required for projects involving the discharge of dredge or fill material to wetlands or other bodies.

Clean Water Act Section 402

Section 402 of the Clean Water Act establishes the National Pollution Discharge Elimination System (NPDES) regulations for stormwater and other pollutant discharges. Section 402 prohibits discharge of pollutants to waters of the United States unless they are regulated by an NPDES permit. Stormwater discharges are regulated under a variety of NPDES permits, including municipal, agricultural, industrial, construction, and low-threat discharge permits.

In 1987, Congress amended the Clean Water Act to require the implementation of a two-phased program to address stormwater discharges. Phase I of the NPDES program, promulgated by the USEPA in November 1990, requires NPDES permits for stormwater discharges from municipal separate storm sewer systems (MS4s)[2] serving populations of 100,000 or greater, construction sites disturbing greater than five acres of land, and 10 categories of industrial activities.

The USEPA recognized that smaller construction projects (disturbing less than five acres) and small MS4s (serving populations smaller than 100,000) were also contributing substantially to pollutant discharges nationwide. Therefore, in order to further improve stormwater quality, the USEPA promulgated the NPDES Phase II program in January 2000, which requires NPDES permits for stormwater discharges from regulated small MS4s and for construction sites disturbing between one and five acres of land.

In California, the NPDES program is administered by SWRCB through the nine RWQCBs. Further discussion of the NPDES program and permits in California relevant to the project are provided in discussion of state and local regulations, below.

Clean Water Act Section 404

Under Section 404 of the Clean Water Act, proposed discharges of dredged or fill material into waters of the United States require USACE authorization. Waters of the United States generally include tidal waters, lakes, ponds, rivers, streams (including intermittent streams), and wetlands (with the exception of isolated wetlands).

[2] An MS4 is a conveyance or system of conveyances designed or used to collect or convey stormwater (e.g., storm drains, pipes, ditches) that are owned by a state, city, town, or other public entity.

National Flood Insurance Program

The National Flood Insurance Program is a program administered by the Federal Emergency Management Agency (FEMA) to provide subsidized flood insurance for property owners in communities. The National Flood Insurance Program established regulations that limit development in flood-prone areas. The boundaries of flood-prone areas are delineated on FEMA's Flood Insurance Rates Maps, which provide flood information and identify the flood hazard in the community. In certain high-risk areas, federally regulated or insured lenders require property owners to have flood insurance before issuing a mortgage.

b. State Regulations

Porter-Cologne Water Quality Control Act of 1970

The federal Clean Water Act places the primary responsibility for the control of water pollution and planning the development and use of water resources with the states, although it does establish certain guidelines for the states to follow in developing their programs. California's primary statute governing water quality and water pollution is the Porter-Cologne Water Quality Control Act of 1970 (Porter-Cologne Act). The Porter-Cologne Act grants the SWRCB and the nine RWQCBs broad powers to protect water quality and is the primary vehicle for the implementation of California's responsibility under the federal Clean Water Act. The Porter-Cologne Act grants the SWRCB and RWQCBs the authority and responsibility to adopt plans and policies, to regulate discharges to surface water and groundwater, to regulate waste disposal sites, and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, oil, or petroleum product. Each RWQCB must formulate and adopt a water quality control plan for its region. The regional plans are to conform to the policies set forth in the Porter-Cologne Act and established by the SWRCB in its State water policy. The Porter-Cologne Act also provides that a RWQCB may include in its region a regional plan with water discharge prohibitions applicable to particular conditions, areas, or types of waste. The City is within the jurisdictional boundaries of the Central Coast RWQCB (Region 3).

Phase II Municipal Storm Water Permit

The Municipal Storm Water Permitting Program regulates storm water discharges from Municipal Separate Storm Sewer Systems (MS4s). The NPDES MS4 permits in California are issued in two phases by the SWRCB and RWQCBs. Phase I MS4 permits are issued by the RWQCBs to medium (i.e., serving between 100,000 and 250,000 people) and large (i.e., serving more than 250,000 people) municipalities. Most of these permits are issued to a group of co-permittees encompassing an entire metropolitan area. The Phase II MS4 Permit is issued by the SWRCB and is applicable to smaller municipalities (i.e., populations of less than 100,000 people) and nontraditional small MS4s (e.g., military bases, public campuses, and prison and hospital complexes). The Phase II MS4 Permit (*Waste Discharge Requirements [WDRs] for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems [MS4s] General Permit],* Order No. 2013-0001-DWQ, NPDES No. CAS000004) became effective on July 1, 2013 and covers Phase II permittees statewide, including the City of Santa Maria. The Phase I and Phase II MS4 Permits require the permittees to develop a storm water management program and individual dischargers to develop and implement Storm Water Management Plans (SWMP) to manage discharges to municipal storm drain systems.

Sustainable Groundwater Management Act

The Sustainable Groundwater Management Act (SGMA) of 2014 is a comprehensive three-bill package that California Governor Jerry Brown signed into State law in September 2014. The SGMA provides a framework for sustainable management of groundwater supplies by local authorities, with a limited role for State intervention if necessary to protect the resource. The plan is intended to ensure a reliable groundwater supply for California for years to come. The SGMA requires governments and water agencies of high- and medium-priority basins to halt overdrafts of groundwater basins. The Santa Maria River Valley Basin is classified as a very low prioritization basin by the California department of Water Resources (DWR 2025). Because of this, and because the Basin is adjudicated as discussed previously, this basin is not subject to SGMA.

General Construction Activity Stormwater Permit

The *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities*, Order No. 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit), adopted by the SWRCB, regulates construction activity that includes clearing, grading, and excavation resulting in soil disturbance of at least one acre of total land area. The Construction General Permit authorizes the discharge of stormwater to surface waters from construction activities. The Construction General Permit requires that all developers of land where construction activities will occur over more than one acre do the following:

- Complete a Risk Assessment to determine pollution prevention requirements pursuant to the three risk levels established in the Construction General Permit;
- Eliminate or reduce non-stormwater discharges to storm sewer systems and other waters of the United States;
- Develop and implement a Stormwater Pollution Prevention Plan (SWPPP) that specifies Best Management Practices (BMPs) that will reduce pollution in stormwater discharges to the Best Available Technology/Economically Achievable/Best Conventional Pollutant Control Technology standards;
- Perform inspections and maintenance of all BMPs; and
- Conduct stormwater sampling, if required based on risk level.

To obtain coverage in accordance with the Construction General Permit, a project applicant must electronically file all permit registration documents with the SWRCB prior to the start of construction. Permit registration documents must include:

- Notice of Intent, including Risk Level determination;
- Site Drawings and Maps;
- SWPPP;
- Applicable plans, calculations, and other supporting documentation for compliance with existing permitted Phase I or Phase II municipal separate storm sewer system post-construction requirements or the post-construction standards of the Construction General Permit;
- Annual fee per the current 23 California Code of Regulations Chapter 9 fee schedule for NPDES stormwater permits; and
- All applicable additional Permit Registration Document information.

Typical BMPs included in in SWPPPs are designed to minimize erosion during construction, stabilize construction areas, control sediment, and control pollutants from construction materials.

Industrial General Permit

The Industrial General Permit is a regulatory framework issued by SWRCB under the NPDES program. The Industrial General Permit applies to various types of industrial facilities in California identified within the SWRCB's *List of Potentially Regulated Standard Industrial Classification Codes*. These facilities include manufacturing plants, commercial printing, air courier services, refuse systems, and others, which have the potential to discharge stormwater runoff into water bodies. To comply with the Industrial General Permit, the operators of these regulated industrial facilities must implement a SWPPP that outlines measures and BMPs the operator of an industrial facility must implement to prevent stormwater pollution. Operators of facilities regulated by the Industrial General Permit are also required to conduct stormwater monitoring of pollutants including, but not limited to, sediment, metals, oils, and total suspended solids. In addition, the Industrial General Permit requires industrial discharge to comply with TMDL implementation requirements for impaired water bodies.

California Toxics Rule

In May 2000, the USEPA promulgated the California Toxics Rule, which established numeric water quality criteria for toxic pollutants for waters in California. The California Toxics Rule provides water quality criteria for certain potentially toxic compounds for inland surface waters, enclosed bays, estuaries, and waters designated for human health or aquatic life uses. The California Toxics Rule is often used by the RWQCBs when establishing water quality objectives and TMDLs. Although the California Toxics Rule criteria do not apply directly to discharges of stormwater runoff, they are utilized as benchmarks for toxics in urban runoff and to evaluate the potential ecological impacts of stormwater runoff to receiving waters.

Antidegradation Policy

The State Antidegradation Policy (Resolution No. 68-16) was adopted by SWRCB in 1968 to protect surface water and groundwater from degradation. The Antidegradation Policy applies to the disposal of waste to high-quality surface water and groundwater. The Antidegradation Policy requires the water quality of these water bodies be maintained unless SWRCB finds the change will be consistent with maximum benefit to the people of the state, will not unreasonably affect present and anticipated beneficial uses of the waters, and will not result in water quality less than that prescribed in policies regulating water quality. The Antidegradation Policy also requires the best practicable treatment or control of discharges to high-quality waters to assure pollution or nuisance will not occur and the highest possible water quality will be maintained.

c. Local Regulations

Water Quality Control Plan

The Central Coast RWQCB has adopted the *Water Quality Control Plan for the Central Coast Basin* (the Basin Plan), which delineates water resource area boundaries based on hydrological features. For the purposes of achieving and maintaining water quality protection, specific beneficial uses have been identified for each of the surface waters and groundwater management zones described in the Basin Plan. Once beneficial uses are designated, appropriate water quality objectives are established, and

programs that maintain or enhance water quality are implemented to ensure the protection of beneficial uses.

The Basin Plan also established implementation programs to achieve water quality objectives to protect beneficial uses and require monitoring to evaluate the effectiveness of the programs. These objectives must comply with the State antidegradation policy (SWRCB Resolution No. 68-16), which is designed to maintain high-quality waters while allowing some flexibility if beneficial uses are not unreasonably affected.

Groundwater Sustainability Plan

SGMA requires that GSAs prepare Groundwater Sustainability Plans (GSPs) for high and medium priority basins. As discussed above, the Santa Maria River Valley Basin is a very low priority basin (DWR 2025). Because of this, and because the Basin is adjudicated as discussed previously, a groundwater sustainability plan has not been prepared for this basin.

Low Threat Discharge Permit

The Central Coast RWQCB has a general permit for discharges that pose a low threat to water quality (*Waste Discharge Requirements National Pollutant Discharge Elimination System (NPDES) General Permit for Discharges with Limited Threat to Water Quality;* Order No. R3-2022-0035, NPDES No. CAG99304). The permit's provisions cover discharges that contain minimal amounts of pollutants and pose little or no threat to water quality and the environment, including discharges of highly treated groundwater generated during aquifer pumping tests, dual-phase extraction or other remedial pilot tests, excavation dewatering, and pumping to contain groundwater plumes.

Central Coast Regional Water Quality Control Board Post-Construction Stormwater Management Requirements

The Central Coast RWQCB adopted the *Post-Construction Stormwater Management Requirements for Development Projects in the Central Coast Region* (Resolution R3-2013-0032) in July 2013, which outlines runoff reduction and treatment requirements. Specifically, Resolution R3-2013-0032 outlines post-construction requirements for development projects in the Central Coast Region. The post-construction requirements mandate that development projects use Low Impact Development (LID) to detain, retain, and treat runoff. LID incorporates and conserves on-site natural features, together with constructed hydrologic controls to more closely mimic pre-development hydrology and watershed processes.

Santa Maria Municipal Code

The Santa Maria Municipal Code includes Chapter 8-12A Stormwater Runoff Pollution Prevention which regulates stormwater discharge throughout the city. These requirements include the control of the volume, rate, and potential pollutant load of water runoff from new development and redevelopment projects. Additionally, this section requires any person engaged in activities or operations, or owning facilities or property which will, or may, result in pollutants entering storm water, to implement BMPs to reduce the discharge of pollutants through operational activities such as use of chemicals, pressure washing, and car washing. Chapter 8-12A also includes requirements for construction activities to implement BMPs to reduce the release of pollutants and erosion during and immediately following construction activities. In addition to regulating stormwater discharge, Chapter 8-12A of the Santa Maria Municipal Code incorporates the Central Coast RWQBB *Post*

Construction Stormwater Requirements for Development Projects in the Central Coast Region (Resolution R3-2013-0032). Chapter 9-68 Flood Damage Prevention includes regulations to reduce flood losses associated with development in floodplains.

4.5.3 Impact Analysis

a. Methodology and Significance Thresholds

Methodology

The impact analysis is based on an assessment of baseline conditions compared to land use changes and development that would be facilitated by the 2045 General Plan Update. This analysis identifies potential impacts related to hydrology and water quality resulting from construction, operation, and maintenance activities of future development that could occur under the plan. Potential impacts to hydrology and water quality are evaluated based on the adherence to local, State, and federal standards and implementation of BMPs for control of surface runoff and reduction of pollutants in stormwater runoff.

Significance Thresholds

CEQA Guidelines Appendix G provides the following significance thresholds to determine if a project would have a potentially significant impact on hydrology and water quality. For the purposes of this EIR, implementation of the plan may have a significant adverse impact if it would:

1. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality;
2. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin;
3. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
    i. Result in a substantial erosion or siltation on- or off-site;
    ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
    iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
    iv. impede or redirect flood flows;
4. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation; and/or
5. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Impact HYD-1 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD RESULT IN CONSTRUCTION AND OPERATIONAL ACTIVITIES WHICH MAY CONTRIBUTE TO SOIL EROSION AND DEGRADED WATER QUALITY. DEVELOPMENT FACILITATED BY THE PLAN WOULD BE REQUIRED TO ADHERE TO EXISTING NPDES PERMITS AND MUNICIPAL CODE REQUIREMENTS WHICH WOULD MINIMIZE THE POTENTIAL FOR DEVELOPMENT TO DEGRADE WATER QUALITY. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Construction

Future development facilitated by the 2045 General Plan Update would result in construction activities which may contribute to soil erosion and degraded water quality. Construction activities that would disturb one or more acres of land are subject to the NPDES Construction General Permit, which requires the development of a SWPPP developed by a certified Qualified SWPPP Developer. The SWPPP would include project-specific BMPs to control erosion, sediment release, and otherwise reduce the potential for discharge of pollutants from construction into stormwater. Typical BMPs include, but are not limited to, installation of silt fences, erosion control blankets, anti-tracking pads at site exits to prevent off-site transport of soil materials, and good-housekeeping BMPs to prevent leaks and spills. Additionally, all projects would be required to comply with the following policies included in the Safety and Public Facilities and Services Elements:

> **Policy S-3.2 Agricultural runoff reduction.** Work with the County of Santa Barbara to reduce off-site and urban flooding caused by agricultural runoff.
>
> **Policy S-3.3 Low impact design.** Require new development and redevelopment projects to incorporate low -impact design measures for stormwater management, such as bioswales, permeable pavement, and onsite detention ponds.
>
> **Policy S-3.4 Stormwater drainage system.** Maintain and upgrade the City's stormwater drainage system to increase the system's capacity and reduce flooding.
>
> **Policy PFS-3.1 Conveyance of surface drainage**. Convey surface drainage safely through the use of retardation basins, storm drains, recharge basins, and other infrastructure.

These policies would regulate surface drainage on individual project sites and reduce runoff during construction of future development. Additionally, future development would be subject to the Santa Maria Municipal Code Chapter 8-12A which further regulates stormwater discharge. Compliance with these regulations and policies would minimize potential impacts to water quality during construction. Therefore, this impact would be less than significant.

Operation

Operation of future development facilitated by the plan would be required to comply with the provisions of California's Phase II MS4 Permit (for residential and commercial projects) and the Industrial General Permit (for industrial projects). Compliance with these permits would ensure that the amount of polluted stormwater runoff released from development facilitated by the plan would be minimized. This would reduce water quality impacts associated with future development.

As discussed in the Regulatory Setting section above, Chapter 8-12A of the Santa Maria Municipal Code requires the control of the volume, rate, and potential pollutant load of water runoff from new development and redevelopment projects. Additionally, this section requires any person engaged in activities or operations, or owning facilities or property which will, or may, result in pollutants entering storm water, to implement BMPs to reduce the discharge of pollutants through operational activities such as use of chemicals, pressure washing, and car washing. Implementation of these required BMPs would reduce the operational impact of development on surface or groundwater quality. Impacts would be less than significant.

Mitigation Measures

No mitigation measures are required because this impact would be less than significant.

Threshold 2:	Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Impact HYD-2 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD INCREASE THE AMOUNT OF IMPERVIOUS SURFACE AREA AND INCREASE GROUNDWATER DEMAND IN SANTA MARIA. COMPLIANCE WITH THE CENTRAL COAST RWQCB, MUNICIPAL CODE, AND 2045 GENERAL PLAN UPDATE POLICIES WOULD ENSURE THE PROPOSED PLAN WOULD NOT SUBSTANTIALLY DECREASE GROUNDWATER SUPPLIES OR INTERFERE SUBSTANTIALLY WITH GROUNDWATER RECHARGE. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Development facilitated by the plan would incrementally increase the amount of impervious surface area overlying the Santa Maria River Valley Basin within Santa Maria which could reduce the potential for groundwater recharge from surface water infiltration. As discussed in Impact HYD-1, compliance with the City's Municipal Code, as well as the Central Coast RWQCB post-construction requirements for stormwater management would reduce polluted stormwater runoff for new development and redevelopment projects within Santa Maria. The reduction of stormwater runoff can be achieved by increasing on site filtration through bio retention areas would also reduce the amount of impervious surface on the project site and therefore preserve groundwater recharge on site through pervious surfaces.

Development facilitated by the plan would be required to comply with proposed general plan policy S-3.3, listed above under Impact HYD-1, which would require low impact design, including permeable pavement, to be incorporated into new development. This would also further reduce the amount of impervious surface on site thereby preserving groundwater recharge through pervious surfaces.

Furthermore, as discussed in the setting section above, the Santa Maria River Valley Basin is adjudicated. This means that the Santa Maria Valley Management Area has water rights to a set amount of groundwater from the Basin. Development facilitated by the plan would not utilize water that exceeds this allocation and therefore would not substantially decrease groundwater supplies. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation measures are required because this impact would be less than significant.

Threshold 3:	Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: i) Result in a substantial erosion or siltation on- or off-site; ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or iv) impede or redirect flood flows.

Impact HYD-3 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD POTENTIALLY ALTER THE EXISTING DRAINAGE PATTERN ON INDIVIDUAL PROJECT SITES THROUGHOUT THE CITY. DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD BE REQUIRED TO ADHERE TO EXISTING NPDES PERMIT AND MUNICIPAL CODE REQUIREMENTS WHICH WOULD ENSURE DEVELOPMENT WOULD NOT SUBSTANTIALLY ALTER EXISTING DRAINAGE PATTERNS. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Construction

Construction facilitated by the plan would alter the existing drainage patterns of individual project sites which has the potential to cause erosion and flooding, exceed stormwater drainage capacity, provide additional sources of polluted runoff, or alter flood flows. As described in Impact HYD-1, projects subject to the NPDES Construction General Permit would be required to prepare a SWPPP which includes project-specific BMPs to control erosion, sediment release, and otherwise reduce the potential for discharge of pollutants from construction into stormwater.

There are small areas within Santa Maria that would be rezoned under the plan that are within a flood zone, as shown in Figure 4.5-1. Section 9-68.104 of the Santa Maria Municipal Code includes methods of reducing flood losses including the protection of land uses vulnerable to floods from flood damage during construction, controlling the alteration of natural floodplains, and controlling filling, dredging, and other development activities which could increase flood damage. Compliance with these regulations in addition to the existing stormwater runoff regulations described in HYD-1 would reduce the risk of construction activities significantly impeding or redirecting flood flows. Overall, impacts would be less than significant.

Operation

Runoff during operation of development facilitated by the plan would be regulated under the Phase II MS4 Permit and the Industrial General Permit. Projects that create or replace greater than or equal to 2,500 square feet of impervious surface must implement post-construction BMPs and submit a Stormwater Control Plan listing applicable BMPs to the City for review and approval. Pursuant to the Santa Maria Municipal Code, post construction requirements for all non-industrial projects must comply with the RWQCB Central Coast Region Resolution No. R3-2013-0032. Industrial projects must comply with the Industrial General Permit. Compliance with existing regulations would ensure development facilitated by the plan would not substantially alter the existing drainage pattern of a site or area such that substantial erosion or siltation on- or off-site, exceedance of the capacity of existing or planned stormwater drainage systems, or provision of additional sources of polluted runoff would occur.

As discussed above, there are small areas within Santa Maria that would be rezoned under the proposed project that are within a flood zone, as shown in Figure 4.5-1. Future subdivision projects facilitated by the plan would be required to adhere to Section 11-5.07 of the Santa Maria Municipal Code which requires proper drainage of the site including the development of drainage easements for flood control channels, conduits, or laterals inside or abutting the subdivision. Compliance with these regulations in addition to the existing stormwater runoff regulations described in Impact HYD-1 would reduce the risk of construction activities significantly impeding or redirecting flood flows. Overall, impacts would be less than significant.

Mitigation Measures

No mitigation measures are required because this impact would be less than significant.

Threshold 4:	In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

Impact HYD-4 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE MAY OCCUR IN FLOOD HAZARD AREAS. COMPLIANCE WITH APPLICABLE MUNICIPAL CODE REQUIREMENTS AND PROPOSED SAFETY ELEMENT POLICIES WOULD ENSURE DEVELOPMENT WITHIN AREAS SUBJECT TO INUNDATION WOULD BE SITED, DESIGNED, AND CONSTRUCTED AS TO NOT EXACERBATE RISKS FROM RELEASE OF POLLUTANTS FROM INUNDATION. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Santa Maria is approximately 11.4 miles east of the Pacific Ocean. According to the California Department of Conservation, no part of the city is within a tsunami hazard zone (DOC 2025). The city is approximately three miles from Guadalupe Lake. Due to the distance and intervening topography, the city is not at risk of being inundated due to a seiche. Additionally, the city is not within the dam inundation area for Lopez Reservoir or Twitchell Reservoir (California Division of Safety of Dams [DSOD] 2025). As shown in Figure 4.5-1 portions of Santa Maria are within a 100-year or 500-year floodplain. Future development facilitated by the plan in a flood hazard zone would not risk pollutant release due to inundation since the city is not within a dam inundation hazard area. The California Building Code provides guidelines for development within flood hazard areas, including requirements that new development be elevated above the base flood elevations. Section 9-68.104 of the Santa Maria Municipal Code includes methods of reducing flood losses including the protection of land uses vulnerable to floods from flood damage during construction, controlling the alteration of natural floodplains, and controlling filling, dredging, and other development activities which could increase flood damage.

In addition to existing Municipal Code requirements, future development would be required to be consistent with the following proposed general plan policies included in the Safety Element

Policy S-3.1 Santa Maria River Levee development buffer. Require new development and sites undergoing redevelopment to provide a non-development buffer of 60 feet, measured from the toe of the Santa Maria River Levee, to provide access to the Santa Maria River levee for maintenance and repairs.

Policy S-3.5 NFIP participation. Continue to participate in the National Flood Insurance Program (NFIP).

Policy S-3.6 Dam and levee inundation safety. Coordinate with the Santa Barbara County Flood Control District (SBCFCD) and other local and state agencies as required to remain current with dam and levee safety protocols.

Compliance with these policies would reduce flood damage to future development within the floodplain. With adherence to the Santa Maria Municipal Code requirements and General Plan Safety Element policies discussed above, development facilitated by the plan would not risk the release of pollutants due to inundation. Therefore, this impact would be less than significant.

Mitigation Measures

No mitigation measures are required because this impact would be less than significant.

Significance After Mitigation

Less Than Significant without Mitigation

Threshold 5:	Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Impact HYD-5 THERE IS NO SUSTAINABLE GROUNDWATER MANAGEMENT PLANS FOR THE SANTA MARIA VALLEY GROUNDWATER BASIN; HOWEVER, DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD BE SUBJECT TO THE BASIN PLAN. FUTURE DEVELOPMENT FACILITATED BY THE PLAN WOULD NOT CONFLICT WITH THE BASIN PLAN AS IT WOULD BE REQUIRED TO ADHERE TO FEDERAL, STATE, AND LOCAL REGULATIONS TO MINIMIZE WATER QUALITY IMPACTS IN COMPLIANCE WITH THE BASIN PLAN. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

The California Department of Water Resources has designated the Santa Maria River Valley Groundwater Basin as a very low priority basin (DWR 2025). As such there is no sustainable groundwater management plan prepared for this basin. Therefore, the plan would not conflict with a sustainable groundwater management plan.

Santa Maria is in the jurisdiction of the RWQCB Central Coast Region. The RWQCB Central Coast Region's Basin Plan functions as the master water quality control planning document for the region. The Basin Plan includes implementation programs to achieve water quality objectives (RWQCB 2019). As a result, construction of future development facilitated by the plan would be required to implement State and local regulatory requirements, including the provisions of the Construction General Permit, and the Santa Maria Municipal Code. Operations of future development facilitated by the plan would comply with the MS4 Permit, the Industrial General Permit, and the Santa Maria Municipal Code requirements for post-construction stormwater control. These regulatory requirements support the goal of the Basin Plan to minimize adverse impacts to water quality. Therefore, the plan would not conflict with or obstruct the implementation of a water quality control plan. This impact would be less than significant.

Mitigation Measures

No mitigation measures are required because this impact would be less than significant.

Significance After Mitigation

Less Than Significant without Mitigation

4.5.4 Cumulative Impacts

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, *Environmental Setting,* Subsection 3.3, *Cumulative Development*.

By its nature, a general plan considers cumulative impacts insofar as it considers cumulative development that could occur within the City Limits and annexation areas. The analysis in this section examines impacts of the plan on hydrology and water quality throughout the Santa Maria Watershed and the Santa Maria River Valley Groundwater Basin. Cumulative development would gradually increase development and population growth and would therefore increase the potential for impacts to hydrology and water quality, including increased stormwater runoff, erosion, pollutant discharge to waterbodies, increased risk of release of pollutants from inundation, increased demand for groundwater supplies, and decreased groundwater infiltration capacity. Impacts to hydrology and water quality that may be additive in nature, and thus cumulative. Potential cumulative impacts include violation of water quality standards, interference with groundwater recharge, increased erosion, increased non-point source pollution, and increased runoff. Cumulative development would increase erosion and sedimentation resulting from grading and construction, as well as changes in drainage patterns which could degrade surface and ground water quality. In addition, new development would increase the generation of urban pollutants that may adversely affect water quality in the long term.

All new development in the City and annexation areas would be required to comply with applicable water quality regulations. Compliance with these existing requirements would require implementation of BMPs to reduce impacts associated with stormwater and pollutant discharge during construction and operation of projects and reduce adverse changes to hydrology water quality. Therefore, cumulative impacts related to water quality and drainage patterns would be less than significant.

New development throughout the cumulative impact area would increase impervious surfaces and reduce groundwater recharge, but compliance with applicable policies related to impervious surfaces, such as the Central Coast RWQCB post-construction requirements for stormwater management, would reduce the amount of impervious surfaces and preserve groundwater recharge. Therefore, cumulative impacts related to groundwater recharge would be less than significant.

Cumulative development overlying the Santa Maria River Valley Basin would increase the amount of impervious surfaces and could combine with the effects of the development within Santa Maria to potentially reduce groundwater recharge to the basin. However, cumulative development relying on groundwater as a source of water supply would not combine with increased development within Santa Maria to decrease available water supplies in the Santa Maria River Valley Basin because the groundwater basin is adjudicated and the City has a set allotment of groundwater supplies. As a result, cumulative development could not legally utilize excess groundwater beyond the adjudicated allotment, and potential cumulative impacts to groundwater recharge and storage would be less than significant.

Compliance with applicable laws and regulations, such as the California Building Code and Section 9-68.104 of the Santa Maria Municipal Code would regulate development in flood prone areas and minimize the potential for release of pollutants from inundation. Therefore, cumulative impacts related to risk of release of pollutants would be less than significant.

The Santa Maria River Valley Groundwater Basin does not have a sustainable groundwater management plan. However, cumulative development would be subject to compliance with the Water Quality Control Plan for the Central Coast Basin. Cumulative development would be required to comply with the MS4 Permit, the Industrial General Permit, and the Santa Maria Municipal Code. These regulatory requirements support the goal of the Basin Plan to minimize adverse impacts to water quality. Therefore, cumulative impacts would be less than significant with compliance with these regulations.

This page intentionally left blank.

4.6 Noise

This section describes the existing conditions related to noise and vibration in the plan area, as well as the regulatory framework. This section also evaluates the possible impacts related to noise and vibration that could result from implementation of the 2045 General Plan Update. Information included in this section is based on the policies from the plan, the Noise Element of the City's currently adopted General Plan (Santa Maria 2002), Environmental Background Report (Santa Maria 2020) and the Santa Maria Municipal Code (Santa Maria 2024), as well as transportation volume data produced by GHD in June 2025.

4.6.1 Setting

a. Fundamentals of Noise

Sound is a vibratory disturbance created by a moving or vibrating source, which is capable of being detected by the hearing organs. Noise is defined as sound that is loud, unpleasant, unexpected, or undesired and may therefore be classified as a more specific group of sounds. The effects of noise on people can include general annoyance, interference with speech communication, sleep disturbance, and, in the extreme, hearing impairment (Caltrans 2013). Noise levels are commonly measured in decibels (dB) using the A-weighted sound pressure level (dBA). The A-weighting scale is an adjustment to the actual sound pressure levels so that they are consistent with the human hearing response, which is most sensitive to frequencies around 4,000 Hertz and less sensitive to frequencies around and below 100 Hertz. Decibels are measured on a logarithmic scale that quantifies sound intensity in a manner similar to the Richter scale used to measure earthquake magnitudes. A doubling of the energy of a noise source, such as doubling of roadway vehicle volume, would increase the noise level by 3 dBA; reducing the energy in half would result in a 3 dBA decrease (Crocker 2007). Table 4.6-1 shows some representative noise sources and their corresponding noise levels in dBA.

Table 4.6-1 Typical A-Weighted Noise Levels

Indoor Noise Source	Noise Level (dBA)	Outdoor Noise Sources
(Threshold of Hearing in Laboratory)	0	–
Library	30	Quiet Rural Nighttime
Refrigerator Humming	40	Quiet Suburban Nighttime
Quiet Office	50	Quiet Urban Daytime
Normal Conversation at 3 feet	60	Normal Conversation at 3 feet
Vacuum Cleaner at 10 feet	70	Gas Lawn Mower at 100 feet
Hair Dryer at 1 foot	80	Freight Train at 50 feet
Food Blender at 3 feet	90	Heavy-duty Truck at 50 feet
Inside Subway Train (New York)	100	Jet Takeoff at 2,000 feet
Smoke Detector Alarm at 3 feet	110	Unmuffled Motorcycle
Rock Band near stage	120	Chainsaw at 3 feet
–	130	Military Jet Takeoff at 50 feet
–	140	(Threshold of Pain)

Source: Data compiled by Rincon in 2022.

Human perception of noise has no simple correlation with sound energy: the perception of sound is not linear in terms of dBA or in terms of sound energy. When combined, two sources do not "sound twice as loud" as one source. It is widely accepted that the average healthy ear can barely perceive changes of 3 dBA, increase or decrease (i.e., twice the sound energy), that a change of 5 dBA is readily perceptible, and that an increase (or decrease) of 10 dBA sounds twice (half) as loud (Caltrans 2013).

Sound changes in both level and frequency spectrum as it travels from the source to the receiver. The most obvious change is the decrease in sound level as the distance from the source increases. The manner by which noise declines with distance depends on factors such as the type of sources (e.g., point or line), the path the sound travels, site conditions, and obstructions. Noise levels from a point source (e.g., construction, industrial machinery, ventilation units) typically attenuate, or drop off, at a rate of 6 dBA per doubling of distance. Noise from a line source (e.g., roadway, pipeline, railroad) typically attenuates at about 3 dBA per doubling of distance (Caltrans 2013). The propagation of noise is also affected by the intervening ground, known as ground absorption. A hard site, such as a parking lot or smooth body of water, receives no additional ground attenuation and the changes in noise levels with distance (drop-off rate) result simply from the geometric spreading of the source. An additional ground attenuation value of 1.5 dBA per doubling of distance applies to a soft site (e.g., soft dirt, grass, or scattered bushes and trees) (Caltrans 2013).

Noise levels may also be reduced by intervening structures. The amount of attenuation provided by this "shielding" depends on the size of the object and the frequencies of the noise levels. Natural terrain features, such as hills and dense woods, and man-made features, such as buildings and walls, can alter noise levels. Generally, any large structure blocking the line of sight will provide at least a 5 dBA reduction in source noise levels at the receiver.

Noise Descriptors

The impact of noise is not a function of loudness alone. The time of day when noise occurs, its frequency, and the duration of the noise are also important. In addition, most noise that lasts for more than a few seconds is variable in its intensity. Consequently, a variety of noise descriptors have been developed.

One of the most frequently used noise metrics that considers both duration and intensity is the equivalent noise level (L_{eq}). The L_{eq} is defined as the single steady A-weighted level that is equivalent to the same amount of energy as that contained in the actual fluctuating levels over a period of time. Typically, L_{eq} is equivalent to a 1-hour period, even when measured for shorter durations, as the noise level of a 10- to 30-minute period would be the same as the hour if the noise source is relatively steady. L_{max} is the highest root mean square (RMS) sound pressure level within the sampling period, and L_{min} is the lowest RMS sound pressure level within the measuring period. Normal conversational levels at three feet are in the 60- to 65-dBA L_{eq} range and ambient noise levels greater than 65 dBA L_{eq} can interrupt conversations (Federal Transit Administration 2018).

Noise that occurs at night tends to be more disturbing than that which occurs during the day. Community noise is usually measured using Day-Night Average Level (L_{dn} or DNL), which is a 24-hour average noise level with a +10 dBA penalty for noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours, or Community Noise Equivalent Level (CNEL), which is the 24-hour average noise level with a +5 dBA penalty for noise occurring from 7:00 p.m. to 10:00 p.m. and a +10 dBA penalty for noise occurring from 10:00 p.m. to 7:00 a.m. (Caltrans 2013). Noise levels described by DNL and CNEL usually differ by about 0.5 dBA and are, therefore, generally considered to be interchangeable.

Table 4.6-2 briefly defines measurement descriptors and other sound terminology used in this section.

Table 4.6-2 Sound Terminology

Term	Definition
Sound	A vibratory disturbance created by a vibrating object which, when transmitted by pressure waves through a medium such as air, can be detected by a receiving mechanism such as the human ear or a microphone.
Noise	Sound that is loud, unpleasant, unexpected, or otherwise undesirable.
Ambient Noise	The composite of noise from all sources near and far in a given environment.
Decibel (dB)	A unitless measure of sound on a logarithmic scale, which represents the squared ratio of sound-pressure amplitude to a reference sound pressure. The reference pressure is 20 micropascals, representing the threshold of human hearing (0 dB).
A-Weighted Decibel (dBA)	An overall frequency-weighted sound level that approximates the frequency response of the human ear.
Equivalent Noise Level (L_{eq})	The average sound energy occurring over a specified time period. In effect, L_{eq} is the steady-state sound level that in a stated period would contain the same acoustical energy as the time-varying sound that actually occurs during the same period.
Ambient Noise	The composite of noise from all sources near and far in a given environment.
Maximum and Minimum Noise Levels (L_{max} and L_{min})	The maximum or minimum instantaneous sound level measured during a measurement period.
Day-Night Level (DNL or L_{dn})	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the A-weighted sound levels occurring between 10:00 p.m. and 7:00 a.m. (nighttime).
Community Noise Equivalent Level (CNEL)	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added to the A-weighted sound levels occurring between 7:00 p.m. and 10:00 p.m. and 10 dB added to the A-weighted sound levels occurring between 10:00 p.m. and 7:00 a.m.

b. Overview of Groundborne Vibration

In environmental analysis, groundborne vibration of concern consists of the oscillatory waves that move from a source through the ground to adjacent structures. The number of cycles per second of oscillation comprises the vibration frequency, described in terms of hertz. The frequency of a vibrating object describes how rapidly it oscillates. Typically, groundborne vibration generated by human activities attenuates rapidly with distance from the source of the vibration.

While people have varying sensitivities to vibrations at different frequencies, in general they are most sensitive to low-frequency vibration. Vibration in buildings, such as from nearby construction activities, may cause windows, items on shelves, and pictures on walls to rattle. Vibration of building components can also take the form of an audible low-frequency rumbling noise, referred to as groundborne noise. Groundborne noise is usually only a problem when the originating vibration spectrum is dominated by frequencies in the upper end of the range (60 to 200 hertz), or when foundations or utilities, such as sewer and water pipes, physically connect the structure and the vibration source (FTA 2018). Although groundborne vibration is sometimes noticeable in outdoor environments, it is almost never annoying to people who are outdoors. The primary concern from vibration is that it can be intrusive and annoying to building occupants and vibration-sensitive land uses.

Vibration energy spreads out as it travels through the ground, causing the vibration level to diminish with distance away from the source. High-frequency vibrations diminish much more rapidly than low frequencies, so low frequencies tend to dominate the spectrum at large distances from the source. Discontinuities in the soil strata can also cause diffractions or channeling effects that affect the propagation of vibration over long distances (Caltrans 2020). When a building is impacted by vibration, a ground-to-foundation coupling loss will usually reduce the overall vibration level. However, under rare circumstances, the ground-to-foundation coupling may amplify the vibration level due to structural resonances of the floors and walls.

Vibration amplitudes are usually expressed in peak particle velocity (PPV). The PPV is normally described in inches per second (in/sec). PPV is defined as the maximum instantaneous positive or negative peak of a vibration signal. PPV is often used in monitoring of blasting vibration and other construction activity because it is related to the stresses that are experienced by buildings (Caltrans 2020).

c. Sensitive Receptors

The current Santa Maria General Plan Noise Element identifies noise-sensitive land uses as residential areas (including single-family, duplex, multiple-family, and mobile home), motels/hotels, schools, libraries, hospitals, nursing homes, and places of worship (City of Santa Maria 2009), shown in Figure 4.6-1. Note, the figure is intended to support City decision-making and should not be read as representing precise, site-specific conditions or all existing noise sensitive land uses.

Vibration-sensitive receivers, which are similar to noise-sensitive receivers, include residences and institutional uses, such as schools, churches, and hospitals. However, vibration-sensitive receivers also include buildings where vibrations may interfere with vibration-sensitive equipment that is affected by vibration levels that may be well below those associated with human annoyance (e.g., recording studies or medical facilities with sensitive equipment).

d. Existing Noise Environment

Aviation

Airport noise associated with Santa Maria Airport operations is an additional noise source in the plan area. The Santa Maria Airport is located in the southern portion of the plan area, with flightpaths from the airport's runway being located in the plan area. Aircraft following these flightpaths would not generate substantial noise over the plan area. As shown in Figure 4.6-2, the airport 60-65 dBA CNEL noise contours adopted by the Santa Barbara County Airport Land Use Commission extend primarily over areas of the plan area that are primarily agriculture or open space.

The annual air show takes place over a few days in the fall exposes the area to higher-than-typical noise. In addition, military aircraft occasionally utilize the Santa Maria Airport for training. These temporary events do not have their own noise contours, as they are not considered part of the regular use of the Santa Maria Airport.

Roadways

The City's primary source of noise is traffic-related from on-road vehicles and trucks. Vehicular noise has three main component sources: engine/ transmission noise, exhaust noise, and tire noise. US-101, SR-135 (Orcutt Expressway/Broadway), SR-166 (Main Street) and Betteravia Road are some of

the main roadways of concern related to noise because they carry high traffic volumes. Since the US-101 travels through Santa Maria in the central portions of the City, it produces traffic noise that affects much of the area within the City. The Federal Highway Administration (FHWA) model RD-77-108 predicts noise levels through a series of adjustments to a reference sound level. These adjustments account for distances from the roadway, roadway vehicle volumes, vehicle speeds, car/truck mix, number of lanes, and road width. Table 4.6-3 provides existing roadway vehicle noise along roadways in the plan area. Figure 4.6-3 shows the existing 60, 65, and 70 dBA CNEL noise contours from roadways and highways in the plan area.

Table 4.6-3 provides existing roadway vehicle noise levels a distance of 50 feet from roadway segments in the plan area. Roadway vehicle noise impacts are analyzed based on average daily trip (ADT) roadway volume for existing conditions provided by GHD (GHD 2025), as well as data regarding speeds and number of lanes. Traffic noise modeling data are contained in Appendix C.

Table 4.6-3 Existing Traffic Noise Levels Along Roadway Segments

Roadway	Segment	Existing ADT	Existing Traffic Noise Level at 50 feet (dBA CNEL)

4.6.2 Regulatory Setting

a. Federal Regulations

Federal noise standards established by the U.S. Department of Housing and Urban Development (HUD) are applicable to residential projects that receive funding from HUD. These standards are presented in 24 Code of Federal Regulations (CFR) Part 51. New construction proposed in high noise areas (exceeding 65 dBA L_{dn}) must incorporate noise attenuation features to maintain acceptable interior noise levels. A goal of 45 dBA L_{dn} is set forth for interior noise levels and attenuation requirements are geared toward achieving that goal. It is assumed that with standard construction, any building will provide sufficient attenuation to achieve an interior level of 45 dBA L_{dn} or less if the exterior level is 65 dBA L_{dn} or less. Approvals in a "normally unacceptable noise zone" (exceeding 65 dBA, but not exceeding 75 dBA) require a minimum of 5 dBA of additional noise attenuation for buildings having noise sensitive uses (e.g., residences) if the day-night average is greater than 65 dBA, but does not exceed 70 dBA, or a minimum of 10 dBA of additional noise attenuation if the day-night average is greater than 70 dBA, but does not exceed 75 dBA.

There are additional federal regulations that influence the audible landscape, especially for projects where federal funding is involved. For example, the FHWA requires abatement of highway traffic noise for highway projects through rules in the Code of Federal Regulations (23 CFR Part 772), the FTA, and Federal Railroad Administration (FRA). Each agency recommends thorough noise and vibration assessments through comprehensive guidelines for any highway, mass transit, or high-speed railroad projects that would pass by residential areas.

b. State Regulations

California Government Code Section 65302 encourages each local government entity to implement a noise element as part of its general plan. In addition, the Office of Planning and Research (OPR) has developed guidelines for preparing noise elements, which include recommendations for evaluating the compatibility of various land uses as a function of community noise exposure.

California Building Code

California Code of Regulations Title 24, Building Standards Administrative Code, Part 2, Chapter 12, and the California Building Code codify the State noise insulation standards. These noise standards apply to new construction in California to control interior noise levels as they are affected by exterior noise sources and interior noise sources from separate areas. The regulations specify that interior noise levels shall not exceed 45 dBA CNEL/L_{dn} in any habitable room, as well as specifying sound transmission class requirements for walls, floors, and ceilings around sleeping units.

California Green Building Code

California Green Building Standards Code 2022 (CALGreen) Section 5.507.4, Acoustical Control, regulates construction of non-residential uses within the 65 dBA CNEL/L_{dn} contour of an airport, freeway, expressway, railroad, industrial noise source, or other fixed source. According to Section 5.507.4.1-2 “buildings exposed to a noise level of 65 dBA L_{eq}(1-hr) during any hour of operation shall employ sound-resistant assemblies as determined by a prescriptive method or performance method.”

Projects may demonstrate compliance through the prescriptive method if wall and roof-ceiling assemblies exposed to the noise source meet a composite sound transmission class rating of at least 50 or a composite outdoor/indoor transmission class rating of no less than 40, with exterior windows of a minimum sound transmission class of 40 or outdoor/indoor transmission class of 30. Projects may demonstrate compliance through the performance method if wall and roof-ceiling assemblies exposed to the noise source are constructed to provide an interior noise environment that does not exceed 50 dBA L_{eq}(1-hr) in occupied areas during hours of operations.

c. Local Regulations

Santa Maria General Plan Noise Element

The current Noise Element of the Santa Maria General Plan has established the following exterior noise standards, shown in Table 4.6-4

Table 4.6-4 City of Santa Maria Interior and Exterior Noise Standards

		Standard (dBA CNEL)	
Land Use Category	**Uses**	**Interior**	**Exterior**
Residential	Single Family, Duplex, Multiple Family, Mobile Home	45	60
Noise-Sensitive Land Uses	Motel, Hospital, School, Nursing Home, Church, Library, and Other	45	60
Commercial	Retail, Restaurant, Professional Offices	55	65
Industrial	Manufacturing, Utilities, Warehousing, Agriculture	65	70
Open Space	Passive Outdoor Recreation	–	65

Source: City of Santa Maria General Plan Noise Element, Table N-4

Santa Maria Municipal Code

Chapter 5-5 of the Santa Maria Municipal Code establishes certain policies to control unnecessary, excessive, and annoying noise in the city in the interest of public health and welfare. Municipal Code Section 5-5.04(a) states that a violation of the Noise Ordinance exists when the noise level exceeds the ambient noise level or the ambient base noise level, whichever is higher, as follows:

- By any amount for 30 minutes for any given hour, measured cumulatively;
- By five dBA for 15 minutes for any given hour;
- By 10 dBA for five minutes for any given hour;
- By 20 dBA at any time.

Table 4.6-5 shows the ambient base noise levels for residential, commercial, and industrial zones.

Table 4.6-5 Range of Intensities – Ambient Base Noise Level (dBA L_{eq})

Zones	Daytime (7:00 a.m. to 10:00 p.m.)	Nighttime (10:00 p.m. to 7:00 a.m.)
Residential	55	45
Commercial	65	60
Industrial	75	70

dBA = A-weighted decibel; L_{eq} = equivalent sound level

Source: Municipal Code Section 5-5.05, 2024.

Municipal Code Section 5-5.06(e) states that construction noise generated outside the hours of 7:00 a.m. and 6:00 p.m. on Monday through Friday or outside the hours of 8:00 a.m. and 6:00 p.m. on Saturdays and Sundays (unless otherwise allowed by permit issued by the Noise Control Officer) is considered nuisance noise.

Municipal Code Section 5-5.09 requires the acquisition of a construction noise permit from the Noise Control Officer for exterior construction work conducted within a residential zone or within 500 feet of a residential zone only if such activities exceed the noise standards set forth in Municipal Code Sections 5-5.03 and 5-5.05. The permit would cover short-term or occasional, non-routine operations.

Municipal Code Section 12-7.14(a) allows outdoor living areas in R-2 and R-3 multifamily zones to exceed typical noise standards up to "Normally Unacceptable" levels (75 dB or more), provided residents receive a notice warning that the area regularly experiences elevated urban noise from sources such as traffic, trains, aircraft, industry, and general activity.

Municipal Code Section 12-49.09(c) prohibits vibration above the perception threshold of an individual at or beyond the property boundary of the source for more than three minutes in any one hour of the day between the hours of 7:00 a.m. and 10:00 p.m. and for more than 30 seconds in any one hour between the hours of 10:00 p.m. and 7:00 a.m.

4.6.3 Impact Analysis

a. Methodology and Significance Thresholds

Methodology

Construction Noise

Construction noise that could result from future development facilitated by the plan is estimated based on reference noise levels published by the FTA.

Groundborne Vibration

Future development facilitated by the plan would not include substantial vibration sources associated with operation such as railroads and subways. Construction activities have the greatest potential to generate groundborne vibration affecting nearby noise-sensitive receptors. Groundborne vibration levels that could occur due to future development facilitated by the plan are estimated based on reference vibration levels published by the FTA.

Operational Stationary Noise

Stationary noise sources (i.e., on-site operational noise) for future development facilitated by the plan were analyzed in context of typical mechanical equipment on commercial, industrial, residential, and mixed-use development such as heating, ventilation, and air conditioning (HVAC) units.

Traffic Noise

Roadway vehicle noise levels for the plan were estimated using the FHWA roadway vehicle noise prediction model RD-77-108 methodology. Roadway vehicle noise impacts are analyzed based on ADT roadway volume for existing conditions and the amount of growth expected from future

development facilitated by the plan, as well as data regarding speeds and number of lanes. The FHWA model predicts noise levels through a series of adjustments to a reference sound level. These adjustments account for distances from the roadway, roadway vehicle volumes, vehicle speeds, car/truck mix, number of lanes, and road width.

This analysis utilizes the ADT volumes and trip distribution data produced by GHD for the plan area.

Significance Thresholds

The City of Santa Maria utilizes the following 2025 *CEQA Guidelines* Appendix G significance criteria questions related to Noise.

1. A substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
2. The generation of excessive groundborne vibration or groundborne noise levels;
3. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, the exposure of people residing or working in the project area to excessive noise levels.

Construction Noise

Although the Municipal Code has established hours of construction in Section 5-5.06(e) and requirements for the acquisition of construction noise permits in Section 5-5.09, the City of Santa Maria has not adopted a quantitative threshold for evaluating environmental impacts of construction noise. Therefore, this analysis relies on criteria established by FTA for assessing construction noise impacts based on the potential for adverse community reaction in its *Transit and Noise Vibration Impact Assessment Manual* (FTA 2018). For noise-sensitive receptors such as residential and school uses, the daytime noise threshold is 80 dBA L_{eq} for an 8-hour period.

Groundborne Vibration

The City has not adopted a significance threshold to assess groundborne vibration impacts during construction and operation. Therefore, FTA criteria are used to evaluate potential groundborne vibration impacts related to potential building damage from construction (FTA 2018). Construction vibration impacts from development would be significant if vibration levels exceed the FTA criteria shown in Table 4.6-6

Table 4.6-6 Vibration-Related Building Damage Thresholds

Building Category	PPV (in/sec)
I. Reinforced-concrete, steel or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

PPV = peak particle velocity

in/sec = inches per second

L_v = root mean square velocity in decibels (VdB) re 1 micro-inch/second

Source: FTA 2018

Operational Stationary Noise

The City has adopted noise standards in the Municipal Code that regulate operational stationary noise sources in the City. Operational noise would result in a significant impact if it exceeds the ambient base noise levels established for residential/noise-sensitive uses as shown in Table 4.6-5.

Traffic Noise

Although the City of Santa Maria does not have specific noise level criteria for assessing traffic noise impacts, a project is typically assumed to have a significant impact on the environment related to traffic noise if it would substantially increase the ambient noise levels for adjoining areas. The following thresholds of significance are similar to those recommended by the Federal Aviation Administration (FAA) (FICON 2020), which use criteria based on transportation noise increases and are commonly applied to roadway traffic noise analyses under CEQA. A significant impact would occur if traffic noise increases the existing noise environment by the following:

- Greater than 1.5 dBA CNEL increase for ambient noise environments of 65 dBA CNEL and higher
- Greater than 3 dBA CNEL increase for ambient noise environments of 60-64 dBA CNEL
- Greater than 5 dBA CNEL increase for ambient noise environments of less than 60 dBA CNEL

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Impact NOI-1 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD RESULT IN CONSTRUCTION NOISE THAT MAY IMPACT NEARBY NOISE-SENSITIVE LAND USES. THE PLAN WOULD INTRODUCE NEW NOISE SOURCES AND CONTRIBUTE TO AN INCREASE IN LONG-TERM OPERATIONAL NOISE LEVELS WITHIN THE CITY LIMIT AS WELL AS THE ANNEXATION AREA. IMPLEMENTATION OF REQUIRED NOISE-REDUCTION MITIGATION, AS WELL AS POLICIES AND ACTIONS IN THE PLAN, WOULD MINIMIZE DISTURBANCE TO NOISE-SENSITIVE LAND USES. HOWEVER, THERE ARE NO FEASIBLE MITIGATION MEASURES THAT WOULD AVOID OR FULLY MITIGATE FOR THE INCREASE IN CONSTRUCTION AND TRAFFIC NOISE IN THE PLAN AREA. AS A RESULT, THIS WOULD BE A SIGNIFICANT AND UNAVOIDABLE IMPACT.

Construction

Noise from future development facilitated by the 2045 General Plan Update would temporarily increase noise levels at nearby noise-sensitive receptors. Construction activities would generate noise from phases such as demolition, site preparation, grading, building construction, and paving activities. Each phase of construction has a specific equipment mix and associated noise characteristics, depending on the equipment used during that phase. Construction noise would typically be higher during the more equipment-intensive phases of initial construction (i.e., demolition, site preparation, and grading work) and would be lower during the later construction phases (i.e., building construction and paving). Since project-level details are not currently available for future projects that would be carried out under the plan, it is not possible to determine exact noise levels, locations, or time periods for construction of such projects, or construction noise at adjacent properties. However, Table 4.6-7 illustrates typical noise levels associated with construction equipment at a distance of 50 feet and 100 feet from construction noise sources.

Table 4.6-7 Typical Noise Levels for Construction Equipment

Equipment	Estimated Noise Levels at Nearest Sensitive Receptors (dBA L_{eq})	
	50 feet	100 feet
Air Compressor	80	74
Backhoe	80	74
Concrete Mixer	85	79
Dozer	85	79
Grader	85	79
Jack Hammer	88	82
Loader	80	74
Paver	85	79
Pile-drive (Impact)	101	95
Pile-driver (Sonic)	95	89
Roller	85	79
Saw	76	70
Scarified	83	77
Scraper	85	79
Truck	84	78

Source: Federal Transit Administration (FTA). 2018. *Transit Noise and Vibration Impact Assessment*. November.

Noise would typically drop off at a rate of about 6 dBA per doubling of distance. Therefore, noise levels would be about 6 dBA lower than shown in Table 4.6-7 at 200 feet from the noise source and 12 dBA lower at a distance of 400 feet from the noise source. The construction noise levels shown in Table 4.6-7 may exceed the daytime noise threshold for noise-sensitive receptors of 80 dBA L_{eq} for an 8-hour period, depending on the equipment used and the distance in which the equipment is operating compared to noise-sensitive receptors.

The 2045 General Plan Update includes the following policy and actions intended to reduce the exposure of noise-sensitive receptors to temporary and construction noise:

> **Policy N-3.1: Construction noise mitigation.** Limit construction noise in residential areas to reduce noise impacts, especially in the early morning, late evening, weekends, and during holidays.
>
> > **Action N-3.11:** Develop criteria to clearly define conditions of approval for nighttime construction activities that will balance project requirements and minimize community disturbance and update the Noise Ordinance accordingly to establish approval criteria and thresholds for determining the need for additional noise attenuation strategies.
> >
> > **Action N-3.12:** Revise the Noise Ordinance to require appropriate noise attenuation strategies for any approved nighttime construction to minimize disturbance to the greatest extent feasible.
> >
> > **Action N-3.13:** Update the Noise Ordinance to require the use of mufflers on construction equipment and maintain physical separation of machinery maintenance areas from nearby residential areas.

Implementation of Policy N-3.1 and Actions N-3.11, N-3.12, and N-3.13, would reduce construction noise impacts associated with future development facilitated by the plan. However, as details of future construction activities are unknown at this time, construction noise could still exceed the daytime significance threshold or require activity during the more sensitive nighttime hours (e.g., concrete pours or pumps that need to run overnight for water resources projects). Consequently, construction noise impacts may exceed the daytime noise threshold for noise-sensitive receptors of 80 dBA Leq for an 8-hour period in many cases. Therefore, this impact would be potentially significant and Mitigation Measure NOI-1 would be required. It should be noted that the identification of this program-level impact does not preclude the finding of less-than-significant construction noise impacts for subsequent projects analyzed at the project level.

Operation

STATIONARY OPERATIONAL NOISE

Stationary operational sources of noise from future development facilitated by the plan are expected to include air conditioning units, loading dock activities, outdoor restaurant dining and music activities, and parking lot vehicle movements. Special noise generators such as music (live or otherwise), sound amplification devices, and tenant-specific noise sources would require a site-specific noise analysis prior to building permit approval.

The 2045 General Plan Update includes the following policy and actions intended to minimize potential adverse noise-related impacts from stationary sources.

> **Policy N-1.4: Stationary Noise Sources.** Ensure outdoor machinery, appliances, and other noise-generating devices are located away from noise-sensitive uses and mitigated to reduce exposure to intrusive noise.
>
> > **Action N-1.4.1:** Update the Municipal Code to require mixed-use and commercial development applicants to locate noise-generating components such as loading areas, mechanical equipment, and other similar facilities as far from residential units as possible.
> >
> > **Action N-1.4.2:** Update the Municipal Code to establish a threshold for requiring additional noise buffering of machinery to reduce intrusive noise from new development. Such buffering may include, but is not limited to, acoustic paneling, sound-absorbing materials, and enclosures.

Implementation of these policies and actions would ensure that noise from new development is analyzed and avoided or mitigated to acceptable levels prior to approval of projects with the potential to generate noise from stationary sources, such as operational use of residential-scale air conditioning units, loading dock activities, outdoor restaurant dining and music activities, parking lot vehicle movements, and commercial and industrial equipment. Additionally, this would apply to special noise generators such as music (live or otherwise), sound amplification devices, and tenant-specific noise sources. Therefore, the plan's stationary operational noise impact would be less than significant.

MOBILE OPERATIONAL NOISE

Future development facilitated by the plan would allow additional development to occur within the city limit as well as in the annexation area, which would generate new vehicle trips that may increase the exposure of land uses along roadways to traffic noise. Figure 4.6-4 shows the 60, 65, and 70 dBA CNEL noise contours from roadways and highways for future (year 2050) roadway

vehicle scenarios. The complete distances (shown in feet) to the 60, 65, and 70 dBA CNEL noise contours from the center of each roadway segment are included in Appendix C. Table 4.6-8 shows the estimated increase in roadway vehicle noise on study roadway segments compared to existing conditions at 50 feet from the centerline of the nearest travel lane.

As shown in Table 4.6-8, significant traffic noise increases are anticipated along multiple roadway segments within the city limits as discussed in Section 4.6.3(a), Methodology and Significance Thresholds. Furthermore, roadway segments located within the annexation area, shown in Figure 4.6-4, were not analyzed as they are not currently within Santa Maria city limits. At the time an individual project is proposed within the annexation area, it would be required to undergo individual environmental review to determine potential noise impacts of the individual project. Along all other roadway study segments, traffic noise increases would be less than significant.

The 2045 General Plan Update includes the following policies and actions that would reduce roadway vehicle noise:

Policy N-2.1: Major thoroughfare noise mitigation. Require future development and redevelopment to implement feasible noise mitigation measures along major thoroughfares like Main Street, Broadway, and U.S. Highway 101.

Action N-2.1.1: Coordinate with the California Department of Transportation to effectively attenuate State freeway and roadway noise through the use of 'quiet' paving materials, placement of noise barriers, berms, and landscaped open space within State right-of-way ~~for existing residences~~ and incorporating design features in new development to reduce future noise level increases.

Action N-2.1.2: Work with the California Department of Transportation to ensure adequate noise studies are prepared and noise mitigation measures are considered in State transportation projects

Action N-2.1.3: Regularly update the noise contour map to reflect changes in ambient noise levels from transportation sources as airport and roadway conditions and patterns within the city evolve.

Action N-2.1.4: Update the City's Municipal Code to require new residential and mixed-use development within the 60 dBA CNEL noise contours or higher of transportation corridors to submit an acoustical analysis and incorporate noise reduction strategies, such as vegetation buffers and physical sound barriers, as necessary to meet the requirements of the Noise Ordinance.

Policy N-2.2: Industrial and agricultural traffic noise reduction measures. Evaluate and identify measures and strategies to reduce traffic noise from industrial and agricultural truck traffic, and coordinate with local businesses to implement the measures and strategies as needed.

Action N-2.2.1: Coordinate with businesses to identify possible limitations on local truck traffic, including loading and unloading, specific routes, times, and speed limits appropriate for each zoning district, while ensuring compatibility with essential business operations.

Action N-2.2.2: Work with local businesses, Public Works, and law enforcement to minimize traffic noise by encouraging the use of preferred routes and delivery times.

Policy N-~~1.1~~2.4: Roadway vehicle noise reduction measures. Require projects that may result in a substantial increase in roadway traffic noise on area roadways to implement measures designed to reduce noise and minimize the impact on noise-sensitive land uses.

Action N-~~1.1~~2.4.1: Where cumulative roadway traffic noise would exceed the applicable traffic noise increase standards, require applicants for new development projects to retain a qualified acoustical consultant to prepare a Traffic Noise Reduction Study that specifies, at a minimum, the specific locations, extent, height of sound walls, and other design details ~~such as "quiet pavement" to reduce traffic noise impacts at impacted roadways~~. Project specific environmental documents may adjust recommended noise reduction measures as necessary to respond to site specific conditions.

Action N-~~1.1~~2.4.2: For locations where a Traffic Noise Reduction Study identifies a need for sound barriers, require developers to contribute their fair share toward constructing new sound barriers (e.g., walls or solid fences) along ~~impacted~~ roadways where there are no driveways that would break continuity and along the residential portions or other sensitive receiver locations of such roadways. The study shall identify the appropriate sound barrier to reduce the noise impacts on the proposed development. ~~Sounds barriers should be continuous from grade to top, with no cracks or gaps, and have a minimum surface density of four pounds per square foot and a minimum height of six feet, as measured from the base elevation.~~

~~**Action N-1.1.3**: For locations where a Traffic Noise Reduction Study identifies a need for roadway improvements to reduce roadway traffic noise where sound barriers are determined not to be feasible, require developers to contribute their fair share toward installation of "quiet pavement" roadway improvements, such as rubberized asphalt or open-grade asphalt concrete overlays.~~

Implementation of these policies and actions would reduce operational vehicle trips and associated operational traffic noise to the extent feasible. However, the plan does not include policies or actions that could ensure traffic noise would be below the thresholds of significance. As a result, the potential increase in traffic noise would be a potentially significant impact.

Mitigation Measures

NOI-1 Conditions of Approval to Reduce Construction Noise

The City of Santa Maria shall review future developments within 500 feet of a sensitive receptor, and where applicable, require construction contractors to implement the following feasible measures as standard conditions of approval. Construction plans submitted to the City shall include construction noise analysis and identify these measures on demolition, grading, and construction plans submitted to the City. The City of Santa Maria Building Division shall verify that grading, demolition, and/or construction plans submitted to the City include these notations prior to issuance of demolition, grading and/or building permits. Project specific environmental documents may adjust recommended noise reduction measures as necessary to respond to site specific conditions.

- **Mufflers.** During excavation and grading construction phases, all construction equipment, fixed or mobile, shall be operated with closed engine doors and shall be equipped with properly operating and maintained mufflers consistent with manufacturers' standards.

- **Stationary Equipment.** All stationary construction equipment shall be placed so that emitted noise is directed away from the nearest sensitive receptors.
- **Equipment Staging Areas.** Equipment staging shall be located in areas that will create the greatest distance feasible between construction-related noise sources and noise-sensitive receptors.
- **Smart Back-up Alarms.** Mobile construction equipment shall have smart back-up alarms that automatically adjust the sound level of the alarm in response to ambient noise levels. Alternatively, back-up alarms shall be disabled and replaced with human spotters to ensure safety when mobile construction equipment is moving in the reverse direction in compliance with applicable safety laws and regulations.
- **Electrically-Powered Tools and Facilities.** Electrical power shall be used to run air compressors and similar power tools and to power any temporary structures, such as construction trailers or caretaker facilities, where feasible.
- **Noise Disturbance Coordinator**. The project applicant shall designate a "noise disturbance coordinator" responsible for responding to any local complaints about construction noise. The disturbance coordinator shall determine the cause of any noise complaint and shall require that reasonable measures be implemented to correct the problem. A telephone number for the disturbance coordinator and the City shall be posted at the construction site.
- **Temporary Noise Barriers.** Erect temporary noise barriers, where feasible, when construction noise is predicted to exceed the acceptable standards (e.g., 80 dBA L_eq at residential receptors, schools or other sensitive receptors during the daytime) or when the anticipated construction duration is greater than is typical (e.g., two years or greater). Temporary noise barriers shall be constructed with solid materials (e.g., wood) with a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier. If a sound blanket is used, barriers shall be constructed with solid material with a density of at least 1 pound per square foot with no gaps from the ground to the top of the barrier and be lined on the construction side with acoustical blanket, curtain or equivalent absorptive material rated sound transmission class (STC) 32 or higher.

Significance After Mitigation

Implementation of Mitigation Measure NOI-1, as well as implementation of policies and actions in the 2045 General Plan Update, would reduce potential impacts from noise during construction and operation by reducing noise source impacts, creating sound barriers where required/necessary, and promoting the reduction in traffic noise by projects included in the plan. These policies would help reduce the amount of traffic noise increases to the extent feasible. However, as details from individual development facilitated by the plan are unknown at this time, there is no feasible mitigation that would avoid or fully mitigate for the increase in construction and traffic noise in the plan area. As a result, potential construction noise impacts and operational traffic noise impacts would remain significant and unavoidable.

Operational stationary noise impacts would be less than significant without mitigation.

Threshold 2: Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Impact NOI-2 CONSTRUCTION ACTIVITY FROM BUILDOUT OF THE 2045 GENERAL PLAN UPDATE WOULD GENERATE GROUNDBORNE VIBRATION, POTENTIALLY AFFECTING NEARBY LAND USES. IMPLEMENTATION OF REQUIRED MITIGATION, AS WELL AS POLICIES AND ACTIONS IN THE PLAN, WOULD ENSURE VIBRATION LEVELS WOULD NOT EXCEED APPLICABLE THRESHOLDS FOR BUILDING DAMAGE. THEREFORE, THIS IMPACT WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

Construction

Future development facilitated by the 2045 General Plan Update would involve construction activity that could intermittently generate groundborne vibration affecting nearby properties. Table 4.6-9 lists groundborne vibration levels from various types of construction equipment at various distances.

Table 4.6-9 Vibration Source Levels for Construction Equipment

Equipment		Approximate Vibration Level (in/sec PPV)			
		25 feet from Source	50 feet from Source	100 feet from Source	200 feet from Source
Caisson Drilling		0.089	0.031	0.011	0.004
Jackhammer		0.035	0.012	0.004	0.002
Large Bulldozer		0.089	0.031	0.011	0.004
Loaded Truck		0.076	0.027	0.010	0.003
Pile Driver (impact)	Upper range	1.519	0.537	0.190	0.067
	Typical	0.644	0.228	0.081	0.028
Pile Driver (sonic)	Upper range	0.734	0.260	0.092	0.032
	Typical	0.170	0.060	0.021	0.008
Small Bulldozer		0.003	0.001	<0.001	<0.001
Vibratory Roller		0.21	0.074	0.026	0.009

Source: Federal Transit Administration (FTA). 2018. *Transit Noise and Vibration Impact Assessment*. November.

As shown in Table 4.6-9, buildings and structures could experience the strongest vibration during the use of pile-drivers and vibratory rollers. Vibration levels from pile-drivers could approach 1.519 in/sec PPV at a distance of 25 feet from the source and 0.190 in/sec at 100 feet, and vibration levels from vibratory rollers could approach 0.21 in/sec PPV at a distance of 25 feet and 0.026 at 100 feet. The threshold for historic structures is 0.12 in/sec PPV; the threshold is higher for residential buildings at 0.2 in/sec PPV. Vibration levels from typical equipment, such as bulldozers and jackhammers, would not exceed the applicable thresholds for historic structures and residential buildings at a distance of 25 feet or greater. However, vibration levels from pile driving equipment and vibratory rollers may exceed the FTA thresholds.

Because project-level details are not currently available for future individual development facilitated by the plan, it is not possible to determine which projects may use pile driving or vibratory rollers and their exact vibration levels, locations, or time periods for construction of such projects. As a result, construction vibration levels may exceed the FTA's vibration levels for preventing architectural building damage.

The 2045 General Plan Update includes the following goal and policies intended to minimize groundborne vibration associated with construction activity:

Goal N-4: Vibration. The impacts of excessive ground-borne vibration from temporary and ongoing operations are limited.

> **Policy N-4.1.1:** Update the Municipal Code to require new vibration-sensitive uses within 200 feet of a potential vibration-causing source, including the Santa Maria Valley Railroad, to prepare a ground-borne vibration and noise assessment consistent with Federal Transit Administration-recommended methodology and criteria.
>
> ~~**Policy N-4.1.2: Ground-borne vibration mitigation.** Update the Municipal Code to establish building architectural and structural thresholds to prevent building damage from vibration.~~

Implementation of Policy N-4.1.1 and N-4.1.2 would reduce construction groundborne vibration impacts associated with future development facilitated by the plan. However, as project-level details of future construction activities are unknown at this time, it is not possible to determine which projects may use pile driving or vibratory rollers and their exact vibration levels, locations, or time periods for construction of such projects. Construction vibration levels may exceed the FTA's vibration levels for preventing architectural building damage. Therefore, groundborne vibration levels associated with construction activity may exceed the FTA's standards for building damage, resulting in a potentially significant impact requiring Mitigation Measure NOI-2.

Operation

New residential, commercial, industrial, and retail development facilitated by the plan would not involve substantial operational vibration sources such as railroads and subways. In addition, implementation of the plan would not directly increase rail activity in the plan area. Therefore, the plan's operational groundborne vibration impacts would be less than significant.

Mitigation Measures

NOI-2 Conditions of Approval to Reduce Construction Vibration

The City of Santa Maria shall review future developments within 500 feet of a sensitive receptor, and where applicable, require construction contractors to implement the following feasible buffers for construction equipment as standard conditions of approval. Construction plans submitted to the City shall include construction vibration analysis and identify the following buffer distances during demolition, grading, and construction plans submitted to the City. The City of Santa Maria Building Division shall verify that grading, demolition, and/or construction plans submitted to the City include these notations prior to issuance of demolition, grading and/or building permits. Project specific environmental documents may adjust recommended noise reduction measures as necessary to respond to site specific conditions.

To reduce potential construction vibration impacts, the City of Santa Maria shall require the following:

- Prior to the issuance of a building permit for a project requiring pile driving during construction, the project applicant shall prepare a groundborne noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to the following construction activities: 1) within 135 feet of fragile structures such as historical resources; 2) within 100 feet of non-engineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of

engineered concrete and masonry (no plaster); 3) use of a vibratory roller within 40 feet of fragile historical resources or 25 feet of any other structure; or 4) use of a dozer or other large earthmoving equipment within 20 feet for a fragile historical structure or 15 feet of any other structure. The noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed the City's architectural damage thresholds (e.g., 0.12 in/sec PPV for fragile or historical resources, 0.2 in/sec PPV for non-engineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses such as drilling piles as opposed to pile driving, static rollers as opposed to vibratory rollers, and lower horsepower earthmoving equipment shall be used. If necessary, construction vibration monitoring shall be conducted to ensure the FTA's vibration thresholds are not exceeded.

Significance After Mitigation

Implementation of General Plan Policy N-4.1.1, and N-4.1.2 would reduce construction groundborne vibration impacts from development facilitated by the plan. Mitigation Measure NOI-2 provides more detail on how Goal N-4 and Policies N-4.1.1 and N-4.1.2 would be implemented to reduce construction groundborne vibration impacts in the project area by providing buffer screening distances for potential impacts and requiring a vibration analysis when vibration-intensive equipment are within those distances, which may include use of alternative equipment and/or vibration monitoring, as necessary. Together, implementation of this goal, policies, and Mitigation Measure NOI-2 would reduce this impact to a level of less than significant.

Threshold 3:	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Impact NOI-3 BUILDOUT OF THE 2045 GENERAL PLAN UPDATE COULD EXPOSE PEOPLE RESIDING OR WORKING IN THE PLAN AREA TO EXCESSIVE NOISE LEVELS FROM AIRPORT NOISE. IMPLEMENTATION OF POLICIES AND ACTIONS IN THE PLAN WOULD ENSURE THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

The nearest aircraft facility is the Santa Maria Airport, located in the southern portion of the city, shown in Figure 4.6-2. According to the most recent Santa Maria Airport Land Use Compatibility Plan (SMALUCP 2023) for Santa Barbara County, portions of the plan area are located within the airport noise contours for Santa Maria Airport. As noted in Section 4.6.1(d), the annual air show and military aircraft training use of the airport can expose the area to higher-than-typical noise. These events only occur during a small fraction of the year, and are therefore considered temporary. The plan does not anticipate changes to the frequency or other operational components of these temporary activities, and as such they are not considered potential airport noise impacts associated with the plan.

The 2045 General Plan Update includes the following policy and actions intended to minimize airport noise impacts:

Policy N-2.3: Airport noise mitigation. Require aviation easements and noise mitigation measures in new residential developments near the airport in the 60+ dB CNEL contour.

Action N-2.3.1: Encourage future Santa Maria Airport facility development or expansion to incorporate noise reduction measures to minimize stationary source noise impacts on surrounding areas where necessary.

Action N-2.3.2: Review and, as needed, revise land use designations to ensure consistency with the ALUCP noise contour maps.

Implementation of this policy and associated actions would ensure that noise from new developments facilitated by the plan are analyzed and mitigated to acceptable levels prior to approval of these projects. Therefore, the plan would not expose people residing or working in the project area to excessive noise levels, and this impact would be less than significant.

Mitigation Measures

No mitigation is required because this impact would be less than significant.

4.6.4 Cumulative Impacts

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, *Environmental Setting,* Subsection 3.3, *Cumulative Development*.

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Future development within the cumulative impact analysis area would increase noise and vibration levels and may result in a significant impact.

As discussed in Impact NOI-1, construction noise generated by future development facilitated by the plan, in combination with construction activities for other cumulative projects that may be constructed simultaneously could, without mitigation, substantially increase noise levels in the vicinity of future projects. Goals, policies and mitigation measures have been identified to help reduce noise from construction equipment from new development facilitated by the plan. Therefore, unless construction of cumulative projects, including new development facilitated by the plan, occur in close proximity to each other and simultaneously, noise from individual construction projects has a small chance of combining to create significant cumulative impacts. Although this scenario is unlikely, and policies, actions, and mitigation measures would be implemented to the extent feasible, the potential remains for a cumulatively considerable increase in construction noise from future development facilitated by the plan. The plan could result in a substantial contribution to this cumulatively significant impact. Therefore, the cumulative impact related to construction noise would be significant and unavoidable.

Future development facilitated by the plan would introduce new stationary noise sources to the ambient noise environment in and around the plan area, including new mechanical ventilation equipment. These sources may combine with noise from other nearby cumulative projects to result in higher noise levels. However, operational noise from these sources is localized and rapidly attenuates within an urbanized setting due to the effects of intervening structures and topography that block the line of sight, and due to other noise sources closer to receptors that obscure project-related noise. Implementation of the Santa Maria Municipal Code noise standards would ensure that noise from new stationary sources as part of cumulative development would be within

acceptable levels. Therefore, the cumulative impact related to operational stationary noise would be less than significant.

Traffic noise increases from development facilitated by the plan would contribute to noise level increases that exceed impact criteria and would be cumulatively considerable. Implementation of policies and actions in the 2045 General Plan Update would reduce the contribution of the plan to roadway traffic noise impacts. However, there is no feasible mitigation that would ensure that all future development facilitated by the plan could feasibly reduce traffic noise to avoid impacts. Therefore, in combination with traffic noise for other cumulative projects, the cumulative impact related to operational traffic noise would be significant and unavoidable.

Although there could be other cumulative projects simultaneously under construction near a development facilitated by the plan, the potential for construction groundborne vibration and noise impacts exists within a limited area (e.g., within approximately 25 feet for a vibratory roller). Since no two construction cumulative projects, including new development facilitated by the plan, would both be within 25 feet of a given sensitive structure, cumulative groundborne vibration and noise impacts would be less than significant.

Future development facilitated by the plan would expose people residing or working in the plan area to airport noise. Airport noise is localized to locations affected by airport operations and overflights (refer to Figure 4.6-2), and does not combine with noise from other nearby cumulative projects to result in higher airport noise levels. Implementation of Policy N-2.3 and Actions N-2.3.1 and N-2.3.2 would ensure that noise from new developments facilitated by the plan are analyzed and mitigated to acceptable levels prior to approval of these projects. Therefore, the cumulative impact related to operational stationary noise would be less than significant.

4.7 Transportation and Traffic

This section evaluates the 2045 General Plan Update's potential impact on the local and regional transportation system in Santa Maria, including potential impacts to vehicle miles traveled (VMT). The regulatory setting in this section is based on the City's General Plan Environmental Existing Conditions Report (City of Santa Maria 2020) and the current 2011 General Plan Circulation Element. The analysis in this section is based, in part, on the updated Circulation Element that is a component of the 2045 General Plan Update, on the basis that the updated Circulation Element will update setting information in the 2011 General Plan Circulation Element. The analysis in this section is also based, in part, on the City of Santa Maria travel demand model, evaluated by GHD in June 2025.

4.7.1 Setting

The City of Santa Maria is served by an extensive network of freeways, arterials, collectors, and local roads. The network provides a high level of north-south/east-west connectivity with adjacent counties (i.e., San Luis Obispo, Ventura, and Kern Counties) by way of United States Highway 101 (U.S. 101), State Route 135 (SR 135) and State Route 166 (SR 166) that traverse the city. SR 135 and SR 166 both junction State Route 1 (SR 1) to the west of the city.

a. Roadway Network and Functional Classifications

Santa Maria is served by a system of streets and paths that enable connections in the city and to the regional transportation system. They are classified by their function with different characteristics and accommodations for modes of travel and access to adjacent land uses. The system supports multiple modes of travel and contains network elements that support vehicular, bicycle, pedestrian, and transit travel. In addition, roadways in Santa Maria provide routes for truck hailing and industrial uses hauling. The roadway classifications serve as the City's policy guidance for the development of multi-modal streets and balance all network elements. Descriptions of roadway classifications and their characteristics in Santa Maria are described below. The location of existing roadways and their classifications are shown in Figure 4.7-1.

b. State Highways

U.S. 101 and State highways, city streets and county roads carry a large amount of traffic throughout Santa Barbara County. Given that the State highway network forms the primary backbone of the Santa Barbara County network, the State highway system within Santa Barbara County is described in further detail below.

State Route 1

SR 1 serves as a major north-south corridor traversing along most of the Pacific coastline of California. The route begins in Dana Point (I-5 Junction) and ends in Leggett (Junction 101). SR 1 is the longest route in California at approximately 655 miles.

Within Santa Barbara County, SR 1 is functionally a Principal/Minor Arterial facility. The route begins at the Cañada De Las Cruces at Junction U.S. 101 traversing north through the City of Guadalupe into San Luis Obispo County. SR 1 traverses to the west of the city of Santa Maria. The route encompasses approximately 51 miles.

SR 1 contains a combination of two to four lane conventional highway and two to four lane expressway sections. A two lane highway/expressway is one lane in each direction and a four lane highway/expressway is two lanes in each direction. This route serves as the major access arterial for surrounding communities i.e., Santa Maria, Guadalupe, Orcutt and Lompoc.

U.S. Highway 101

U.S. 101 serves as a major north-south coastal route extending from Los Angeles, California north through Oregon State ending in Tumwater, Washington. U.S. 101 is approximately 1,540 miles.

Within Santa Barbara County, U.S. 101 begins along the southern coast of Santa Barbara at the Santa Barbara/Ventura County line traversing north to the City of Santa Maria at the Santa Maria Way Interchange to SR 166 East Interchange. The route encompasses approximately 91 miles.

U.S. 101 contains a combination of four-six lane freeway/expressway lane sections. This route serves as the major access freeway/expressway for surrounding communities i.e., Carpinteria, Santa Barbara, Goleta, Solvang, Buellton, Orcutt, and Santa Maria.

State Route 135 (Broadway)

SR 135 serves as a western north-south bypass corridor of U.S. 101 in northern Santa Barbara County. The route begins in Los Alamos (Junction US 101) passing north through Santa Barbara County to the SR 1 junction. At the SR 1 junction SR 135 heads east through the Orcutt community and further north to the City of Santa Maria, where it is known as Broadway. Broadway continues north through the city to the U.S. 101 interchange.

Broadway is functionally a Minor Collector/Principal Arterial facility. Approximately the first 9.6 miles is a 2-lane conventional highway, the next 7.1 miles is a 4-lane freeway/expressway and the remainder of its length is a four and six-lane conventional highway. This route serves as the major access arterial for surrounding communities i.e., Santa Maria, Orcutt and Los Alamos, and encompasses approximately 21 miles.

State Route 166

SR 166 serves as an east-west corridor connecting the Central Coast to the southern San Joaquin Valley. The west end route begins at SR 1 in Guadalupe, traversing approximately 11 miles east and ending at the U.S. 101 interchange within the city. The portion of SR 166 within the City boundaries is referred to as Main Street and is designated as a two to four-lane Primary Arterial.

East of the U.S. 101, SR 166 begins just north of Santa Maria at Junction 101 (San Luis Obispo County) traversing eastward along the San Luis Obispo/Santa Barbara County line into Kern County ending at SR 99 Junction near Mettler. This portion of the route is approximately 100 miles. SR 166 contains a combination of two-lane Principal and Minor Arterial to four-six lane Principal Arterial Conventional Highway.

Betteravia Road

Betteravia Road from U.S. 101 to Broadway (SR 135) is on the National Highway System. Even though this segment of Betteravia Road is still under the city's jurisdiction, the National Highway System designation helps to prioritize available federal funding for this segment of Betteravia Road.

c. Arterials, Collectors, and Local Roadways

The City of Santa Maria's circulation system is composed of a wide range of transportation facilities that serve two basic functions, mobility and land access. Arterials serve major activity centers, as well as neighboring areas, and the highest traffic volume corridors to provide a network of continuous routes and facilitate both local and inter-regional travel. Collectors provide local access to the overall roadway network, channeling traffic from local roadways into the arterial network. Local roads provide direct access to neighboring land and primarily facilitate local travel.

Table 4.7-1 identifies the roadway classification facility types in the current Circulation Element.

Table 4.7-1 Current Circulation Element Roadway Classification

Facility Type	Emphasis (Mobility versus Land Access)
Freeway	Reserved for limited access, uncontrolled, grade separated facilities, this classification includes US 101. The Freeway provides a high degree of mobility with no direct land access.
Primary Arterial	Provide mobility with intermittent access to Secondary Arterials with minimal direct land access.
Secondary Arterial	Provide mobility via access to Collector Roads and some Local Streets and accommodate access to major traffic generating land uses.
Collector Road	Connect Local Streets with Secondary Arterials and, occasionally, Primary Arterials, and also provide access to major land uses.
Local Streets	Provide access to adjacent land uses as well as access to Collector Roads.
Minor Streets	Provide access to adjacent land uses as well as to Local Streets and, occasionally, Collector Roads. Minor Streets occur only within and serve only residentially-zoned properties.
Roundabouts	Circular intersections that feature, among other important geometric components, a central island, a circulatory roadway, and splitter islands on each approach. Key to the proper implementation of these facilities is the understanding that roundabouts rely upon two basic and important principles: 1) Speed reduction through the facility, achieved through geometric design, which assures optimal operational benefits and safety enhancement; and, 2) The yield-at-entry rule, which requires traffic entering the intersection to yield to traffic that is traveling in the circulatory roadway when conflicts occur between them.

Source: Santa Maria General Plan Circulation Element, 2011

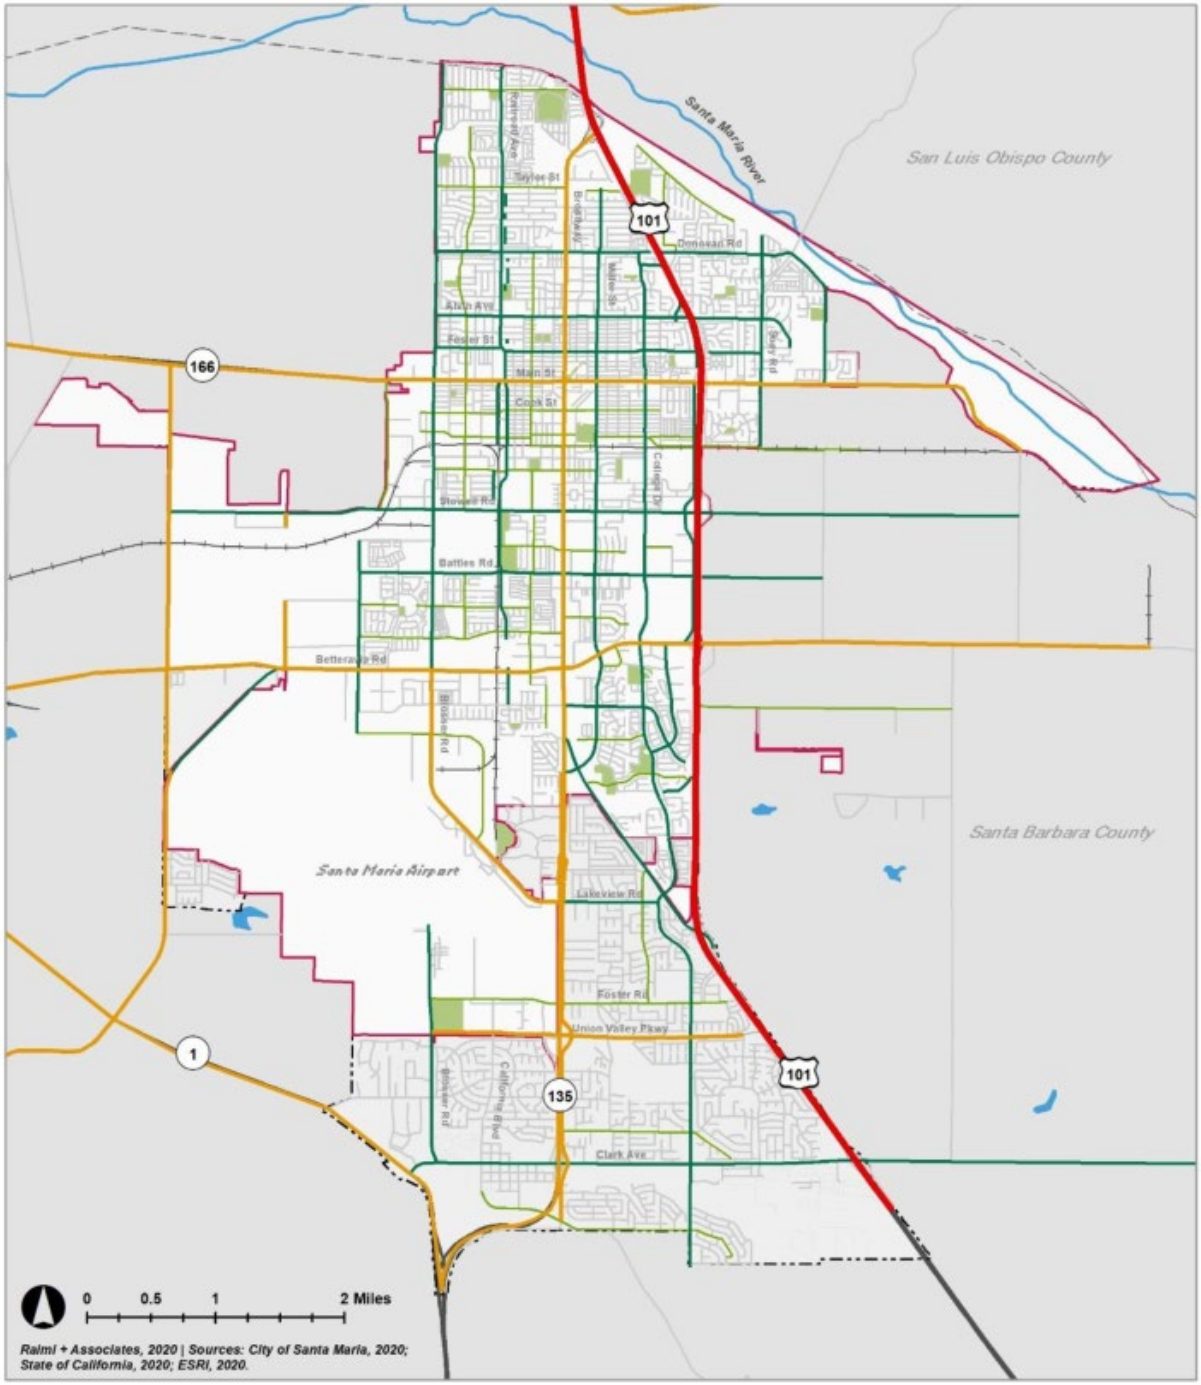
A map of major roadways by functional classification from the current Circulation Element is provided in Figure 4.7-1.

d. Pedestrian and Bicycle Network

Active Transportation Plan

The 2020 Santa Maria Active Transportation Plan was adopted by the City Council in January 2021. The Active Transportation Plan is a planning effort led by the City of Santa Maria to facilitate the design and implementation of a connected bicycle and pedestrian network to provide safe, affordable, and accessible transportation alternatives to the community.

Figure 4.7-1 Current Circulation Element Roadway Functional Classification



Existing and Planned Bikeways

In the current Circulation Element, existing and planned bicycle facilities are categorized based on the four classifications recognized by Caltrans, along with three subclassifications. These include:

- Class I Shared Use Paths. Class I shared use paths are completely separated rights-of-way designated for the exclusive use of bicycles and pedestrians, with crossflows by motorists minimized. Caltrans standards require a minimum width of eight feet for a one-way Class I bike path.
- Class II Bicycle Lanes. Class II bicycle lanes provide a striped or buffered right-of-way designated for the exclusive or semi-exclusive use of bicycles with through-travel by motor vehicles or pedestrians prohibited, but with vehicle parking and crossflows by pedestrians and motorists. Caltrans standards generally require a minimum width of four feet for a Class II bicycle lane.
- Class III Bicycle Routes. Class III bicycle routes are signed routes for bicyclists on low-speed, low-volume streets where lanes are shared with drivers. Caltrans standards for Class III bicycle routes are incorporated into roadway width requirements.
- Class IV Separated Bikeways. Class IV separated bikeways are on-street bicycle facilities with a physical barrier between the bicycle space and motor vehicle lanes, including bollards, curbs, or parking. Caltrans standards require a minimum width of five feet for a one-way Class IV separated bikeway.

Bicycle-Transit Connections

The transit services of Santa Maria Regional Transit, The Breeze Bus, Clean Air Express, Guadalupe Flyer, and RTA-Route 10 all have buses that are equipped with bike racks capable of accommodating bicycles. This service enables riders to access destinations that are difficult to reach solely by bicycle, while it also expands the potential service area range of bus stops. Bicycle parking is not provided at most stops along these transit services, with the exception of the Santa Maria Transit Center. There are no reported bike lockers available for public use along the stops or at the Santa Maria Transit Center, but there are six reported bike lockers located at the Santa Maria Public Library.

Pedestrian Network

The Santa Maria Active Transportation Plan states that most trips begin and end as walking trips even when a car, bicycle, bus, or train is involved. Like the City of Santa Maria's existing bikeway network, the city's pedestrian conditions vary widely. Some locations have a comprehensive sidewalk network with crossings and signage, while infrastructure is limited in other locations.

e. Transit

This section describes the existing transit services in Santa Maria and regional services provided in Santa Barbara County and southern San Luis Obispo County. In addition, the City is currently updating its Short Range Transit Plan. This document focuses on service recommendations in four categories: performance improvement, service enhancement, policy, and innovation/technology.

The five transit service providers currently available to the residents of Santa Maria include:

- **Santa Maria Regional Transit (SMRT)**. The City of Santa Maria operates SMRT's local fixed route, regional bus service, and on-demand Microtransit and ADA paratransit bus services. SMRT ridership demographics reflect a broad cross-section of the service area, including seniors, persons with disabilities, K-12 students, college students, working professionals, tourists and

riders who choose to use transit instead of driving. Transit ridership is rapidly growing and is expected to continue to grow over the years to come. The routes currently provide public transportation to local employment centers including schools, health care facilities, and major attractors (shopping centers, educational government facilities, medical and other uses). These trips are matched with services that extend to neighborhoods within the city (City of Santa Maria 2025).

- **The Breeze Bus.** The Breeze Bus is a commuter service between Santa Maria, Vandenberg Air Force Base, Lompoc, Los Alamos, Buellton, and Solvang that operates Monday through Friday. This objective of this transit service is to accommodate working commuters with three trips daily.
- **The Guadalupe Flyer.** The Guadalupe Flyer is a single route, connecting destinations around Guadalupe with the Town Center Mall and Transit Center in Santa Maria, traveling approximately 12 miles from Guadalupe on SR 166.
- **Clean Air Express.** The Clean Air Express commuter bus service is a weekday commuter bus program serving residents of Lompoc, Santa Maria, Buellton, Solvang, and adjacent unincorporated areas commuting to their jobs in Goleta and Santa Barbara. The Clean Air Express is managed by SBCAG.
- **SMOOTH.** SMOOTH maintains and operates various contracts with local groups in Santa Barbara County to provide transportation assistance with emphasis for passengers requiring medical, physical, and social assistance. SMOOTH provides Senior Dial-A-Ride services in Santa Maria.
- **San Luis Obispo Regional Transit Authority**. San Luis Obispo Regional Transit Authority (SLORTA) offers local and regional bus service to the South County portion of San Luis Obispo County and northern Santa Barbara County, including Santa Maria. Specifically, SLORTA links the Five Cities area (Arroyo Grande, Grover Beach, Oceano, Pismo Beach and Shell Beach), as well as Nipomo and Avila Beach.

4.7.2 Regulatory Setting

a. Federal Regulations

United States Department of Transportation

The United States Department of Transportation provides a number of grant programs, primarily for the construction and upgrading of major highways and transit facilities. Many of these grants are administered by the State and regional governments. Use of federal grant funding also invokes the National Environmental Protection Act in some cases.

b. State Regulations

Caltrans Authority over the State Highway System

Caltrans is responsible for the planning, design, construction and maintenance of all interstate freeways and state routes. It builds, maintains, and operates the State Highway System in California with a goal to facilitate the safe and efficient use of the state transportation system for all users. Standards established in Caltrans' 2020 Transportation Impact Study Guide focus on the VMT metric. The 2020 Transportation Impact Study Guide acts as a replacement for the 2002 Guide for the Preparation of Traffic Impact Studies but is only intended to be used with local land use projects and plans, not to be used for transportation projects on the State Highway System.

AB 32 and SB 375

With the passage of the Global Warming Solutions Act of 2006 (AB 32), the State committed itself to reducing statewide GHG emissions to 1990 levels by 2020. To meet the emission reduction goals of AB 32, the California's Sustainable Communities and Climate Protection Act, or SB 375, was enacted to direct the State's metropolitan planning organizations (MPOs) to develop a Sustainable Communities Strategy (SCS) that demonstrates how the region will meet its emission reduction targets. The MPO for the Santa Barbara County region, including Santa Maria, is the Santa Barbara County Association of Governments (SBCAG).

As a companion document to the Regional Transportation Plan (RTP), the SCS must include action items and financing decisions to achieve the GHG reduction target established by CARB. If the SCS does not meet the regional target, the MPO must produce an Alternative Planning Strategy that details an alternative plan to meet the target. SB 375 requires a greater level of land use planning coordination between local agencies (i.e., City of Santa Maria, Santa Barbara County) and MPOs (i.e., SBCAG) to meet the GHG targets established for Santa Barbara County.

SB 743

SB 743, signed into law in 2013, directed OPR to develop revisions to the *CEQA Guidelines* by July 1, 2014 to establish new criteria for determining the significance of transportation impacts and define alternative metrics instead of traffic level of service. SB 743 requires the new criteria to "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." It also states that alternative measures of transportation impacts may include "vehicle miles traveled, vehicle miles traveled per capita, automobile trip generation rates, or automobile trips generated." SB 743 changes the way that public agencies evaluate the transportation impacts of projects under CEQA by recognizing that roadway congestion, while an inconvenience to drivers, is not itself an environmental impact (Public Resource Code [PRC] Section 21099, subdivision [b][2]).

c. Local Regulations

Santa Barbara County Association of Governments Connected 2050 Regional Transportation Plan and Sustainable Communities Strategy

SBCAG is required by State and federal law to prepare, update, and adopt a RTP every four years. The most recent update to the RTP was completed by SBCAG in 2021 (Connected 2050 RTP/SCS) and sets forth the long-range transportation planning goal describing how the region will meet its transportation needs for the 30-year period from 2020 to 2050. The Connected 2050 RTP/SCS provides a collective vision for the region's future that balances transportation and housing needs with social, economic, and environmental goals. The Connected 2050 RTP/SCS helps guide future planning efforts and policy decisions that affect transportation, including its relationship with housing and land use, with the goal to reduce regional greenhouse gas emissions. The Connected 2050 RTP/SCS is based, in part, on SBCAG's Regional Growth Forecast which projects population and employment data to 2050. SBCAG designates Regional Housing Needs Allocation to jurisdictions based on the Regional Growth Forecast.

The Connected 2050 RTP/SCS includes five goal areas – Environment, Mobility & System Reliability, Equity, Health & Safety, and Prosperous Economy – with respective policies to meet each goal areas, which are expected to result in significant benefits to the region, not only with respect to transportation and mobility, but also economic activity, safety, and social equity (SBCAG 2025).

Santa Maria Active Transportation Plan

The Santa Maria Active Transportation Plan was adopted by the City Council in January 2021. The Active Transportation Plan updates the 2009 Bikeway Master Plan and serves as a guidance document intended to support the provision of a connected bicycle and pedestrian network to provide safe, affordable, and accessible transportation choices in Santa Maria. Consistent with the 2017 Regional Transportation Planning Guidelines, this Active Transportation Plan emphasizes the need for both active transportation infrastructure planning and non-infrastructure program strategies to help meet the City's goals for transportation mobility and accessibility. Active transportation improvements contribute to parallel state and federal goals related to air quality compliance and climate change initiatives, including compliance with the California Complete Streets Act (AB 1358) and the Americans with Disabilities Act, as well as environmental justice and social equity initiatives to provide healthier mobility choices to disadvantaged communities.

Santa Maria Airport Land Use Compatibility Plan

Adopted in January of 2023, the Airport Land Use Compatibility Plan for the Santa Maria Airport is provided by SBCAG's Airport Land Use Commission. The Airport Land Use Commission reviews land use plans and development proposals within Airport Influence Areas. Specifically, the Plan seeks to protect the public from the adverse effects of aircraft noise, to ensure that people and facilities are not concentrated in areas susceptible to aircraft accidents, and to ensure that no structures or activities encroach upon or adversely affect the use of navigable airspace. These plans also provide land use compatibility policies and criteria applicable to local jurisdictions in their preparation or amendments of General Plans.

Santa Maria Regional (formerly Area) Transit Short Range Transit Plan Update

In 2018, the City of Santa Maria hired a consultant to update to its Short Range Transit Plan. This plan is the guiding document for the City's public transit program. Before this update, the most recent full update was completed in 2008, with a subsequent update in 2015 that focused on Santa Maria Regional Transit's (SMRT's) evening service and fare policy. In 2021 the City prepared an Addendum to the Short Range Transit Plan incorporating post-COVID route and schedule revisions. The current Short Range Transit Plan includes a series of service recommendations in four categories: performance improvement, service enhancement, policy, and innovation/technology.

Santa Maria Downtown Multimodal Streetscape Plan

The Downtown Multimodal Streetscape Plan was adopted in January 2019 to guide the transformation of Santa Maria's Downtown streets into vibrant, multimodal corridors. Funded through a Caltrans Sustainable Communities Grant, the plan builds on the City's Downtown Specific Plan and Caltrans' Main Street, California program to promote Complete Streets principles. The plan provides conceptual design guidance for Broadway and Main Street, aiming to improve safety, walkability, and livability while accommodating all users—pedestrians, bicyclists, transit riders, and vehicles. Key goals include reducing lane widths, adding bike facilities, widening sidewalks, and enhancing intersections with traffic calming and landscaping. The plan emphasizes community engagement and reflects input from extensive public outreach, prioritizing beautification, connectivity, and economic revitalization. While the plan does not constitute final design approval, it establishes a framework for future engineering and implementation phases in partnership with Caltrans and identifies potential funding strategies for phased improvements.

4.7.3 Impact Analysis

a. Methodology and Significance Thresholds

Methodology

VMT measures the amount of travel for all vehicles in a geographic region over a given period of time, typically a one-year period. VMT is calculated by adding up all the miles driven by all the cars and trucks on all the roadways in a region.

The analysis in this section is based, in part, on the City of Santa Maria travel demand model, which maintains a local traffic model for future traffic conditions for all major roadways in the city and along the Santa Maria Valley. The model consists of a base-year scenario (existing/baseline conditions) using the most recent data available, and a 2045 future year scenario (future conditions). The City of Santa Maria travel demand model is a trip-based model and identifies the following estimates:

- Residential VMT per household was estimated based on the VMT attributable to home-based trip productions, to and from residences in Santa Maria and the annexation area.
- VMT per employee was estimated based on the VMT associated with home-based work trips, to and from places of employment in Santa Maria and the annexation area.

Significance Thresholds

CEQA Guidelines Appendix G provides the following significance thresholds to determine if a project would have a potentially significant impact on transportation. For the purposes of this EIR, implementation of the 2045 General Plan Update may have a significant adverse impact if it would:

1. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities;
2. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b);
3. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment); or
4. Result in inadequate emergency access.

The methodology for assessing impacts under thresholds 1, 3 and 4 is qualitative in nature and considers the existing regulations in place that would minimize potential impacts related to transit, roadway, bicycle and pedestrian facilities; geometric design features; and emergency access.

The analysis of whether the project would conflict or be inconsistent with CEQA Guidelines Section 15064.3(b) describes specific considerations for analyzing transportation impacts pursuant to SB 375. CEQA Guidelines Section 15064.3(b) states that VMT is “generally” the most appropriate measure of transportation impacts. No particular methodology or metric is mandated by Section 15064.3(b). Instead, the choice of methodology and metric is left to the discretion of the lead agency, bearing in mind the criteria the legislature had in mind for determining the significance of transportation impacts in SB 743. These were expressed in PRC Section 21099(b)(1), which states: “[t]hose criteria shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses.”

The assessment of VMT impacts for this EIR was determined by utilizing the City of Santa Maria travel demand model to forecast the typical daily weekday rates of VMT per household attributable

to the residential population of Santa Maria, and VMT per employee attributable to jobs in Santa Maria.

SB 375 requires CARB to develop and set regional targets for greenhouse gas emission reductions from passenger vehicles. These targets are based on detailed calculations of the reduction in greenhouse gas emissions needed from various sectors of the economy in order to achieve the State's overall greenhouse gas reduction goals. In accordance with CEQA Guidelines Section 15064.7(c), Thresholds of Significance, the City of Santa Maria has elected to adopt the VMT reduction target set by CARB for the SBCAG region as the threshold of significance for VMT impact determination. Using this threshold, VMT impacts would be considered potentially significant if the forecasted rate of residential VMT per household or VMT per employee for the project were to exceed 83 percent of the existing rate of VMT in each category (i.e., at least a 17% reduction in per-unit VMT would be required for an impact to be considered less than significant).

Table 4.7-2 summarizes the existing weekday daily rates of VMT and corresponding significance thresholds. The existing daily rate of residential VMT per household is estimated to be 52.2 miles and the existing daily rate of VMT per employee is estimated to be 11.1 miles per employee. VMT impacts resulting from the plan would therefore be considered significant if the forecasted year 2045 rate of residential VMT per capita under the proposed General Plan were to exceed 43.3 miles, or if the forecasted year 2045 rate of VMT per employee were to exceed 9.2 miles.

Table 4.7-2 VMT Impact Thresholds

Scenario	Residential VMT per Household	VMT per Employee
Existing Condition	52.2	11.1
Significant Impact Threshold (83 percent of Existing rate)	**43.3**	**9.2**

Source: Santa Maria Travel Demand Model, GHD, June 2025

b. Project Impacts and Mitigation Measures

Threshold:	Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Impact TRA-1 THE 2045 GENERAL PLAN UPDATE WOULD NOT CONFLICT WITH THE CONNECTED 2050 RTP/SCS, THE SANT MARIA ACTIVE TRANSPORTATION PLAN, OR ANY OTHER APPLICABLE PROGRAM, PLAN, ORDINANCE, OR POLICY RELEVANT TO THE TRANSPORTATION SYSTEM. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

The 2045 General Plan Update would result in additional residential and commercial density, which would increase multimodal trips (vehicle, bicycle, pedestrian, and transit) onto the circulation network. This increase in multiple modes of travel would be in conformance with the goals and policies contained in the following plans affecting the City's circulation network:

- SBCAG Connected 2050 RTP/SCS
- Local Roadway Safety Plan
- Active Transportation Plan

A brief discussion of the 2045 General Plan's consistency with SBCAG's Connected 2050 RTP/SCS, the City's Local Roadway Safety Plan, and the City's Active Transportation Plan is provided below.

Connected 2050 RTP/SCS

The 2045 General Plan Update includes policies in the Circulation Element that facilitate development to promote regional transportation goals included in the Connected 2050 RTP/SCS to balance transportation and housing needs with social, economic, and environmental goals. These policies include:

Policy CIR-1.1: Complete Street planning and design. Ensure that complete streets infrastructure improves transportation choices for pedestrians, bicyclists, motorists, and public transportation riders ~~and that users~~ of all ages and abilities. ~~are considered and included in the planning, design, approval, construction, and operation of new streets, and the alteration and maintenance phases of existing streets.~~

Policy CIR-1.2: Complete Streets construction. Construct City streets and ~~require new~~ private streets to be constructed and maintained to the extent feasible in accordance with the Street Network, Bikeway Network, and Pedestrian Priority Improvement Network diagrams, the Active Transportation Plan, and standards established by the City Engineer that should be consistent with accepted standards such as the National Association of City Transportation Officials (NACTO) street design guidelines.

Policy CIR-1.3: Complete Streets in new development. Condition approvals of new development with street improvements and access provisions, to the extent feasible, that would be necessary to maintain multimodal operating standards and require complete street amenities consistent with the General Plan and accepted standards for new public and private streets.

Action CIR-1.3.1: Update the Santa Maria Municipal Code to establish active transportation infrastructure standards for new development, such as minimum requirements for bicycle storage/lockers and requiring integration with existing nearby bicycle, pedestrian, and transit infrastructure.

Policy CIR-2.2: Transportation planning. Update and implement transportation plans to be consistent with the General Plan.

Action CIR-2.2.1: Continue to participate in circulation and transportation planning with Santa Barbara County, Santa Barbara County Association of Governments (SBCAG), and the State of California.

Action CIR-2.2.2: Seek inclusion in federal, state, and regional transportation improvement plans that support local capital improvements. These include the Federal Transportation Improvement Plan (TIP), the State Transportation Improvement Plan (STIP), the Santa Barbara County Regional Transportation Improvement Program (RTIP), and the County Regional Transportation Program (RTP).

Policy CIR-6.1: Public transit service and financial stability. Maintain and enhance convenient, safe, and reliable transit services..

Action CIR-6.1.1: Maintain the current level of bus services and expand such services as required when demand levels increase, covering new developments and underserved areas. This may include implementing flexible transit service (also known as microtransit) for off-peak hours, or providing night and weekend services where feasible.

Action CIR-6.1.3: Ensure transit services are affordable and accessible for people of every age, ability, or income. Serve disadvantaged communities, transit-dependent individuals, and major employment centers, ensuring that all stops and stations are ADA compliant.

Action CIR-6.1.5: Collaborate with regional transit agencies on coordinated scheduling to ensure seamless transfers, facilitating inter-city travel and access to regional employment centers and attractions.

Action CIR-6.1.6: Identify and secure stable funding sources for transit operations, maintenance, and capital projects. Explore federal, state, regional, and local funding opportunities, including potential value capture mechanisms from Transit-Oriented Development.

Policy CIR-6.4: Transit-supportive land use and urban design. Promote Transit Oriented Development (TOD) by encouraging and incentivizing mixed-use, compact developments around existing and planned transit stops and corridors.

Action CIR-6.4.1: Adopt accessible citywide street design standards that support transit operations and active transportation. Plan new developments with direct pedestrian and bike connections to transit stops and ensure building frontages are accessible to transit users.

Action CIR-6.4.2: Integrate transit planning and City planning efforts, including land use, housing, economic development, and environmental plans for a holistic approach to development. Require new development and redevelopment sites to provide transit stops consistent with Santa Maria Regional Transit Standards and documents.

Action CIR-6.4.3: Action CIR-6.4.3: Adopt comprehensive transit design guidelines that provide clear direction for planners and developers on designing new developments and redevelopments that integrate transit. These guidelines should:

- Prioritize pedestrian and bicycle connections to transit stops, for safe, direct, and comfortable routes.
- Promote building orientation and entrances that face the street and transit stops, rather than being set back behind parking.
- Incentivize mixed-use development that places residential, commercial, and civic uses within easy walking distance of transit.
- Incorporate streetscape elements that enhance the pedestrian experience and encourage transit use, such as wide sidewalks, street trees, inviting public spaces, and appropriate lighting.
- Provide guidance on integrating transit stops directly into development sites for maximum convenience and visibility.
- Encourage human-scaled architecture and design that contributes to a vibrant and active public realm around transit facilities.

Policy CIR-7.1: Reduce VMT. Reduce VMT in accordance with the reduction target set by the California Air Resources Board (CARB) for the Santa Barbara County Association of Governments (SBCAG) region ~~below regional averages on~~ a "per resident" and "per employee" basis. ~~and disperse peak hour traffic to better utilize the existing and planned transportation infrastructure.~~

Action CIR-7.1.1: Maintain VMT thresholds consistent with State guidelines for use in evaluating potential traffic impacts from projects subject to CEQA.

Policy CIR-7.2: Prioritize land use development patterns that reduce VMT. In existing and future planned areas of the city, prioritize infill and mixed-use development and encourage new development in close proximity to existing employment, housing, schools, commercial centers, and other services and amenities.

With implementation of the policies included in the Circulation Element, the plan would encourage alternative travel, equitable access, and a reduction in vehicle trips, consistent with the regional transportation goals of the Connected 2050 RTP/SCS.

Santa Maria Active Transportation Plan

The Active Transportation Plan serves as a guidance document intended to support the provision of a connected bicycle and pedestrian network to provide safe, affordable, and accessible transportation choices in Santa Maria. The following 2045 General Plan Circulation Element policies would support active transportation projects identified in the Active Transportation Plan:

Policy CIR-1.4: Bicycle and pedestrian facilities. Consistent with the Bikeway Network and Pedestrian Priority Improvement Network diagrams, develop bicycle and pedestrian facilities to meet the transportation and recreational needs of the residents throughout the city, and where possible, provide separate bikeway access to major destinations (e.g., schools, parks, and commercial and employment centers) to ensure safety.

Action CIR-1.4.1: Implement the bicycle and pedestrian projects identified in the Pedestrian Priority Improvement Network diagram and the Santa Maria Active Transportation Plan.

Action CIR-1.4.2: Pursue all applicable revenue sources for the implementation of bicycle and pedestrian facilities.

Policy CIR-1.5: Bicycle and pedestrian facilities in new development. Require pedestrian- and bicycle-friendly facilities consistent with the Bikeway Network and Pedestrian Priority Improvement Network diagrams and the Active Transportation Plan when reviewing and approving private development applications, General Plan or zoning changes, and specific plans.

Policy CIR-1.6: Multimodal street standards. Maintain and update street standards that serve not just automobile operations, but also multimodal movement and adjacent land uses, including pedestrians, motorists, bicyclists, and transit riders of all ages and abilities, in a form that is compatible with and complementary to adjacent land uses, and promotes connectivity between uses and areas.

Policy CIR-5.1: Vision Zero. Advance efforts to eliminate traffic fatalities and serious injuries attributable to collisions on City streets by developing and implementing a "Vision Zero" strategy to reduce traffic fatalities and serious injuries to zero while increasing safe, healthy, and equitable mobility for all.

Action CIR-5.1.1: Monitor collision data and implement countermeasures to address identified collision patterns.

Action CIR-5.1.2: Implement safety improvements, including improvements consistent with those recommended by the Santa Maria Local Roadway Safety Plan (LRSP).

Policy CIR-5.2: Safe Routes to School. Promote pedestrian safety and connectivity between homes and schools by implementing infrastructure improvements (e.g., sidewalks, crosswalks, traffic calming measures, and bike lanes) to ensure safe, accessible pathways for students.

Policy CIR-6.3: Integrated multimodal infrastructure. Develop a multimodal transit system that works for walking, biking, and shared mobility.

The 2045 General Plan Update would ensure adequate bicycle and pedestrian facilities are provided to promote safe multimodal circulation, and plan policies would be further supported by active transportation projects in the Active Transportation Plan. Therefore, the 2045 General Plan Update would not conflict with the Active Transportation Plan.

Mitigation Measures

No mitigation is required because this impact would be less than significant.

Threshold:	Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Impact TRA-2 THE FUTURE (2045) CITYWIDE RATES OF VMT WITH THE 2045 GENERAL PLAN UPDATE WOULD NOT MEET THE 17% VMT REDUCTION TARGET REQUIRED TO BE CONSISTENT WITH CEQA GUIDELINES 15064.3(B). THERE ARE NO FEASIBLE GENERAL PLAN POLICIES OR MITIGATION MEASURES THAT COULD REDUCE CITYWIDE RATES OF VMT BELOW THE VMT REDUCTION TARGET. AS A RESULT, THIS WOULD BE A SIGNIFICANT AND UNAVOIDABLE IMPACT.

As described in Section 4.7.3(a), Methodology and Significance Thresholds, VMT impacts from the 2045 General Plan Update were analyzed using the City of Santa Maria travel demand model. VMT impacts would be considered significant if the forecasted rate of residential VMT per household of the project exceeded 43.3 miles or the VMT rate per employee for the project exceeded 9.2 miles. As shown in Table 4.7-3, the model-forecasted rates of residential VMT per household and VMT per employee for Future (Year 2045) conditions both exceed the significance threshold. Therefore, transportation impacts associated with VMT would be significant.

Table 4.7-3 Per Household and Per Employee Vehicle Miles Traveled

Scenario	VMT per Household	VMT per Employee
Existing/Baseline Conditions	52.2	11.1
Future (2045) Conditions	47.6	9.8
Significance Threshold	43.3	9.2
Impact Finding	Significant	Significant

Source: Santa Maria Travel Demand Model, GHD, June 2025

Although the overall average per-unit VMT in the horizon year does not meet the 17% VMT reduction target, it should be noted that the overall average per-unit VMT figure includes a mix of existing and future residential and non-residential developments. Table 4.7-4 shows the per-unit VMT of future development only as a separate calculation (i.e., what could be approved and built going forward under the 2045 General Plan Update.

Table 4.7-4 Vehicle Miles Traveled, Reduction from Existing

Scenario	VMT per Household	VMT per Employee
Existing/Baseline Conditions	52.2	11.1
Future (2045) Conditions	47.6	9.8
Reduction from Existing	-8.8%	-11.7%
Future Development Only	39.5	7.4
Reduction from Existing	-24.2%	-32.8%

Source: Santa Maria Travel Demand Model, GHD, June 2025

As shown in Table 4.7-4, evaluating future development alone (excluding existing development from the calculation) would meet CARB's VMT reduction target.

The 2045 General Plan Update includes policies in the Circulation Element that would shorten trips and increase the use of multi-modal transportation and thereby reduce per-unit VMT. These include:

> **Policy CIR-7.1: Reduce VMT**. Reduce VMT in accordance with the reduction target set by the California Air Resources Board (CARB) for the Santa Barbara County Association of Governments (SBCAG) region ~~below regional averages on~~ a "per resident" and "per employee" basis. ~~and disperse peak hour traffic to better utilize the existing and planned transportation infrastructure.~~
>
> > **Action CIR-7.1.1:** Maintain VMT thresholds consistent with State guidelines for use in evaluating potential traffic impacts from projects subject to CEQA.
>
> **Policy CIR-7.2: Prioritize land use development patterns that reduce VMT.** Prioritize infill and mixed-use development and encourage new development near existing employment, housing, schools, commercial centers, and other services and amenities.
>
> **Policy LU-4.3: Mixed-use development.** Support vertical and horizontal mixed-use development, integrating residential uses along Broadway and Main Street to promote a pedestrian-focused environment in the core of the city and reduce vehicle trips.

Potential future VMT impacts from individual developments in Santa Maria would be evaluated based on local VMT thresholds established by the City. While the potential impacts of individual developments in Santa Maria are speculative, and in spite of the fact that future development alone (excluding existing development from the calculation) would meet CARB's VMT reduction target, the combined Future (2045) conditions forecast for the 2045 General Plan Update does not meet the 17% VMT reduction target, and would be inconsistent with CEQA Guidelines Section 15064.3(b), which is a potentially significant impact.

Mitigation Measures

The 2045 General Plan Update includes policies which would reduce VMT to the extent feasible. However, given the legacy development pattern embodied in existing development in the city, there is no set of General Plan policies or mitigation measures that could feasibly reduce per-unit VMT below the threshold.

Significance After Mitigation

Because there is no set of General Plan policies or mitigation measures that could feasibly reduce per-unit VMT below the threshold beyond what has already been included, this impact would remain significant and unavoidable.

Threshold 3:	Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?
Threshold 4:	Would the project result in inadequate emergency access?

Impact TRA-3 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD COMPLY WITH STATE, SANTA MARIA FIRE DEPARTMENT, AND CITY REQUIREMENTS RELATED TO TRANSPORTATION DESIGN SAFETY AND EMERGENCY ACCESS. WITH ADHERENCE TO THESE REQUIREMENTS, THE 2045 GENERAL PLAN UPDATE WOULD NOT SUBSTANTIALLY INCREASE HAZARDS DUE TO A GEOMETRIC DESIGN FEATURE OR RESULT IN INADEQUATE EMERGENCY ACCESS, AND THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

The Santa Maria Municipal Code includes a set of standard construction details, which include, but are not limited to, general specifications, drainage details, curb, driveway, sidewalk and access ramp details, typical street section, water system details and sanitary sewer system details. As individual developments are proposed, project applicants would be required to follow appropriate design guidelines in implementing roadway improvements that are necessary to alleviate transportation hazards. Therefore, implementation of the 2045 General Plan Update would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

Construction activities associated with new development facilitated by the plan could temporarily impair emergency access points used for emergency access vehicles. However, any construction on State highway systems (i.e., U.S. 101, SR 135, and SR 166) would be required to create a temporary traffic control plan that adheres to the standards set forth in the most recent version of the California Manual of Uniform Traffic Control Devices (Caltrans 2014, revised 2025). Construction within a public easement or right-of-way would be required to obtain an encroachment permit from the City's Public Works Department. Accordingly, construction activities would not result in substantial impairment of emergency access in Santa Maria.

Operation of development facilitated by the 2045 General Plan Update could result in alterations to existing transportation infrastructure, including, but not limited to, sidewalks and driveways. Future development would be required to adhere to applicable state and City of Santa Maria Fire Department design standards for emergency vehicle access, such as California Code of Regulations Title 19, Article 3, Section 3.05 which requires access roads from every building to a public street to be all-weather hard-surfaced right-of-way not less than 20 feet in width.

In addition to existing State and local requirements, the 2045 General Plan Update proposes policies that would ensure transportation safety and maintain adequate emergency access. These policies include the following:

> **Policy CIR-1.3: Complete Streets in new development**. Condition approvals of new development with street improvements and access provisions, to the extent feasible, that would be necessary to maintain multimodal operating standards and require complete street amenities consistent with the General Plan and accepted standards for new public and private streets.

Action CIR-1.3.1: Update the Santa Maria Municipal Code to establish active transportation infrastructure standards for new development, such as minimum requirements for bicycle storage/lockers and requiring integration with existing nearby bicycle, pedestrian, and transit infrastructure.

Policy CIR-1.4: Bicycle and pedestrian facilities. Consistent with the Bikeway Network and Pedestrian Priority improvement Network diagrams, develop bicycle and pedestrian facili to meet the transportation and recreational needs of the residents throughout the city, and where possible, provide separate bikeway access to major destinations (e.g., schools, parks, and commercial and employment centers) to ensure safety.

Action CIR-1.4.1: Implement the bicycle and pedestrian projects identified in the Pedestrian Priority Improvement Network diagram and the Active Transportation Plan.

Action CIR-1.4.2: Pursue all applicable revenue sources for the implementation of bicycle and pedestrian facilities.

Policy CIR-1.9: Transportation studies. For all new larger developments or substantial improvements to existing development, require a transportation study to evaluate the potential effects on the transportation system associated with the proposed project prior to approval, including ensuring that the proposed project provides transportation amenities consistent with the General Plan. The requirement of transportation studies for new developments is at the discretion of City staff and determined on a case-by-case basis.

Policy CIR-1.10: Acceptable Traffic Levels of Service. ~~Multimodal operating standards~~. Maintain an acceptable peak hour level of service (LOS) of D or better, as determined using the most current edition of ~~based on~~ the Highway Capacity Manual (HCM) or other methodology formally adopted by the City Engineer, on all ~~at~~ arterial and collector roadways and at all signalized ~~street~~ intersections, except where achieving the LOS standard would result in unacceptable conditions for bicyclists, pedestrians, or transit users. Deficiency plans shall be required for developments that cause intersections to cross the LOS threshold. Provide low-stress travel conditions for bicyclists that achieve Bicycle Level of Traffic Stress (LTS) 2 or better on arterial and collector streets.

Traffic Impact Analyses: Traffic impact analyses (TIAs) shall be prepared using HCM-based methodologies or other methodology formally adopted by the City Engineer, consistent with the City's adopted traffic study guidelines.

Methodology: Where multiple methodologies are available to determine LOS, the City Engineer shall determine the appropriate analysis method based on facility type, context, and study purpose, including, as applicable:

- Control delay (seconds per vehicle) for signalized and unsignalized intersections; and
- HCM-defined performance measures for roadway segments, roundabouts, and other facilities.

Long-Range Planning Flexibility: For long-range planning horizons, area-wide planning efforts, or cumulative growth scenarios, LOS D need not be strictly maintained where the City determines that:

- Temporary or localized degradation of LOS is unavoidable; and

- Overriding transportation, land use, environmental, or community benefits justify the impact, supported by appropriate findings. Such determinations shall be made using HCM-based analysis or other methodology formally adopted by the City Engineer and documented in the applicable planning or environmental review documents. Downtown/Specific Plan Areas: Within designated specific plan areas or activity centers, including the Downtown Specific Plan area, projects that exceed City-established vehicle trip thresholds shall prepare a traffic impact analysis using HCM methodology or other methodology formally adopted by the City Engineer in accordance with City standards. Where the City determines that strict application of LOS D would conflict with adopted plan objectives, the City may approve alternative or equivalent transportation mitigation measures, including but not limited to multimodal improvements, transportation demand management strategies, or deficiency plans prepared consistent with State law.

Conditions of Development Approvals: Development approvals shall include conditions necessary to maintain or achieve LOS D unless alternative mitigation is approved pursuant to City policy.

Action CIR-1.10.1: Periodically review roadway and intersection performance using HCM metrics or other methodology formally adopted by the City Engineer and prioritize capital improvements to address identified deficiencies.

Policy CIR-1.11: Bicycle Level of Traffic Stress. Provide low-stress travel conditions for bicyclists that achieve Bicycle Level of Traffic Stress (LTS) 2 or better on arterial and collector streets (see the Bicycle Level of Traffic Stress standard above).

Policy CIR-2.1: Preservation of right-of-way. Require appropriate right-of-way dedications or public access easements of all new developments to facilitate the construction of transportation facilities shown in the Street Network, Bikeway Network, and Pedestrian Improvement Network diagrams as well as the bicycle and pedestrian projects recommended by the Active Transportation Plan, including protection of right-of-way for future streets and trails.

Policy CIR-5.2: Safe Routes to School. Promote pedestrian safety and connectivity between homes and schools by implementing infrastructure improvements (e.g., sidewalks, crosswalks, traffic calming measures, and bike lanes) to ensure safe, accessible pathways for students.

In addition, future development facilitated by the 2045 General Plan Update would be reviewed by City staff to ensure consistency with all applicable City and State design standards, including standards for project access points, location, and design, sight lines, roadway modifications, provisions for bicycle, pedestrian, and transit connections, and emergency access. As a result, these impacts would be less than significant.

Mitigation Measures

No mitigation is required because this impact would be less than significant.

4.7.4 Cumulative Impacts

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, *Environmental Setting,* Subsection 3.3, *Cumulative Development*.

By its nature, a general plan considers cumulative impacts insofar as it considers cumulative development that could occur within the City Limits and annexation areas. All new development in the City and annexation areas would be required to comply with local regulations and policies related to the circulation system, including transit, roadway, bicycle and pedestrian facilities. Cumulative development in Santa Maria would be required to comply with 2045 General Plan Circulation Element policies. Accordingly, cumulative projects would have a less than significant impact related to conflicts with programs, plans, ordinances or policies addressing the circulation system.

Cumulative development could result in changes to regional baseline VMT conditions that conflict with *CEQA Guidelines* section 15064.3, subdivision (b) and therefore create a significant cumulative impact. As discussed in Impact TRA-2, implementation of the 2045 General Plan Update would not meet the 17% VMT reduction target required to be consistent with CEQA Guidelines Section 15064.3(b). Because the analysis for the 2045 General Plan Update is based on citywide VMT calculations in comparison to SBCAG regional VMT estimates, the 2045 General Plan's project-level significant and unavoidable impact on VMT implies that the 2045 General Plan Update would have a cumulatively considerable contribution toward regional cumulative VMT impacts. Therefore, cumulative VMT impacts would be significant, and the 2045 General Plan Update would have a cumulatively considerable contribution on VMT impacts.

Some types of transportation impacts are related to site- and project-specific characteristics, and conditions would not be significantly affected by other development outside Santa Maria. Compliance with applicable regulations and oversight, including Caltrans design guidelines, City design guidelines, and – for development outside Santa Maria – Santa Barbara County Fire Department standards would effectively reduce the potential for individual projects to create a cumulative transportation hazard or emergency access impacts within Santa Maria, as well as Santa Barbara County. Therefore, cumulative impacts related to transportation hazards and emergency access would be less than significant.

This page intentionally left blank.

4.8 Utilities and Service Systems

This section evaluates potential effects on utilities related to adoption and implementation of the 2045 General Plan Update by identifying existing and planned service availability and anticipated demands and determining whether any necessary utility upgrades would result in adverse environmental effects. Potential impacts related to stormwater runoff are evaluated and discussed in Section 4.5, *Hydrology and Water Quality*. Potential impacts related to the use of electricity and natural gas are evaluated and discussed in Section 4.10, *Effects Found Not to be Significant*.

4.8.1 Setting

a. Water Supply and Demand

The City of Santa Maria provides municipal drinking water supply within the City's water service area, which is generally bounded by the City limits and includes a portion of the annexation area. The remainder of the annexation area is served by private water wells. The City of Santa Maria water supply is comprised of a blend of groundwater and imported water from the State Water Project. The City owns a public water system with 22,888 active domestic water service connections which primarily serve residential, commercial, and industrial land uses within City Limits (2021). Water conservation has been a focus for the City and is reflected in the long-term demand forecasts. The City's water portfolio is comprised of the following water supply sources: local groundwater, purchased water from the State Water Project (SWP), associated return flows recaptured from the Santa Maria River Valley Groundwater Basin, assigned rights to water from the Basin as governed by a settlement agreement (*Santa Maria Valley Water Conservation District vs. City of Santa Maria, et al., Case No. 770214)* and commonly known as the Santa Maria Groundwater Adjudication, and assigned rights to augmented yield from Twitchell Reservoir. The Twitchell Reservoir is located in southern San Luis Obispo County and northern Santa Barbara County, on the Cuyama River, approximately 4 miles northeast of the city.

The California Department of Water Resources (DWR) operates the SWP and imported water supplies for the City are obtained from the SWP via a contract with Central Coast Water Authority (CCWA). The City has a Water Supply Agreement with CCWA for 17,820 acre feet per year of imported SWP water. However, based on the rainfall, Sierra snowpack, and State reservoir levels each year the percentage allocation of State Water varies. SWP water originates within the Feather River watershed, is captured in Lake Oroville, and flows via the Sacramento-San Joaquin Delta, the California Aqueduct, and the Coastal Branch Extension, into CCWA's treatment and conveyance facilities. Pursuant to the Stipulation[1], Santa Maria agreed to import and use within the Basin no less than 10,000 acre feet per year of available SWP water, or the full amount of available SWP water if the amount available is less than 10,000 AF in a given year.

[1] The Santa Maria Basin (Basin) is adjudicated, and therefore, already managed. The City's rights to rely on Basin water resources for both pumping and storage are governed by a settlement agreement ("Stipulation") signed by a majority of the parties *(Santa Maria Valley Water Conservation District vs. City of Santa Maria, et al., Case No. 770214*), commonly known as the "Santa Maria Groundwater Adjudication." The Stipulation provides the City with quantifiable and certain water rights. Prior to the groundwater adjudication, these rights were not quantifiable. The Stipulation also establishes a framework for both permanent and temporary transfers of water rights within the Basin. Because the City has obtained quantifiable water rights, the City has greater flexibility in facilitating transfers and exchanges.

Groundwater for the City is supplied by six active wells in the Santa Maria River Valley Groundwater Basin. The Basin has a surface area of approximately 184,000 acres, or 287.5 square miles. The Basin is bounded by the San Luis and Santa Lucia Ranges on the north, by the San Rafael Mountains on the east, by the Solomon Hills on the south, by the Casmalia Hills on the southwest, and by the Pacific Ocean on the west. The City has an allowed groundwater pumping right of 5,100 AF per year (City of Santa Maria 2021).

The Twitchell Reservoir operates as a flood control and water conservation reservoir. Releases are controlled from Twitchell Reservoir to maximize recharge of the Santa Maria River Valley Groundwater Basin through percolation in the Santa Maria Riverbed. The settlement agreement sets the amount of the Twitchell yield at 32,000 AF per year. The City is entitled to 14,300 AF of that yield annually (City of Santa Maria 2021).

Table 4.8-1 shows the City's anticipated water supply and demand through 2045. Also shown is the water demand associated with implementation of the 2045 General Plan Update, included as the "buildout" column. [2] As shown therein, the City projects that water demand would be met by existing water supplies in all years except Year Five of a multi-year drought in 2025 and 2030 (City of Santa Maria 2020a).

Table 4.8-1 Projected Water Supply and Demand in Acre-Feet

	2025	2030	2035	2040	2045	Maximum Buildout[1]
Normal Year						
Supply Totals	36,558	36,403	36,250	36,095	35,941	35,941
Demand Totals	15,026	17,247	17,869	18,490	18,716	20,237
Surplus	**21,532**	**19,156**	**18,381**	**17,605**	**17,225**	**15,704**
Single Dry-Year						
Supply Totals	26,419	26,571	26,724	26,876	27,029	27,029
Demand Totals	15,026	17,247	17,869	18,490	18,716	20,237
Surplus	**21,532**	**19,156**	**18,381**	**17,605**	**17,225**	**6,792**
Multiple Dry-Years						
Year One						
Supply Totals	29,189	29,662	30,136	30,610	31,084	31,084
Demand Totals	15,026	17,247	17,869	18,490	18,716	20,237
Surplus	**14,163**	**12,415**	**12,267**	**12,120**	**12,368**	**10,847**
Year Two						
Supply Totals	39,605	28,989	28,374	27,758	27,143	27,143
Demand Totals	15,026	17,247	17,869	18,490	18,716	20,237
Surplus	**24,579**	**11,742**	**10,505**	**9,268**	**8,427**	**6,906**

[2] Buildout assumed in the Annexation Study Technical Memorandum prepared by WSC in December 2024, was estimated to be 60,687. Population for the Annexation Study Technical Memorandum was calculated using the United States Census persons per household rate of 3.76. The plan's estimated addition of 16,140 units was multiplied by the persons per household rate of 3.76 for a total of 60,687 persons. This calculation represents a conservative analysis in which every potential residential unit (16,140 as described in Section 2.6.5, Proposed 2045 General Plan Buildout) is occupied at the full potential persons per household rate.

	2025	2030	2035	2040	2045	Maximum Buildout[1]
Year Three						
Supply Totals	27,169	26,417	25,665	24,913	24,161	24,161

() indicates a negative number

[1] Water demand associated with implementation of the 2045 General Plan Update was determined in a Technical Memorandum prepared by WSC in December 2024 and is included as Appendix D to this EIR.

Source: City of Santa Maria 2020a

b. Sewer Collection and Wastewater Treatment

The City provides wastewater collection and treatment services within the wastewater service area, which includes the city limits and an area to the south of the city that is outside city limits. The City's wastewater treatment facility is rated to treat 13.5 million gallons per day of wastewater. The annexation area is not currently serviced by the City's wastewater collection and treatment services are instead serviced by Onsite Sewage Disposal Systems, or septic tanks. Liquid waste haulers permitted through the city that collect wastewater within the annexation area may dispose of liquid waste at the City of Santa Maria Septage Receiving Station at the treatment plant (City of Santa Maria 2025).

Sewer Collection

The City's wastewater collection system consists of eight wastewater basins with associated trunk sewers and one treatment plant. The basins generally drain east to west to trunk lines that run to the treatment plant. The treatment plan is located at 601 South Black Road within the City of Santa Maria's westernmost city limit. The wastewater collection system is comprised of approximately 250 miles of gravity-flow sewer pipes and mains, and one lift station with 0.2 mile of force main serving 117 residential parcels. Most of the older pipes are constructed of vitrified clay pipe and newer pipes of polyvinyl chloride pipe. Sewer mains range in size from four inches to 30 inches in diameter, with 60 percent constructed of vitrified clay pipe, 25 percent constructed of polyvinyl chloride, and the remaining constructed of presently unknown material.

Wastewater Treatment

The City owns and operates a treatment plant located at 601 Black Road. In March 2010, the hydraulic capacity of the existing facility was evaluated and improvements were made to the system to increase capacity from 9.5 Million Gallons Per Day (MGD) to 13.5 MGD (City of Santa Maria 2020b; City of Santa Maria, n.d.). The treatment processes consist of headworks, grit removal,

primary clarifiers, trickling filters, intermediate clarifier, secondary trickling filters, secondary clarifiers, gravity sludge thickeners, anaerobic digesters, and sludge drying beds. The treated wastewater is discharged to percolation ponds located adjacent to the site.

The average daily sewage flow as measured at the treatment plant, calculated by totalizing the flow over a period and dividing by the number of days in that period. In the case of average annual flow, the period is a 365-day calendar year. The Utilities Capacity Study lists average annual flow as 9.99 MGD in 2024 (City of Santa Maria 2015). The peak hour wet weather flow, which is the theoretical maximum sustained sewage flow the collection system will experience, was estimated as 19.98 MGD in 2024 (City of Santa Maria 2020b).

c. Stormwater Facilities

The City of Santa Maria and the Santa Barbara County Flood Control and Water Conservation District (SBCFCD) provide stormwater conveyance, management, and recharge facilities in and around the city. The City and SBCFCD jointly developed regional recharge basins west of Blosser Road and south of Stowell Road (the Getty Basin, Hobbs Basin, and Kovar Basins). These basins are designed to retain stormwater and allow that water to percolate into the groundwater basin. Groundwater recharge programs currently replenish the Basin by recharging more than 20,000 AF of water annually through the Santa Maria River, local retardation basins, and regional recharge basins.

Stormwater within Santa Maria that does not infiltrate into the ground becomes surface runoff, which either flows into surface waterways or is channeled into the City's stormwater system. The flood control facilities owned and operated by the SBCFCD are key flood control facilities in the city. Channels owned and operated by the SBCFCD are currently listed as impaired waterbodies under the Clean Water Act Section 303(d) list. Once a water body has been added to the State's list of impaired waters it stays there until the State develops a Total Maximum Daily Load (TMDL) and the EPA approves it. Once a TMDL is developed, a water body is no longer on the 303(d) list, but it is still tracked until the water is fully restored. These flood control facilities are as follows:

- Blosser Channel. The concrete lined portion of the Blosser Channel flows northward along the western side of the city and discharges via a culvert to an earthen portion, which discharges through the levee to the Santa Maria River. High flows from Blosser Channel flow via a spillway into the Blosser Basin, which is a large flood control facility. Vegetation becomes established rapidly in the earthen portions and must be continually removed by the SBCFCD to protect against blockages and flooding.
- Bradley Channel. Bradley Channel, a concrete lined ditch, begins in the farm fields south of East Betteravia Road. This ditch runs north toward the Santa Maria River bordering the farm fields as it enters the residential neighborhoods north of East Jones Street. The flow source is almost entirely from heavily sediment-laden agriculture runoff. During storm events, it also receives some stormwater from City neighborhoods. Sediment is removed from the channel by the SBCFCD on a maintenance schedule. The earthen ditches upstream are sprayed with pesticides to control weeds. Sediment deposition and vegetation reduce volume capacity in the unlined ditches. As it enters the residential neighborhoods, the channel travels until it reaches the manmade lake at Jim May Park. This manmade lake operates as a settling basin for the Bradley Channel, which carries constant agricultural flows. The lake has no natural water source. It collects the agricultural flows, and in storm events, runoff from the surrounding neighborhoods combines with the agricultural flow. Flows from the Bradley Channel are directed under the US-101 freeway as the channel continues westward through the city where it eventually combines

with the Blosser Channel flow and discharges through the levee to the Santa Maria River. High flows are partially diverted into the Blosser Basin.

- Main Street Channel. Stormwater from the central part of the city discharges to the Main Street Channel through a large underground storm drainpipe that flows west along the south side of West Main Street. The Main Street Channel collects agricultural runoff and flow from the City's MS4. The Main Street Channel, which is a degraded, unlined roadside ditch that runs west from the western city limits at Hanson Way parallel to West Main Street for approximately 1.5 miles. At that point, it flows under West Main Street through a culvert and enters a SBCFCD facility known as the Unit II Ditch. The Unit II Ditch continues north for approximately two miles where it discharges through the levee to the Santa Maria River. Overflow from the Getty, Hobbs, and Kovar basins also discharge into the Main Street Channel.

The City of Santa Maria proactively manages stormwater within its city limits. Historically, the City has focused on the impacts of stormwater as it relates to flood control; however, in the last decade additional regulations have been adopted in the State of California which specifically address the discharge quality of stormwater from a City's stormwater conveyance system (City of Santa Maria 2025a). Discharges from the City's storm drain system to the Santa Maria River and ultimately the Pacific Ocean are regulated in accordance with the State Water Resources Control Board's National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges from Small General Municipal Separate Storm Sewer Systems (Phase II MS4), Order No. 2013-0001-DWQ (Division of Water Quality) NPDES No. CAS000004. In recent years, new developments in Santa Maria have been designed to comply with state regulations, incorporating features such as retention basins and bio swales to enhance stormwater infiltration and reduce stormwater runoff. The City and SBCFCD have instituted several programs to improve and increase groundwater recharge to the Santa Maria Basin, including adoption of Low-Impact Development guidelines and construction of recharge basins. These basins are intended to slow the movement of stormwater and allow the stormwater to percolate into the groundwater basin to recharge it.

d. Solid Waste

The City of Santa Maria provides solid waste collection services through its Utilities Department. The annexation area is currently serviced by MarBorg industries for solid waste collection. Residential trash collection is mandatory and occurs once per week, while recycling is collected every other week (City of Santa Maria 2025b). All municipal and MarBorg Industries collected solid waste is transferred to the Santa Maria Regional Landfill located at 2065 East Main Street in Santa Maria. The Santa Maria Regional Landfill has a maximum permitted daily throughput of 8,820 tons per week and a remaining capacity of approximately 2,845,000 cubic yards and is estimated to remain operational through 2034 (California Department of Resources, Recycling, and Recovery [CalRecycle] 2025a).

Beyond 2034, solid waste generated by the city may be diverted to other nearby landfills, such as the Cold Canyon Landfill. The Cold Canyon Landfill has a maximum permitted daily throughput of 1,650 tons per day and a remaining capacity of approximately 13,000,000 cubic yards and is estimated to remain operational through 2040 (CalRecycle 2025c).

e. Electricity, Natural Gas, and Telecommunications

Pacific Gas & Electric

Pacific Gas and Electric (PG&E) provides transmission lines to convey electric power supply to Santa Maria. PG&E is one of the nation's largest electric and gas utility companies, and it maintains 106,681 circuit miles of electric distribution lines and 18,466 circuit miles of interconnected transmission lines (PG&E 2025).

Central Coast Community Energy

Central Coast Community Energy (3CE) is a Community Choice Aggregator established by local communities to source clean and renewable electricity and is responsible for procuring power for Santa Maria. In 2023, 3CE's power mix consisted of 30.3 percent renewable resources, 0.4 percent large hydroelectric facilities, and 69.3 percent unspecified power (3CE 2025).

Southern California Gas Company

Santa Maria is in the natural gas service area of the Southern California Gas Company (SoCalGas) which spans central and southern California. SoCalGas' distribution network is composed of approximately 51,070 miles of gas mains across an approximate 20,000 square mile service territory (California Gas and Electric Utilities 2025). Natural gas supplied by SoCalGas is sourced from gas fields in several sedimentary basins in the western U.S. and Canada including supply basins located in New Mexico (San Juan Basin), West Texas (Permian Basin), Rocky Mountains, western Canada, and local California supplies (California Gas and Electric Utilities 2025).

Telecommunications

Telecommunication services, including broadband, cellular, and wireless services, are provided to residents and businesses from a variety of private companies, including national retailers Comcast, AT&T, Verizon, and T-Mobile and regional retailers such as Frontier, Hughesnet, Viasat, and Ranch WiFi (HighSpeenInternet.com 2025).

4.8.2 Regulatory Setting

a. Federal Regulations

Title 40 of the Code of Federal Regulations

Title 40 of the Code of Federal Regulations, Part 258 (Resource Conservation and Recovery Act, Subtitle D) contains regulations for municipal solid waste landfills and requires states to implement their own permitting programs incorporating the federal landfill criteria. The federal regulations address the location, operation, design, groundwater monitoring, and closure of landfills.

b. State Regulations

California Sustainable Groundwater Management Act

In September 2014, Governor Brown signed legislation requiring that California's critical groundwater resources be sustainably managed by local agencies. The Sustainable Groundwater Management Act gives local agencies the power to sustainably manage groundwater and requires

groundwater sustainability plans to be developed for medium- and high-priority groundwater basins. The Santa Maria River Valley Basin is a very low priority basin (DWR 2025). Because of this, and because the Basin is adjudicated, a groundwater sustainability plan has not been prepared for this basin.

Water Conservation Act of 2009

The Water Conservation Act of 2009 (Senate Bill [SB] X7-7), effective November 9, 2009, requires each urban retail water supplier to develop urban water use targets and agricultural water suppliers to implement efficient water management practices. Because of the small size of the City of Solvang, it has fewer than 3,000 service connections, and is therefore not considered an "urban" water supplier.

Assembly Bill 1881

Assembly Bill (AB) 1881 expanded previous legislation related to landscape water use efficiency. AB 1881, the Water Conservation in Landscaping Act of 2006, enacted landscape efficiency recommendations of the California Urban Water Conservation Council for improving the efficiency of water use in new and existing urban irrigated landscapes in California. AB 1881 required the California Department of Water Resources to update the existing Model Local Water Efficient Landscape Ordinance and local agencies to adopt the updated model ordinance or an equivalent. The law also requires the California Energy Commission to adopt performance standards and labeling requirements for landscape irrigation equipment, including irrigation controllers, moisture sensors, emission devices, and valves to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy or water.

California Senate Bills 610 and 221 (Water Supply Assessment and Verification)

Senate Bills (SB) 610 and 221 amended State law, effective January 1, 2002, to improve the link between the information on water supply availability and certain land use decisions made by cities and counties. Both statutes require detailed information regarding water availability to be provided to city and county decision-makers prior to approval of specified large development projects with greater than 500 dwelling units or 500,000 square feet of commercial space. Both statutes also require this detailed information to be included in the administrative record that serves as the evidentiary basis for an approval action by the city or county on such projects. Under SB 610 water assessments must be furnished to local governments for inclusion in any environmental documentation for certain projects as defined in Water Code 10912 subject to CEQA. Under SB 221 approval by a city or county of certain residential subdivisions requires an affirmative written verification of sufficient water supply.

California Water Plan

The California Department of Water Resources is responsible for preparing and updating the California Water Plan, which is a policy document that guides the development and management of State water resources. The plan is updated every five years to reflect changes in resources and urban, agricultural, and environmental water demands. The California Water Plan suggests ways of managing demand and augmenting supply to balance water supply with demand.

California Urban Water Management Planning Act

In 1983 the California Legislature enacted the Urban Water Management Planning Act (Water Code Section 10610–10656). The Act states that every urban water supplier that provides water to 3,000 or more customers, or that provides over 3,000 acre-feet annually, should make every effort to ensure the appropriate level of reliability in its water service sufficient to meet the needs of its various categories of customers during normal, dry, and multiple dry years. The Act requires that urban water suppliers adopt an urban water management plan at least once every five years and submit them to the Department of Water Resources. Noncompliant urban water suppliers are ineligible to receive funding pursuant to Division 24, commencing with Section 78500, or Division 26, commencing with Section 79000, or receive drought assistance from the State until the Urban Water Management Plan (UWMP) is submitted and deemed complete pursuant to the Urban Water Management Planning Act.

California Senate Bill 7x7 (Statewide Water Conservation)

In November 2009 the California State Legislature passed and the Governor approved a comprehensive package of water legislation, including SB 7x7 addressing water conservation. In general SB 7x7 requires a 20 percent reduction in per capita urban water use by 2020, with an interim 10 percent target in 2015. The legislation requires urban water users to develop consistent water use targets and to use those targets in their UWMPs.

Senate Bills 350 and 100

The Clean Energy and Pollution Reduction Act of 2015 (SB 350) requires the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources to be increased to 50 percent by December 31, 2030. This act also requires doubling of the energy efficiency in existing buildings by 2030.

Adopted on September 10, 2018, SB 100 supports the reduction of GHG emissions from the electricity sector by accelerating the State's Renewables Portfolio Standard Program, last updated by SB 350. SB 100 requires electricity providers to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020, 44 percent by 2024, 60 percent by 2030, and 100 percent by 2045.

Senate Bill 1374

SB 1374 states that the California Integrated Waste Management Board (CIWMB) must receive an annual report, including progress made by jurisdictions in regard to their advances on diverting construction and demolition waste material. The CIWMB specified that CalRecycle was required to adopt a model ordinance that would divert 50 percent to 75 percent of construction and demolition waste materials from landfills.

California Assembly Bill 939

AB 939 (Public Resources Code 41780) requires cities and counties to prepare integrated waste management plans and to divert 50 percent of solid waste from landfills beginning in calendar year 2000 and each year thereafter. AB 939 also requires cities and counties to prepare Source Reduction and Recycling Elements as part of the integrated waste management plans. These elements are designed to develop recycling services to achieve diversion goals, stimulate local recycling in manufacturing and stimulate the purchase of recycled products.

California Assembly Bill 341

The purpose of AB 341 is to reduce greenhouse gas emissions by diverting commercial solid waste to recycling efforts and to expand the opportunity for additional recycling services and recycling manufacturing facilities in California. AB 341 required all businesses that generate four or more cubic yards of garbage per week and multi-family dwellings with five or more units to recycle by July 1, 2012. AB341 also sets a statewide goal of 75 percent waste diversion.

California Senate Bill 1016

SB 1016 requires that the 50 percent solid waste diversion requirement established by AB 939 be expressed in pounds per person per day. SB 1016 changed the California Department of Resources, Recycling, and Recovery's (CalRecycle) review process for each municipality's integrated waste management plan. After an initial determination of diversion requirements in 2006 and establishing diversion rates for subsequent calendar years, the Board reviews a jurisdiction's diversion rate compliance in accordance with a specified schedule. Beginning January 1, 2018, the Board will be required to review a jurisdiction's source reduction and recycling element and hazardous waste element once every two years.

California Senate Bill 1383

SB 1383 was adopted in September 2016 and establishes targets to achieve a 75 percent reduction in the level of Statewide landfilled organic waste from the 2014 level by 2025. The law grants CalRecycle the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025. In addition, SB 1383 regulations require that jurisdictions conduct education and outreach on organics recycling to all residents, businesses, haulers, solid waste facilities, and local food banks and other food recovery organizations.

California Energy Commission

As the State's primary energy policy and planning agency, the California Energy Commission (CEC) collaborates with State and federal agencies, utilities, and other stakeholders to develop and implement State energy policies. Since 1975, the CEC has been responsible for reducing the State's electricity and natural gas demand, primarily by adopting new Building and Appliance Energy Efficiency Standards that have contributed to keeping California's per capita electricity consumption relatively low. The CEC is also responsible for the certification and compliance of thermal power plants 50 megawatts and larger, including all project-related facilities in California.

California Public Utilities Commission

The California Public Utilities Commission (CPUC) regulates investor-owned electric and natural gas utilities operating in California. The energy work responsibilities of the CPUC are derived from the California State Constitution, specifically Article XII, Section 3 and other sections more generally, numerous State legislative enactments and various Federal statutory and administrative requirements. The CPUC regulates natural gas utility service for customers that receive natural gas from PG&E and other natural gas utilities across California.

California Green Building Standards

The California Green Building Standards Code, commonly referred to as "CALGreen" originally went into effect on August 1, 2009 and outlines architectural design and engineering principles that are in synergy with environmental resources and public welfare. CALGreen sets minimum standards for buildings, and since 2016, applies to new building construction and some alterations/additions within certain parameters. CALGreen establishes planning and design standards for sustainable site development, including water conservation measures and requirements that new buildings reduce water consumption by 20 percent below a specified baseline. CALGreen requires installations of 1.28 gallons-per-flush toilets and 0.5-gallon-per flush urinals for all non-residential projects as part of the prescriptive method of reducing indoor water use by the required 20 percent.

CALGreen lays out the minimum requirements for newly constructed residential and non-residential buildings to reduce GHG emissions through improved efficiency and process improvements. It also includes voluntary tiers to encourage building practices that improve public health, safety, and general welfare by promoting a more sustainable design. In addition, CALGreen includes several requirements related to solid waste diversion. Importantly, new non-residential construction is required to achieve at least 65 percent construction and demolition waste diversion and provide recycling areas for paper, cardboard, glass, plastics, metal, and organic waste. The 2022 CALGreen update primarily includes new requirements for the inclusion of electric vehicle charging stations and carbon dioxide monitoring and controls in classrooms. These requirements went into effect January 1, 2023.

c. Local Regulations

Santa Maria River Valley Groundwater Basin Final Amended Judgement

The Final Amended Judgment for the Santa Maria River Valley Groundwater Basin establishes a legal framework for managing groundwater rights among various parties, including cities, water companies, and landowners. It affirms the City of Santa Maria and Golden State Water Company's prescriptive rights to groundwater against non-stipulating parties, grants return flow rights from imported water, and prioritizes the Northern Cities' rights to 7,300 acre-feet annually. The judgment enforces groundwater monitoring, restricts water export outside the basin, and protects overlying rights subject to prescriptive claims. It binds all current and future property owners in the basin, retains court jurisdiction for enforcement and future adjustments, and mandates compliance with state and federal water quality laws.

City of Santa Maria Urban Water Management Plan

The 2020 UWMP was adopted on June 15, 2021, and it serves as a critical document for long-term water planning, helping the city prepare for future growth and potential water shortages. Santa Maria's UWMP outlines comprehensive strategies to ensure sustainable water use, including water supply, conservation, and demand management (City of Santa Maria 2020a).

City of Santa Maria Sewer System Management Plan

The Sewer System Management Plan was adopted in July 2009 and outlines how the City should properly manage, operate, and maintain all portions of the City's wastewater collection and treatment system. It also provides methods to meet capacity to convey the City's peak wastewater flows, minimize the frequency of sewer system overflows, and mitigate the impacts that are

associated with any sewer overflows that may occur. The plan also seeks to meet all applicable regulatory notification and reporting requirements (City of Santa Maria 2009).

City of Santa Maria Municipal Code

Chapter 8-10

Chapter 8-10 of the Santa Maria Municipal Code outlines the regulations and requirements for water service within the city. It covers the procedures for applying for water service, the responsibilities of both the city and the customers, and the standards for water meters and connections. The chapter also details the billing process, including rates, payment schedules, and penalties for late payments. Additionally, it addresses issues related to water conservation, such as restrictions on water use during drought conditions and the implementation of water-saving measures. The overall goal is to ensure a reliable and efficient water supply for all residents and businesses in Santa Maria.

Chapter 8-10A

Chapter 8-10A of the Santa Maria Municipal Code addresses the prevention of cross connections in the City's water supply system. It establishes regulations to protect the public water supply from contamination due to backflow, which can occur when non-potable water or other substances enter the potable water system. The chapter outlines the requirements for installing and maintaining backflow prevention devices, conducting regular inspections, and ensuring compliance with state and federal standards. It also specifies the responsibilities of property owners and the city in preventing cross connections. The overall goal is to safeguard public health by maintaining the integrity and safety of the water supply.

Chapter 8-11

Chapter 8-11 of the Santa Maria Municipal Code addresses the regulations for refuse collection and recycling within the city. It outlines the responsibilities of both the city and residents in managing waste, including the mandatory use of city-provided containers for trash, recyclables, and green waste. The chapter specifies the collection schedules, container placement guidelines, and the types of materials that can be recycled. It also includes provisions for bulky item pickup and the proper disposal of hazardous waste. The goal is to ensure efficient waste management, promote recycling, and maintain a clean and healthy environment for the community.

Chapter 8-12

Chapter 8-12 of the Santa Maria Municipal Code focuses on water conservation and water supply regulations. It includes guidelines on permissible water usage, particularly emphasizing restrictions during drought conditions to ensure sustainable water management. The chapter also outlines requirements for maintaining water supply infrastructure, aiming to prevent leaks and ensure efficient operation. Additionally, it sets standards for wastewater treatment and discharge to protect water quality and public health. These regulations are designed to manage the city's water resources responsibly, ensuring long-term availability and environmental protection.

Chapter 8-14

Chapter 8-14 of the Santa Maria Municipal Code outlines the regulations for drainage fees within the area of North Blosser Road and Battles Road and the Orcutt Drainage Plan area. It specifies the

fees that property owners must pay to fund the construction, maintenance, and improvement of the city's drainage facilities. These fees are assessed based on the type and extent of development on a property, ensuring that the costs are fairly distributed among those who benefit from the drainage system. The chapter also includes provisions for fee adjustments, exemptions, and the process for appealing fee assessments. The overall goal is to ensure adequate funding for the city's drainage infrastructure, thereby reducing the risk of flooding and maintaining public safety.

Chapter 8-15

Chapter 8-15 of the Santa Maria Municipal Code implements a unified growth mitigation fee program to fund the acquisition, design and construction of certain public facilities and related equipment necessary to serve new development within the City. Pursuant to this code, growth mitigation fees would be imposed as a condition of approval of a development project prior to the distributions of permits and map approvals. The growth mitigation fee would fund water, wastewater, traffic, recreation and parks, police, fire, and library services within the city.

Chapter 8-21

Chapter 8-21 of the Santa Maria Municipal Code focuses on reducing the disposal of organic waste. This chapter was established in compliance with California Senate Bill 1383, which mandates significant reductions in organic waste to combat climate change. The regulations require residents and businesses to separate organic waste, such as food scraps and yard trimmings, from regular trash. The chapter also outlines the responsibilities of the city in providing organic waste collection services and ensuring compliance through monitoring and enforcement. Additionally, it includes provisions for public education and outreach to promote proper organic waste disposal practices. The overall goal is to reduce landfill waste, lower greenhouse gas emissions, and support environmental sustainability.

4.8.3 Impact Analysis

a. Methodology and Significance Thresholds

Methodology

Impacts related to utilities and service systems were evaluated by forecasting utility demands associated with the 2045 General Plan Update and comparing estimated utility demands to current and planned service system capacity and availability. The following impact analysis relies on an Annexation Study Technical Memorandum prepared by WSC in December 2024 that evaluates water supply, wastewater generation, and wastewater system capacity and is included as Appendix E to this EIR. Utilities and service system demands of the 2045 General Plan Update have been quantified where possible, based on readily available information. Where insufficient data was able to quantify demands, such demands are discussed qualitatively in order to inform the impact analysis.

Significance Thresholds

CEQA Guidelines Appendix G provides the following significance thresholds to determine if a project would have a potentially significant impact on utilities and service systems. For the purposes of this EIR, implementation of the proposed project may have a significant adverse impact if it would:

1. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects;
2. Not have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years;
3. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;
4. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or
5. Fail to comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?
Threshold 3:	Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Impact UTIL-1 DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD INCREASE DEMAND FOR ADDITIONAL UTILITY INFRASTRUCTURE WHICH MAY REQUIRE RELOCATION OR CONSTRUCTION OF UTILITY FACILITIES OR SERVICES TO SERVE PLAN BUILDOUT BEYOND EXISTING CONDITIONS, SPECIFICALLY WITHIN THE ANNEXATION AREA. HOWEVER, DEVELOPMENT FACILITATED BY THE 2045 GENERAL PLAN UPDATE WOULD BE CONSTRUCTED CONSISTENT WITH APPLICABLE CITY CODE, BUILDINGS STANDARDS, AND ENGINEERING STANDARDS. THEREFORE, THESE IMPACTS WOULD BE LESS THAN SIGNIFICANT.

Water

Growth and development facilitated by the plan would create additional demand for water. Development facilitated by the plan would generally occur in developed areas of Santa Maria with existing water infrastructure; however, increased density in undeveloped areas, such as in the planned annexation area, could require additional water infrastructure and upgrades to existing infrastructure. Potential environmental impacts associated with developing new water supply connections would be evaluated as part of the City's review of individual development applications for consistency with applicable policies of the plan and City Municipal Code requirements. Water infrastructure, such as pipelines, could require upgrades for future development which would result in ground disturbance. Generally, this ground disturbance would occur in previously disturbed or developed areas, reducing the potential for environmental impacts. Such facilities would be installed during individual project construction and generally within the disturbance area of such projects or the rights-of-way of previously disturbed roadways; therefore, the construction of these infrastructure improvements would not substantially increase a project's disturbance area or otherwise cause significant environmental effects.

The annexation area currently lacks water infrastructure that is adequately sized to support the level of development envisioned under buildout conditions of the plan. Future development within these areas may require installation of new utility infrastructure to support anticipated development. However, installation of new utility infrastructure would be required to comply with all applicable provisions of the City of Santa Maria Municipal Code, as well as relevant building and engineering standards. Potential environmental impacts of developing new water infrastructure would be evaluated as necessary as part of the City's review of individual development applications. Consequently, any potential impacts related to water infrastructure within these areas would be reduced to a less than significant level.

In addition, Chapter 8-10 and Chapter 8-10A of the Santa Maria Municipal Code address and minimize additional water demand. Specifically, Section 8-10.33 seeks to promote water conservation and prevent water waste through outdoor water use restrictions. Sections 8-10A.05 and 8-10A.06 outline the requirements for future development that require installation of cross connections to install and maintain backflow prevention devices, conduct regular inspections, and ensure compliance with state and federal standards. Furthermore, the plan includes the following proposed goal and policy related to water facilities:

Goal PFS-2: Water resources. High-quality drinking water supply meets existing and future water demands.

> **Policy PFS-2.1: Water system.** Maintain and expand the existing water system to meet the daily and peak demands of existing and future city residents and businesses.

Because the water connections associated with implementation of the plan would be installed during individual project construction and would generally be located within the disturbance area of such projects or the rights-of-way of previously disturbed roadways, the relocation or construction of water facilities would not be expected to result in significant environmental impacts. Potential environmental impacts of the relocation or construction of water facilities would also undergo individual environmental review at the time a project is proposed. This impact would be less than significant.

Wastewater

Development facilitated by the plan would generally occur within the city and on sites that are already developed or surrounded by existing wastewater facilities. The annexation area currently lacks wastewater infrastructure to support the level of development envisioned under buildout conditions of the plan Future development within these areas may require installation of new utility infrastructure to support anticipated development. However, installation of new utility infrastructure would be required to comply with all applicable provisions of the City of Santa Maria Municipal Code, as well as relevant building and engineering standards. Furthermore, the potential environmental impacts of implementing new wastewater, such as sewer infrastructure, would be evaluated as necessary as part of the City's review of individual development applications for consistency with applicable policies of the plan and City Municipal Code requirements. Consequently, any potential impacts related to wastewater infrastructure within these areas would be reduced to a less than significant level. The plan includes the following goal and policies to ensure wastewater infrastructure would be available to serve future development facilitated by the plan:

Goal PFS-1: Public infrastructure. Public infrastructure provides a high level of service for the existing population and keeps pace with planned growth.

> **Policy PFS-1.1: Resource and infrastructure capacities.** Maintain resource and infrastructure standards and capacities to meet the city's existing and future needs.
>
> **Policy PFS-1.2: Wastewater system.** Maintain a wastewater collection, treatment, and disposal system capable of meeting the daily and peak demand of existing and future city residents and businesses.

The development facilitated by the plan would generate wastewater that requires treatment before discharge or reuse. For example, the plan envisions residential development that would include bathrooms with toilets and showers that generate wastewater. As discussed within the City's UWMP, the per capita wastewater generation for the City service area is approximately 68 gallons per day (GPD) (City of Santa Maria 2020a). This per capita wastewater generation factor was calculated based on the volume of wastewater currently generated by the customers in the City's wastewater system. At maximum buildout of the plan, with the assumption that each estimated residential unit would be occupied at the maximum persons per household rate, there would be an estimated 58,265[3] net new residents, resulting in approximately 167,613 total City residents by 2045. Therefore, utilizing the generation factor of 68 GPD, the proposed plan would create 11,397,684 GPD or 11.4 MGD.

As discussed above in Section 4.9.1, *Setting*, the City owns and operates a municipal treatment facility which is designed to treat an average annual flow of 13.5 MGD. In 2024, the average annual flow was estimated to be 9.99 MGD and the average peak hour wet weather flow as 19.98 MGD in 2024 (City of Santa Maria 2020b). Based on the plan's projected wastewater demand of 11.4 MGD, the treatment plant would have a remaining average annual flow treatment capacity of 2.1 MGD.[4] As such, the treatment plant would have sufficient capacity to serve the development facilitated by the plan during peak hour wet weather flows (maximum flows).

Buildout of the plan would increase wastewater flows to the treatment plant as compared to the 2024 average annual flow estimated at 9.99 MGD. However, this increase in wastewater flow is anticipated at full buildout in 2045. The City has planned sewer collection system projects identified in the 2012 Utilities Capacity Study and within the City of Santa Maria's Capital Projects which are required to meet the planned buildout population (City of Santa Maria 2015; City of Santa Maria 2016). Further, planned Capital Improvement Projects identified by the city would need to be implemented to accommodate growth facilitated by the plan within the city (City of Santa Maria 2020). These include upgrades to meet treatment capacity and replacements of infrastructure that have exceeded their useful lifespan. However, installation of new utility infrastructure would be required to comply with all applicable provisions of the City of Santa Maria Municipal Code, as well as relevant building and engineering standards, such that the potential environmental impacts of implementing new wastewater infrastructure would be evaluated as part of the City's review of individual development applications for consistency with applicable policies of the plan and City Municipal Code requirements. Therefore, with or without these planned improvements, the plan would not result in the relocation or construction of wastewater facilities that would reasonably be expected to result in significant environmental impacts. Additionally, with the in-process

[3] This calculation represents a conservative analysis in which every potential residential unit (16,140 as described in Section 2.6.5, Proposed 2045 General Plan Buildout) is occupied at the full potential persons per household rate of 3.61 as determined by the California Department of Finance.
[4] 2.1 MGD = 13.5 MGD – 11.4 MGD

improvements to the treatment plant, the treatment plant would have adequate capacity to serve the plan's projected demand in addition to the provider's existing commitments. Potential environmental impacts of additional wastewater infrastructure would also undergo individual environmental review at the time a project is proposed. This impact would be less than significant.

Stormwater

Development facilitated by the plan within city limits would not result in a substantial increase in stormwater infrastructure because Santa Maria is developed and equipped with an existing stormwater drainage system. The annexation area currently lacks stormwater infrastructure to support the level of development envisioned under buildout conditions of the plan. Future development within these areas requires installation of new utility infrastructure to support anticipated development. However, installation of new utility infrastructure would be required to comply with all applicable provisions of the City of Santa Maria Municipal Code, as well as relevant building and engineering standards. Potential environmental impacts of developing new connections to storm drains would be evaluated as necessary as part of the City's review of individual development applications.

Development facilitated by the plan could introduce new impervious surfaces through the construction of paved areas which could increase stormwater discharge to existing stormwater drainage facilities; however, as described in Section 4.5, *Hydrology and Water Quality*, development would be required to comply with the provisions of California's Phase II MS4 Permit, Section 8-12A.08 of the City's Municipal Code, and RWQCB Central Coast Region Resolution No. R3-2013-0032, which are designed to control the volume and rate of stormwater runoff from new development and redevelopment projects. Existing regulations would ensure development facilitated by the plan would not result in substantial additional runoff, necessitating the expansion of stormwater infrastructure within the city. Stormwater infrastructure could be required to be upsized within the annexation area. As such, the potential environmental impacts of implementing new stormwater infrastructure would be evaluated as necessary as part of the City's review of individual development applications for consistency with applicable policies of the plan and City Municipal Code requirements. Additionally, the plan includes the following goals and policies related to stormwater facilities:

Goal PFS-3: Stormwater management. The stormwater management system mitigates flood risks, enhances water quality, and promotes environmental health.

> **Policy PFS-3.1: Conveyance of surface drainage.** Convey surface drainage safely through the use of retardation basins, storm drains, recharge basins, and other infrastructure.

Goal COS-4: Water resources. Sustainable watershed management protects the city's water quality and natural ecosystems.

> **Policy COS-4.1: Santa Maria River protection.** Protect and enhance the beneficial uses of the Santa Maria River to support essential community and environmental needs, including municipal and domestic water supply, agricultural supply, and groundwater recharge.
>
> **Policy COS-4.2: Stormwater management.** Improve local surface water and groundwater quality through strategic land use and zoning practices.

Goal S-3: Flood and dam inundation. Impacts from flood and dam inundation to people and property are minimized.

> **Policy S-3.1: Santa Maria River Levee development buffer.** Require new development and sites undergoing redevelopment to provide a non-development buffer of 60 feet, measured from the toe of the Santa Maria River Levee, to provide access to the Santa Maria River levee for maintenance and repairs.
>
> **Policy S-3.3**: **Low-impact design.** Require new development and redevelopment projects to incorporate low -impact design measures for stormwater management, such as bioswales, permeable pavement, and onsite detention ponds.
>
> **Policy S-3.4: Stormwater drainage system.** Maintain and upgrade the City's stormwater drainage system to increase the system's capacity and reduce flooding.

Because new stormwater infrastructure would be evaluated as part of the City's review of individual development applications for consistency with applicable policies of the plan and City Municipal Code requirements, such that the potential environmental impacts of implementing new stormwater infrastructure would be evaluated as part of the City's review of individual development applications for consistency with applicable policies of the plan and City Municipal Code requirements, the plan would not result in the relocation or construction of stormwater facilities that would reasonably be expected to result in significant environmental impacts . Potential environmental impacts of additional stormwater infrastructure would also undergo individual environmental review at the time a project is proposed. This impact would be less than significant.

Natural Gas, Electricity, and Telecommunications

Connections to existing electrical and natural gas transmission and distribution systems in the city would be required to serve development facilitated by the plan. Development facilitated by the plan would occur on sites that are generally developed or surrounded by existing development served by existing natural gas and electrical infrastructure. Accordingly, development facilitated by the plan would generally have access to utility infrastructure and not require the installation of substantial electric or natural gas infrastructure to meet demands. However, increased density in the annexation area could require additional infrastructure and upgrades to existing infrastructure. These upgrades would be evaluated and provided in accordance with the rules and regulations of PG&E, SoCal Gas, and under the authority of the CPUC. Similar to electric and natural gas infrastructure, Santa Maria has existing telecommunications infrastructure for cable television, landline services, internet, and cellular phone service. Development facilitated by the plan would not require substantial telecommunications infrastructure to be constructed.

The potential environmental impacts of implementing new electric, natural gas, and telecommunications connections to development facilitated by the plan would be evaluated as part of the City's review of individual development applications for consistency with applicable policies of the plan and City Municipal Code requirements. Therefore, the plan would not result in the relocation or construction of natural gas, electricity, and telecommunications facilities that would reasonably be expected to result in significant environmental impacts . Potential environmental impacts of additional natural gas, electricity, and telecommunications infrastructure would also undergo individual environmental review at the time a project is proposed. This impact would be less than significant.

Mitigation Measure

No mitigation is required because these impacts would be less than significant.

Threshold 2:	Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Impact UTIL-2 THE OVERALL GROWTH ANTICIPATED BY THE 2045 GENERAL PLAN UPDATE WOULD GENERATE ADDITIONAL WATER DEMAND IN SANTA MARIA THAT COULD EXCEED PROJECTED WATER SUPPLIES DURING SOME MULTIPLE DRY-YEARS. WITH THE IMPLEMENTATION OF EXISTING POLICIES AND PROGRAMS, THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Development facilitated by the plan would increase the population of Santa Maria including within the annexation area, resulting in a corresponding increase in overall citywide water demand. As discussed in Chapter 2, *Project Description*, and Section 4.10, *Effects Found Not to be Significant,* development facilitated by the 2045 General Plan Update would result in an additional 16,140 net new residential units which corresponds to approximately 58,265 new residents. The City relies on a water demand factor of 118 gallons per capita per day, as stated in the City's 2020 UWMP, as a basis for projecting water demand in Santa Maria (City of Santa Maria 2020a). Accordingly, the addition of 58,265[5] residents would lead to a water demand of approximately 6,875,270 gallons per person per day, or 7,706.4 AFY[6].

Table 4.8-1 shows the City's anticipated water supply and demand through 2045. As shown therein, the City projects that water demand would be met by existing water supplies in all years except Year Five of a multi-year drought in 2025 and 2030 (City of Santa Maria 2020a). Furthermore, as shown in Table 4.8-1, the City anticipated surplus for Normal, Single-Dry, and the first four Multiple Dry-Years. The projected demand of the plan would be approximately 7,706.4 AFY, which is well within the projected demand and surplus of Normal, Single-Dry, and First, Second, and Fourth Multiple Dry-Years. Projected demand of the plan would not be met within 2040 and 2045 of Year Three of the Multiple Dry-Years scenario or during Year Five of the Multiple Dry-Years scenario. However, during these years, the City would implement its Water Shortage Contingency Plan that addresses stages of action to be undertaken by the City in response to water supply shortages, including more than a 50 percent reduction in water supply, and an outline of specific water supply conditions which are applicable to each stage. In addition to the stages of action, the City of Santa Maria is required to develop mandatory prohibitions against specific water use during shortages and consumption reduction methods in the most restrictive stages (City of Maria 2020a). Accordingly, the anticipated water consumption of the plan would be adequately met by the City's long-term water supply. Furthermore, individual projects would be reviewed by the Utilities Department at the time that they are proposed to ensure that adequate water supply would be available for an individual project.

In addition to the City's Water Shortage Contingency Plan, the City has adopted various policies and programs aimed at optimizing its available water resources, including groundwater, and implementing water conservation programs throughout its service area. This Santa Maria Municipal Code Chapter 12-44 implements California Model Water Efficient Landscape Ordinance to reduce

[5] This calculation represents a conservative analysis in which every potential residential unit (16,140 as described in Section 2.6.5, Proposed 2045 General Plan Buildout) is occupied at the full potential persons per household rate of 3.61 as determined by the California Department of Finance.
[6] 58,265 people * 118 gallons per person per day = 6,875,270 gallons per day / 892.1 gallons per day in 1 (acre feet) year

potable water usage on landscaping. Additionally, the City of Santa Maria's Recreation and Parks Department initiated a program which requires the City's irrigation system to be regularly upgraded by replacing antiquated lines, heads, and valves. Furthermore, development facilitated by the plan would be required to comply with Chapter 8-12 of the Santa Maria Municipal Code which includes guidelines on permissible water usage, particularly emphasizing restrictions during drought conditions to ensure sustainable water management. Additional water conservation requirements in times of drought are applicable to development in Santa Maria if the City Council declares a drought emergency and implements additional mandatory restrictions. These include, but are not limited to, posting notice of drought conditions in commercial establishments, prohibiting vehicle washing unless done at a commercial car washing facility, and allotment of water use quantity (rationing) if necessary. Additionally, the California Green Building Standards Code requires a 20 percent reduction in residential indoor water use that would lower potential water demand. The following goal and policies included in the plan would also assist to maintain water supply and encourage efficient water use:

Goal PFS-2: Water resources. High-quality drinking water supply meets existing and future water demands.

> **Policy PFS-2.1: Water system.** Maintain and expand the existing water system to meet the daily and peak demands of existing and future residents and businesses.
>
> **Policy PFS-2.2: Supply portfolio.** Improve the reliability of the water supply for current and projected demand by diversifying the City's water supply portfolio, including maintaining and increasing the City's groundwater wells, exploring additional sources of water supply, and supporting the State Water project.
>
> **Policy PFS-2-3: Groundwater.** Improve the long-term recharge of the Santa Maria Valley Groundwater Basin by retaining natural watershed areas, developing regional recharge basins, and minimizing impervious surfaces in new development.
>
> **Policy PFS-2.6~~7~~: Efficient water use.** Participate in and implement programs and measures that promote the efficient use of water

Future development facilitated by the plan would adhere to the water reduction policies and requirements described above. Furthermore, water suppliers are required to update their UWMPs every five years. As the current UWMP was prepared in 2020 and adopted by the City Council on June 15, 2021, the City is required to provide an update in 2025, which is anticipated to include the population projections as estimated by the plan. While water supply estimates are currently being updated as part of the City of Santa Maria's 2025 UWMP update, they were unavailable at the time of this EIR's publication. However, as described above, the water demand anticipated through buildout of the plan would be adequately met by the City's long-term water supplies as the City anticipated surplus for Normal, Single-Dry, and the first four Multiple Dry-Years. The projected demand of the plan would be approximately 7,706.4 AFY, which is well within the projected demand and surplus of Normal, Single-Dry, and First, Second, and Fourth Multiple Dry-Years. Therefore, the plan would have sufficient water supplies available to serve development facilitated by the plan and reasonably foreseeable future development during normal, dry, and multiple dry years. Impacts would be less than significant.

Mitigation Measure

No mitigation is required because impacts would be less than significant.

Threshold 4:	Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?
Threshold 5:	Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Impact UTIL-3 THE 2045 GENERAL PLAN UPDATE WOULD NOT GENERATE SOLID WASTE IN EXCESS OF STATE OR LOCAL STANDARDS OR IN EXCESS OF THE CAPACITY OF LOCAL INFRASTRUCTURE. NEW DEVELOPMENT FACILITATED BY THE PLAN WOULD BE REQUIRED TO COMPLY WITH APPLICABLE SOLID WASTE REDUCTION STATUTES AND REGULATIONS. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

Implementation of the plan would generate additional solid waste. Construction of future development would create construction debris, such as scrap lumber and flooring materials. Operation of future development would create typical household wastes associated with residential, office, and commercial uses. Future industrial development would also generate solid waste. As discussed in Chapter 2, *Project Description*, and Section 4.10, *Effects Found Not to be Significant,* development facilitated by the SMGPU would result in an additional 16,140 net new residential units. Based on CalRecycle's solid waste generation factor of 12.23 pounds household per day, the development facilitated by the plan would result in approximately 197,393 pounds of solid waste per day.[7]

As described in Section 4.9.1, *Setting*, the Santa Maria Regional Landfill has a maximum permitted daily throughput of 8,820 tons per week and a remaining capacity of approximately 2,845,000 cubic yards and is estimated to remain operational through 2034 (CalRecycle 2025a). Development facilitated by the plan would generate approximately 1,381,751 pounds of solid waste per week[8], or 691 tons per week. This would represent approximately 7.8 percent of the total weekly permitted throughput of the Santa Maria Regional Landfill. Additionally, the 2045 General Plan Update would generate roughly 934,129 cubic yards of solid waste annually[9], translating to approximately 32.8 percent of the remaining capacity of the Santa Maria Regional Landfill for the first year of the plan.

Should the Santa Maria Regional Landfill cease operations, solid waste generated by the city may be diverted to other nearby landfills, such as the Cold Canyon Landfill. The Cold Canyon Landfill has a maximum permitted daily throughput of 1,650 tons per day and a remaining capacity of approximately 13,000,000 cubic yards and is estimated to remain operational through 2040 (CalRecycle 2025c). Solid waste generated by development facilitated by the plan would represent approximately 6 percent of the weekly throughput for the Cold Canyon Landfill.[10] So, while it is anticipated that implementation of the plan would increase solid waste generation, the remaining capacity of the Santa Maria Regional Landfill and other nearby landfills, such as the Cold Canyon Landfill, are anticipated to be able to accommodate this increase in solid waste generation.

AB 939 requires the City to divert 50 percent of solid waste from landfills, and SB 1383 would require the City to reduce organic waste disposal by 75 percent by 2025. New development would be required to comply with Chapter 8-21 of the Santa Maria Municipal Code, which includes requirements for mandatory municipal solid waste, recycling, and composting material disposal reductions, as well as compliance with the California Green Building Standards Code requirements

[7] 197,393 pounds/day = 16,140 units * 12.23 pounds/household/day
[8] 1,381,751 pounds/week = 197,393 pounds/day * 7 days
[9] 934,129 cubic yards/year = [(691 tons/day * 365 days) * 0.037037037 yd^3] * 100
[10] 11,550 tons/week =1,650 tons/day * 7 days; 6 percent = [691 tons/week/11,550 tons/week]*100

for diverting construction and demolition debris. Furthermore, the proposed 2045 General Plan Update includes the following policy to reduce solid waste generation:

> **Policy PFS-9.2: Waste reduction through design.** Promote sustainable building practices that reduce waste generation by encouraging developers to incorporate materials reuse, waste reduction, and recycling into their designs.

For the reasons described above, the plan would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals, and would comply with federal, state, and local management and reduction statutes and regulations related to solid waste. Impacts would be less than significant.

Mitigation Measure

No mitigation is required because impacts would be less than significant.

4.8.4 Cumulative Impacts

A project's environmental impacts are "cumulatively considerable" if the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines Section 15065[a][3]). Regional cumulative impacts consider the City-wide impacts together with similar impacts of reasonably anticipated regional projects/programs. The general approach to cumulative impact analysis used in this EIR, as well as the determination of the cumulative impact analysis area, is discussed in Section 3, *Environmental Setting,* Subsection 3.3, *Cumulative Development*. By its nature, a general plan considers cumulative impacts insofar as it considers cumulative development that could occur within the City Limits and the annexation area.

Cumulative growth would increase the demand for water in Santa Maria. Based on the analysis in Impact UTIL-2, the City's long-term water supplies would be able to meet the demands of cumulative development in Santa Maria with an anticipated surplus for Normal, Single-Dry, and the first four Multiple Dry-Years. The projected demand of the plan would be approximately 7,706.4 AFY, which is well within the projected demand and surplus of Normal, Single-Dry, and First, Second, and Fourth Multiple Dry-Years. In addition, applications for new development projects would be reviewed by the City's Utilities Department at the time that they are proposed to ensure that adequate water supply would be available. If necessary, the City is able to implement mandatory prohibitions against specific water use during shortages and consumption reduction methods in the most restrictive stages. Accordingly, cumulative development would be adequately served by the City's long-term water supplies. Therefore, cumulative impacts to water would be less than significant.

Cumulative growth in Santa Maria would increase wastewater generation and demand on the treatment plant. As discussed in Impact UTIL-1, at full buildout, development facilitated by the plan is anticipated to result in 11.4 MGD, leaving a remaining average annual flow treatment capacity of 2.1 MGD. The City of Santa Maria anticipates and plans for future development through the plan, which is then utilized by the City to assess wastewater generation and infrastructure demand within the Sewer System Management Plan and Utilities Capacity Study. Within the City's Utilities Capacity Study and within the City of Santa Maria's Capital Projects, both identify treatment plant treatment facility upgrades needed to accommodate growth in the service area and maintain compliance with applicable regulatory standards for wastewater treatment and discharge. Planned Capital Improvement Projects identified by the city would also be implemented to further accommodate

growth facilitated by the 2045 General Plan Update. Accordingly, with these planned upgrades, it is determined that capacity would exist to service the demand for wastewater treatment facilities. Therefore, cumulative wastewater impacts would be less than significant.

The City maintains an extensive stormwater drainage system permitted by the Phase II MS4 permit. Cumulative development would introduce incremental increases in needs for stormwater conveyance; however, due to the existing built-out nature of Santa Maria, new residential development within city limits is not anticipated to introduce substantial new areas of impervious surfaces such that expansion of existing stormwater conveyance infrastructure would be necessary. Development facilitated by the plan within the annexation area currently lacks stormwater infrastructure. However, future development within these areas would be required to comply with all applicable provisions of the City of Santa Maria Municipal Code, as well as relevant building and engineering standards. Implementation of minor additions to stormwater conveyance infrastructure are reviewed by the City on a project-by-project basis in order to ensure consistency with the MS4 permit, Title 14, Chapter 3 of the City's Municipal Code, and RWQCB Central Coast Region Resolution No. R3-2013-0032. Therefore, cumulative stormwater infrastructure impacts would be less than significant.

Telecommunications services in the cumulative impact analysis area are provided by private vendors, and telecommunications facilities are available throughout the cumulative impact analysis area. Connections for new telecommunications services are implemented on an as-needed basis, in accordance with applicable local, State, and federal regulations. Due to the developed nature of the cumulative impact analysis area, there are no anticipated limitations to the availability of telecommunications services that would require the development of substantial telecommunications infrastructure. Similar to telecommunications, electric and natural gas distribution systems provided by PG&E, 3CE, and SoCalGas, respectively, are available throughout the cumulative impact analysis area. Cumulative development would be required to adhere to energy efficiency standards established in Title 24 of the CCR, the California Energy Code, and applicable local building ordinances. Adherence to these requirements would further reduce the need for new electrical or natural gas infrastructure to accommodate cumulative demand. Therefore, cumulative impacts concerning telecommunications, electric, and natural gas infrastructure would be less than significant.

Cumulative growth would increase solid waste generation and increase the demand for landfill disposal, which could result in a potential cumulative impact on waste disposal services and facilities in the region. As discussed under Impact UTIL-2, beyond 2034, solid waste generated by the city may be diverted to other nearby landfills, such as the Cold Canyon Landfill. The Cold Canyon Landfill has a maximum permitted daily throughput of 1,650 tons per day and a remaining capacity of approximately 13,000,000 cubic yards and is estimated to remain operational through 2040 (CalRecycle 2025c). Solid waste generated by development facilitated by the plan would represent approximately 6 percent of the weekly throughput for the Cold Canyon Landfill.[11] So, while it is anticipated that implementation of the plan would increase solid waste generation, the remaining capacity of the Santa Maria Regional Landfill and other nearby landfills, such as the Cold Canyon Landfill, are anticipated to be able to accommodate this increase in solid waste generation. This would not substantially increase daily or annual waste disposal, or result in an exceedance of capacity at the Santa Maria Regional Landfill. Therefore, the plan would not result in a considerable contribution to cumulative impacts to waste disposal services and facilities in the region.

[11] 11,550 tons/week =1,650 tons/day * 7 days; 6 percent = [691 tons/week/11,550 tons/week]*100

4.9 Effects Found Not to be Significant

Section 15128 of the California Environmental Quality Act (CEQA) Guidelines requires that an Environmental Impact Report (EIR) briefly describe any possible effects that were determined not to be significant. This section discusses why impacts to these environmental topics were determined to have a less than significant impact or no impact and therefore are not discussed in detail in the EIR as individual sections.

4.9.1 Aesthetics

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project would have a significant impact on aesthetics if it would:

1. Have a substantial adverse effect on a scenic vista;
2. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;
3. In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality; or
4. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

Impact Analysis

The Santa Maria General Plan does not identify scenic vistas or public viewing areas within city limits. However, the city contains views of natural aesthetic features including the Santa Maria River to the west of the city and rolling hills to the east. Title 12 of the City's Zoning Ordinance includes development standards which regulate the size, mass, and design of development projects to ensure the city maintains an overall cohesive character. Additional standards and guidelines exist for the treatment of historical structures and settings. Because development facilitated by the 2045 General Plan Update would be subject to Zoning Ordinance standards that regulate size, mass, and design, public views of significant visual resources would not be substantially blocked.

Pursuant to Section 15387 of the CEQA Guidelines, the City of Santa Maria is classified as an Urbanized Area. As stated above, the City's Zoning Ordinance standards protect the visual character of the city by regulating the size, mass, and design of development projects. New development facilitated by the plan would be subject to these standards. The City has implemented land uses in specific designated areas to provide visual compatibility with surrounding development.

The City has regulations for exterior lighting for commercial development, mixed-use development, Objective Design Standards for residential development, as well as specific standards for parking lots, signs, and for development within Airport Safety Zones (Chapters 12-33, 12-49, 12-32, 12-34, 12-21 and 12-24 of the Zoning Ordinance). Development facilitated by the plan would generate additional exterior lighting. Additional lighting generated by the development facilitated by the plan would be required to comply with lighting standards as set forth in Chapters 12-33, 12-49, 12-32,

12-34, 12-21 and 12-24 of the Zoning Ordinance and as such, lighting would be reduced to be consistent with existing lighting standards and impacts would be less than significant.

While the Santa Maria General Plan does not identify designated scenic vistas or public viewing areas within city limits, the city contains natural visual features such as the Santa Maria River and the rolling hills that offer aesthetic value to the city. The City would implement the following policies within the proposed Recreation Element to preserve scenic areas within the city:

> **Policy REC-8.1: Protection of open space.** Preserve and expand open spaces in public parks that provide ecological and scenic benefits for residents.

Development facilitated by the plan would be subject to existing Zoning Ordinance standards that regulate size, mass, design, and lighting, thereby preserving the city's visual character and ensuring compatibility with surrounding development. Additional protections for Open Space Zones and historic settings would further ensure that scenic and aesthetic resources are not adversely affected. Therefore, potential impacts to aesthetic resources would be less than significant.

4.9.2 Energy

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on energy if it would:

1. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or
2. Conflict with or obstruct a State or local plan for renewable energy or energy efficiency.

Impact Analysis

Construction Impacts

Development facilitated by the 2045 General Plan Update would involve construction activities that would consume fuel (e.g., gasoline and diesel fuel) to operate heavy equipment, light-duty vehicles, machinery, and generators for lighting. In addition, temporary grid power would also be required to support construction trailers or electric construction equipment. Energy consumption during the construction of individual projects would be temporary in nature, and equipment used would be typical of construction projects in the region. In addition, construction contractors are required to demonstrate compliance with applicable California Air Resources Board regulations that restrict the idling of heavy-duty diesel motor vehicles and govern the accelerated retrofitting, repowering, or replacement of heavy-duty diesel on- and off-road equipment. Furthermore, in accordance with Executive Order N-79-20 it is anticipated construction trucks would transition most of their vehicle fleets to zero-emission vehicles by 2035. Construction activities would be required to utilize fuel-efficient equipment consistent with State and federal regulations and would comply with State measures to reduce inefficient, wasteful, or unnecessary consumption of energy.

Operational Impacts

The City of Santa Maria is currently enrolled in the Central Coast Community Energy Program (3CE) which strives to source clean and renewable electricity at responsible rates for customers along the central coast of California within the 3CE service area which includes the counties of Santa Cruz, San

Benito, Monterey, San Luis Obispo, and Santa Barbara. Since 2018, 3CE has enrolled 33 Central Coast communities and serves more than 1.1 million customers, representing 95 percent of the households and businesses in the central coast region. Although they have a variety of sources, the majority of their energy is produced via solar and wind. 3CE's standard rate sources 30 percent of energy from renewable sources and 70 percent from unspecified power sources.[1] 3CE also offers a prime rate which sources 100 percent of energy from renewable sources.

Development facilitated by the plan would be required to comply with Chapter 9 of the City's Code of Ordinances, which adopts the State's energy efficiency regulations, including the California Energy Code and the California Green Building Standards Code—Part 11, Title 24, California Code of Regulations, to ensure development in Santa Maria promotes the State's energy efficiency goals through project design. Development facilitated by the plan would be required to comply with policies outlined in the Conservation and Open Space Element that aim to increase community awareness and participation in energy efficiency improvements, reduce household energy demand, lower greenhouse gas emissions, and advance regional sustainability goals. These include:

> **Policy COS-6.4: Energy conservation programs.** Promote energy conservation through public awareness programs.
>
> > **Action COS-6.4.1:** Coordinate with the Tri-County Regional Energy Network (3C-REN) to increase awareness of local incentives for improving energy efficiency for homeowners.
> >
> > **Action COS-6.4.2:** Identify and pursue funding to create a program offering home energy audits to help property owners identify updates to increase energy efficiency and funding assistance for home retrofits.
>
> **Policy PFS-6.4: Energy efficiency.** To reduce operating and maintenance costs, identify opportunities for environmental performance improvements (e.g., rooftop solar, equipment replacements, audits, retro-commissioning, and building retrofits) to City-owned buildings.

Implementation of these plan policies would further promote the State's energy efficiency goals by promoting alternative transportation, the use of energy efficient equipment, and energy retrofits. As development facilitated by the plan would receive electricity from 3CE, it would be powered by renewable energy mandated by Senate Bill 100. Implementation of the plan would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Furthermore, adherence to the State's energy efficiency regulations, including the California Energy Code and California Green Building Standards Code, as well as policies within the plan would ensure the plan would not result in the wasteful, inefficient, or unnecessary consumption of energy resources. Therefore, these impacts would be less than significant.

4.9.3 Geology and Soils

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on geology and soils if it would:

[1] Unspecified power is electricity that has been purchased through open market transactions and is not traceable to a specific generation source.

1. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
    i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault;
    ii. Strong seismic ground shaking;
    iii. Seismic-related ground failure, including liquefaction;
    iv. Landslides;
2. Result in substantial soil erosion or the loss of topsoil;
3. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potential result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse;
4. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property;
5. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water;
6. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

Impact Analysis

Earthquake Fault Rupture

According to the plan , several active faults exist within the region. These faults generally trend northwest. Active faults include the Santa Maria, San Luis Range (South Margin), Bradley Canyon, and Casmalia Faults. These faults are not delineated on California Department of Conservation Seismic Hazards Program information as being located within an Alquist-Priolo Earthquake Fault Zone (California Department of Conservation 2024).

Development facilitated by the 2045 General Plan Update could occur in areas with the potential for fault rupture and associated risk of loss, injury and death. Implementation of the proposed plan would facilitate residential development in Santa Maria. While additional residents, employees, and new structures would be exposed to the effects of existing seismic hazards, including fault rupture, seismic ground shaking, liquefaction, landslides, lateral spreading, subsidence, and collapse from local and regional earthquakes, the plan itself would not exacerbate the risk of seismic hazards occurring. The plan would encourage new development and redevelopment of existing underutilized land uses, which could replace older buildings subject to seismic damage with newer structures built to current seismic standards that would better withstand the adverse effects of strong ground shaking. The California Building Code (CBC) regulates the design and construction of excavations, foundations, building frames, retaining walls, and other building elements to mitigate the effects of seismic shaking. Foundations and other structural support features would be required to be designed to resist or absorb damaging forces from strong ground shaking and liquefaction.

As such, development facilitated by the plan would not directly or indirectly cause or increase potential substantial adverse effects involving the rupture of a known earthquake fault. This impact would be less than significant.

Seismic Ground Shaking

The Santa Maria Fault, San Luis Range (South Margin), Bradley Canyon, and Casmalia Fault could potentially produce seismic ground shaking within the city in the event of an earthquake(Safety Element of the 2045 Santa Maria General Plan Figure SE-2). Development facilitated by the plan may be subject to ground shaking in the event of an earthquake originating along one of the faults designated as active in the vicinity of the city.

Development facilitated by the plan would not exacerbate a risk to public safety or destruction of property beyond what is already present in the region. Residential development would be required to adhere to the standards of the CBC which provides earthquake design requirements, including earthquake loading specifications for design and construction to resist effects of earthquake motions in accordance with the American Society of Civil Engineers Standard 7-05. The CBC also regulates the design and construction of excavations, foundations, building frames, retaining walls, and other building elements to mitigate the effects of seismic shaking. The impact to people, buildings, or structures from strong seismic ground shaking would be reduced by mandatory conformance with applicable building codes, and accepted engineering practices. In addition, the plan includes policies intended to reduce impacts by promoting safe design and construction practices for new development, encouraging enhanced safety standards in high-risk seismic and geologic areas, and supporting public outreach to raise awareness of local hazards and appropriate protective actions. These include:

Policy S-1.1: Mitigate seismic and geologic hazards. Ensure new development is designed and constructed to adequately mitigate seismic and geologic hazards through compliance with the City's Municipal Code ~~safety and development regulations~~.

Action S-1.1.1: Update the Municipal Code as new versions of the California Building Code are published, and review and adopt seismic safety standards as needed to reflect current, updated information on seismic hazards in relation to the city.

Action S-1.1.2: Review and update seismic and geologic hazard assessments and policies within the Safety Element and Local Hazard Mitigation Plan (LHMP) as new data becomes available.

Action S-1.1.3: Utilize the land use review processes to identify seismic and geologic hazard risk associated with proposed development and condition projects to mitigate risk to an acceptable level (acceptable level shall be consistent with the current California Building Code).

Action S-1.1.4: Enforce the Unreinforced Masonry Ordinance to require the rehabilitation of identified unreinforced masonry buildings in accordance with the "adopted by" dates outlined in the ordinance.

Policy S-1.2: Seismic and geologic safety standards. Establish enhanced seismic and geologic safety standards to be applicable to development in high-risk seismic and geologic hazard zones.

Action S-1.2.1: Update the Municipal Code to require development projects in high seismic and geologic risk areas conduct a geotechnical investigation and analysis by a state-licensed engineering geologist or civil engineer, with the resulting report to be included as a part of the land use and/or subdivision permit application. The geotechnical investigation report shall assess hazard risk and identify appropriate mitigation measures to reduce identified risks to an acceptable level.

Action S-1.2.2: Update the Municipal Code to prohibit the redevelopment of sites where habitable structures are significantly damaged or destroyed by a geologic hazard event, unless findings can be made by a state-licensed geologist that the proposed redevelopment would adequately mitigate future geologic hazard risks.

Policy S-1.3: Public information on seismic hazards. Inform the public of existing seismic and geologic hazards through community engagement efforts, along with actions they can take to protect themselves and their property from these hazards.

Action S-1.3.1: Publish a guide that outlines the permitting process for retrofitting older structures that do not adhere to current seismic and geologic building standards.

Therefore, impacts would be less than significant.

Liquefaction

Liquefaction is a phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subjected to high-intensity ground shaking. Liquefaction occurs when three general conditions exist: shallow groundwater; low density, fine, clean sandy soils; and strong ground motion. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

According to the Safety Element of the City's proposed General Plan, liquefaction potential from ground shaking is generally low in Santa Maria due to the relatively deep groundwater levels. However, several areas of perched groundwater are listed in the Safety Element of the 2045 Santa Maria General Plan (Figure SE-1), resulting in potential liquefaction during an earthquake. Development facilitated by the plan would be required to adhere to the standards of the CBC, which includes mandatory site-specific geotechnical investigations for an individual project. Compliance with applicable building codes would reduce seismic ground shaking impacts with current engineering practices, and the plan would not exacerbate liquefaction potential in the Planning Area. The following plan policies would minimize impacts from liquefaction:

Policy S-6.4~~-~~5: Resilient critical facilities. Create resilient critical facilities that minimize the exposure of people and property from disasters.

Action S-6.45.1: Update the Municipal Code to require the siting of new critical public facilities outside of high hazard risk areas, including the 100-year flood zone, wildland urban interface zone, and areas with high liquefaction potential, unless the facilities can be designed in such a way that the risk can be mitigated to an acceptable level.

Action S-6.45.2: Identify existing critical facilities in high-risk hazard zones that require relocation or retrofits. Create a ranked list of critical facilities requiring relocation and/or retrofits based on the degree of hazard risk and the magnitude of adverse impacts to the community in the event the functionality of the facility is reduced or interrupted.

Compliance with the CBC and the proposed policy and actions in the plan would ensure that impacts related to liquefaction would be less than significant.

Landslides

The geologic character of an area determines its potential for landslides. Steep slopes, the extent of erosion, and the rock composition of a hillside all contribute to the potential for slope failure and

landslide events. In order to fail, unstable slopes need to be disturbed; common triggering mechanisms of slope failure include undercutting slopes by erosion or grading, saturation of marginally stable slopes by rainfall or irrigation; and, shaking of marginally stable slopes during earthquakes. Landslides and mudslides could potentially occur in areas with steep slopes or in areas containing escarpments. The only potential area subject to landslide risk within the city limits is the escarpment that runs in an east-west direction in the southern portion of the city. There is no proposed development or land use changes that would occur within this area.

Development facilitated by the plan would be required to adhere to the standards of the CBC, which includes mandatory site-specific geotechnical investigations for individual projects. If development facilitated by the plan were to occur in a location subject to landslide risk, it would be subject to further study and approval. Compliance with the City of Santa Maria's Code of Ordinances and policies in the plan would ensure that impacts related to landslides would be less than significant.

Erosion

Soil erosion or the loss of topsoil may occur when soils are disturbed but not secured or restored, such that wind or rain events mobilize disturbed soils, resulting in their transport offsite. Ground disturbing activities associated with development facilitated by the plan would have the potential to result in the removal and erosion of topsoil during grading and excavation. Construction activities that disturb one or more acres of land are subject to a General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities, Order No. 2022-0057-DWQ, NPDES No. CAS000002 (Construction Stormwater General Permit), which would require the development of a Stormwater Pollution Prevention Plan (SWPPP) that outlines project-specific Best Management Practices (BMPs) to control erosion, sediment release, and otherwise reduce the potential for discharge of pollutants from construction into stormwater. Typical BMPs include, but are not limited to, installation of silt fences, erosion control blankets, and anti-tracking pads at site exits to prevent off-site transport of soil material. Chapter 9 of the City's Code of Ordinances includes methods of reducing flood loss as well as requirements for preventing, controlling and reducing storm water pollutants.

Construction activities would also be required to comply with CBC Chapter 70 standards, which are designed to ensure implementation of appropriate measures during grading and construction to control erosion and storm water pollution. Therefore, erosion from ground-disturbing activities associated with future development facilitated by the plan would be controlled through implementation of the requirements and BMPs in existing regulations, including the Construction Stormwater General Permit and Chapters 8, 9 and 11 of the City's Code of Ordinances. These Chapters include regulations for reducing and avoiding potential run-off and restricting certain uses that may prove hazardous to health, safety and property due erosion hazards. Compliance with the regulations discussed above would reduce the risk of soil erosion from construction activities to a less than significant level.

Geologic or Soil Instability and Expansive Soils

Impacts related to landslides and liquefaction are discussed above; therefore, this discussion focuses on impacts related to unstable or expansive soils because of lateral spreading, subsidence, or collapse. Lateral spreading occurs because of liquefaction; accordingly, liquefaction-prone areas would also be susceptible to lateral spreading. Subsidence occurs at great depths below the surface when subsurface pressure is reduced by the withdrawal of fluids (e.g., groundwater, natural gas, or oil) resulting in sinking of the ground. Soils that volumetrically increase (swell) or expand when

exposed to water and contract when dry (shrink) are considered expansive soils. The soil's potential to shrink and swell depends on the amount and types of clay in the soil. Highly expansive soils can cause structural damage to foundations and roads without proper structural engineering and are generally less suitable or desirable for development than non-expansive soils.

Areas of expansive soils are known to exist within city limits; however, the majority of Santa Maria is considered unlikely to contain expansive soils (Safety Element of the 2045 Santa Maria General Plan Figure SE-3). Future development would be required to comply with the CBC's minimum standards for structural design and site development. The CBC provides standards for excavation, grading, and earthwork construction; fills and embankments; expansive soils; foundation investigations; and liquefaction potential and soils strength loss. Thus, CBC-required incorporation of soil treatment programs (replacement, grouting, compaction, drainage control, etc.) in the excavation and construction plans of future development facilitated by the plan could result in an acceptable degree of soil stability. Consistent with CBC requirements, development facilitated by the plan would require mandatory site-specific geotechnical investigations for individual development projects at the time they are proposed. Adherence to these requirements would achieve accepted safety standards for unstable geologic units or soils. In addition, although future development facilitated by the plan would potentially be subject to these hazards, the plan would not increase the potential for lateral spreading, subsidence, or collapse. Therefore, impacts would be less than significant.

Septic Systems

The plan would generally emphasize development within the city where existing infrastructure exists, apart from the annexation area. New development within the city is not anticipated to include the use of septic systems. Chapter 8 of the Municipal Code requires owners connect to available city sewer and abandon septic systems per health department requirements. The annexation area would provide the potential for more rural development that may require the use alternative wastewater systems; however, future development within the annexation area will be subject to the development and approval of a specific plan, one component of which would be a public and private infrastructure plan. Any request to rely on septic systems would be reviewed on a project-by-project basis and would need to comply with local and state regulations and standards for onsite wastewater treatment systems. Therefore, impacts related to the use of septic tanks or alternative wastewater disposal systems would be less than significant.

Paleontological Resources

Fossils or assemblages of fossils that are unique, rare, diagnostically important, or are common but have the potential to provide valuable scientific information for evaluating evolutionary patterns and geologic processes may be significant paleontological resources. New or unique specimens can provide new insights into evolutionary history; however, additional specimens of even well represented lineages can be equally important for studying evolutionary pattern and process and evolutionary rates. As such, common fossils, especially vertebrates, may be scientifically important.

Future development facilitated by the plan would be subject to Public Resources Code Section 5097.5 which prohibits the removal or disturbance of paleontological resources without permission of the jurisdictional agency. Based on required compliance with the Public Resources Code, the plan would not disturb unique paleontological resources. As a result, potential impacts to paleontological resources would be less than significant.

4.9.4 Hazards and Hazardous Materials

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on hazards and hazardous materials if it would:

1. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
2. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
3. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
4. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment;
5. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area;
6. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or
7. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires.

Impact Analysis

Hazardous Materials Transport, Use, and Disposal

Development facilitated by the 2045 General Plan Update would involve the use of potentially hazardous materials, such as vehicle fuels and fluids, which could be released, should a spill or leak occur. Contractors of individual development projects would be required to implement standard construction BMPs for the use or handling of such materials to avoid or reduce the potential for such conditions to occur. Storage and disposal of hazardous wastes is primarily regulated by the Santa Barbara County Environmental Health Services which acts as the Certified Unified Program Agency (CUPA)[2] as certified by the California Environmental Protection Agency (County of Santa Barbara Public Health 2025). The transport, use, or disposal of hazardous materials would be carried out in accordance with applicable local, State, and federal regulations regarding the handling of potentially hazardous materials. These include the Hazardous Materials Transportation Act, Resource Conservation and Recovery Act, the California Hazardous Materials Management Act, and California Code of Regulations Title 22. Hazardous materials transported on State highways would be subject to California Department of Transportation (Caltrans) requirements, as described in Title 49 of the Code of Federal Regulations. Additionally, Chapter 7-13 of the City's Code of Ordinances regulates the transport of hazardous materials within city limits. This chapter identifies specific roads and highways where vehicle transport of hazardous waste for which registration is required

[2] The CUPA regulates businesses that handle hazardous materials, generate or treat hazardous waste or operate aboveground or underground storage tanks. The primary goal of the CUPA Program is to protect public health and the environment by promoting compliance with applicable laws and regulations.

pursuant to Section 25163 of the Health and Safety Code is not permitted. Mandatory compliance with applicable local, State, and federal laws and regulations relating to the transport, use, and disposal of hazardous materials during construction and operation of future development facilitated by the plan would minimize the potential to create a significant hazard to the public or the environment through the routine transport, use, and disposal of hazardous materials. Therefore, this impact would be less than significant.

Upset and Accident Conditions

As described above in the *Hazardous Materials Transport, Use, and Disposal* subsection, the transport, use, and disposal of hazardous material would be conducted in accordance with applicable laws and regulations, including the City's Code of Ordinances Hazardous Materials Transportation Act, Resource Conservation and Recovery Act, the California Hazardous Materials Management Act, California Code of Regulations Title 22, and Title 49 of the Code of Federal Regulations.

Future development facilitated by the plan that would require demolition or redevelopment of existing structures, particularly old structures, has the potential to expose workers and the public to asbestos. The California Health and Safety Code Section 19827.5 requires local agencies not issue a demolition or alteration permits until an applicant has assessed the potential for a structure to contain asbestos and demonstrated compliance with notification requirements under federal regulations involving hazardous air pollutants, including asbestos. California Code of Regulations Section 1532.1 requires testing, monitoring, containment, and disposal of lead-based materials, such that exposure levels do not exceed California Occupational Safety and Health Administration (CalOSHA) standards.

Future development facilitated by the plan could involve the use, storage, disposal, or transportation of hazardous materials. Hazardous material use and storage would primarily consist of common household hazardous materials such as solvents, paints, and chemicals used for cleaning and building maintenance, and landscaping supplies. These materials would not be different from household hazardous materials currently in use throughout the city. Residents and workers are anticipated to use limited quantities of products that could contain hazardous materials routinely for periodic cleaning, repair, and maintenance, or for landscaping and pest control. The disposal of hazardous household materials would be conducted in compliance with applicable regulations, pursuant to the Santa Barbara County CUPA. The Santa Maria Sanitary Landfill currently operates a household hazardous waste transfer and storage facility. This facility is open to the public two days per month. In addition to collecting household hazardous waste, the facility conducts random, solid waste load checks for hazardous materials.

Future development facilitated by the plan could include industrial uses which could sell, use, store, transport, or release substantial quantities of hazardous materials. The Santa Barbara County CUPA establishes a Hazardous Materials Business Plan (HMBP) Program which requires businesses handling, using, or storing reportable amounts of hazardous materials to submit inventories, site maps, and other documentation relating to those materials to the CUPA, and to develop appropriate employee training and emergency procedures. After the HMBP is submitted to the CUPA, it would be reviewed for completeness and accuracy and would then be available to emergency first response agencies (County of Santa Barbara Public Health 2025). The Santa Maria Sanitary landfill does not service hazardous waste generated by commercial and industrial uses. Businesses must hire a hazardous waste transporter to dispose of their hazardous waste. This waste

is either transported to the Chemical Waste Management/Kettleman Hills facility (north), or to a transfer station in southern California, where it is shipped out of state.

Overall, applicable federal, State, and local regulations would minimize the potential for future development facilitated by the plan to create a significant hazard to the public or environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Therefore, this impact would be less than significant.

Schools

There are 23 schools within city limits, including elementary, junior high and high schools, and Allan Hancock College. As described above in the *Hazardous Materials Transport, Use, and Disposal* subsection, the transport of hazardous materials is required to comply with applicable regulations for the use, transport, and disposal of hazardous materials. Future development facilitated by the plan, which would be reasonably anticipated to emit hazardous air emissions or would handle a hazardous substance within 0.25-mile of an existing school would be required to notify the affected school district, pursuant to Public Resources Code Section 21151.4. Compliance with existing regulations would reduce the potential for a school to be exposed to hazardous materials.

The plan would facilitate residential, commercial, open space and industrial development in the vicinity of some existing schools. However, the various land uses facilitated by the plan would be required to comply with applicable laws and regulations for the handling of hazardous materials. These land uses would not emit large quantities of hazardous materials or substances. Development of sites within the city may have pre-existing contamination and would be remediated through coordination with the appropriate regulatory agency pursuant to federal, State, and local regulations.

Regarding future schools that may be developed to accommodate forecasted population increases in Santa Maria, provisions of the California Education Code Section 17213 would apply. Section 17213 requires the City to ensure the chosen site for a proposed school is not on a current hazardous waste disposal site, is not on a hazardous substance release site identified by the California Department of Toxic Substances Control (DTSC), and does not contain pipelines that carry hazardous substances. Therefore, the plan would not result in the handling of hazardous or acutely hazardous materials substances or waste within 0.25-mile of an existing or proposed school. This impact would be less than significant.

Hazardous Materials Sites

The DTSC's EnviroStor database and the State Water Resource Control Board's (SWRCB) GeoTracker database were reviewed to determine if hazardous materials sites exist within the Planning Area. Approximately 90 active hazardous material sites within city limits. These sites are primarily located in the southern half of the city with a slight concentration along Betteravia Road. Therefore, future development facilitated by the plan could occur on sites with underground storage tanks (USTs). Tank removal activities could pose both health and safety risks from tank contents or vapors to workers, tank handling personnel, and the public. Potential risks, if any, posed by USTs could be minimized by managing the tank according to existing standards contained in California Health and Safety Code Division 20, Chapters 6.7 and 6.75 (UST Program), as enforced and monitored by the City's Public Health Department. If contamination exceeds regulatory action levels, future developers would be required to undertake remediation procedures prior to grading and development under the supervision of the Regional Water Quality Control Board, depending on the nature of identified contamination. Furthermore, the plan would include the following policies

aimed to reduce environmental and public health risks by regulating oil-related land uses, promoting the safe handling and reduction of hazardous materials, and addressing potential exposures linked to solid waste site operations.:

Policy S-4.1: Crude oil extraction, production, and postproduction. Maintain and, as needed, update local land use regulations pertaining to crude oil extraction, production, and postproduction well site abandonment and closure.

Action S-4.1.1: Update the City's Petroleum Ordinance to maintain consistency with regulations and standards established by the California Geologic Energy Management Division (CalGEM) and Santa Barbara County Environmental Health Division pertaining to petroleum extraction, processing, storage, and transport.

Action S-4.1.2: Update the minimum no-build easement buffer surrounding abandoned and existing oil wells to be consistent with current CalGEM policies for unimpeded access to well heads.

Action S-4.1.3: Require responsible parties to remediate abandoned oil sumps and contaminated soils, and to plug and abandon (or re-abandon) oil wells in accordance with federal, state, and local regulations upon termination of the associated contaminating use or facility. For abandoned sites, these requirements must be met prior to any new site development.

Action S-4.1.4: Refer development applications for oil extraction, production, storage, or transport uses and sites to the City Petroleum Engineer, or to the County Petroleum Engineer Energy, Minerals and Compliance Division, if authorized by the City Council for review and approval. This includes sites with existing or former operations related to oil extraction, production, storage, or transport.

Action S-4.1.5: Update the Municipal Code to require new development and redevelopment projects on sites with existing or abandoned oil wells, or a history of oil drilling operations to conduct a Phase I Environmental Assessment.

Action S-4.1.6: Conduct an environmental assessment prior to the development of newly annexed areas~~ations~~ containing or in proximity to active and plugged oil and gas wells to identify potential public health concerns. Based on the findings of the environmental assessment, require site remediation or restrict development in areas near active, idle, and/or abandoned oil and gas wells that could expose people to contamination.

Policy S-4.2: Hazardous materials. Ensure the safe use, storage, transport, and disposal of hazardous materials.

Action S-4.2.1: Continue to enforce regulations of hazardous materials established by the Santa Barbara County Environmental Health Services Division and State Health and Safety Code.

Action S-4.2.2: Enforce and periodically review hazardous materials transport routes designated by the City and the California Highway Patrol to ensure routes limit exposure to existing sensitive land uses and critical facilities to the greatest extent feasible.

Action S-4.2.3: Maintain local hazardous materials disposal programs for businesses and residents to ensure safe disposal of hazardous materials.

Action S-4.2.4: Coordinate with the County of Santa Barbara Environmental Health Division and the California Highway Patrol to update and enforce local hazardous materials plans, programs, and transport routes.

~~**Action S-4.2.5:** Prior to issuance of a ministerial permit related to proposed railway facilities and related operations, require applicants submit written documentation that the Railroad Operations and Safety Branch (ROSB) of the California Public Utilities Commission (CPUC) has conducted review and inspection of the project, and found the project in compliance with all state and federal laws, regulations, orders, and directives relating to the handling and transportation of hazardous commodities.~~

Policy S-4.3: City hazardous materials usage. Reduce the use of hazardous materials in City operations.

Action S-4.3.1: Evaluate the feasibility of adopting procurement policies that prioritize the purchase of non-toxic and environmentally friendly products for City operations.

Action S-4.3.2: Maintain a list of pesticides and herbicides restricted for use on publicly owned land and implement integrated pest management practices and use of organic pesticides where feasible.

Policy S-4.4: Solid waste sites. Monitor and mitigate hazardous material exposure associated with solid waste site operations.

Action S-4.4.1: Update the Municipal Code to establish buffer zones surrounding solid waste sites to prohibit ~~by restricting~~ the placement of sensitive land uses adjacent to solid waste sites. Allowed uses in buffer zones may include green spaces ~~and parks~~.

~~**Action S-4.4.2:** Ensure all active and closed solid waste sites maintain gas collection systems to capture, manage, and potentially reuse methane for on-site and off-site use.~~

Future development facilitated by the plan would be required to identify and remove such hazardous materials in accordance with applicable State and local regulations. As a result, the plan would not create a significant hazard to the public or the environment due to being located on a hazardous materials site. This impact would be less than significant.

Airport Land Use Hazards

The Santa Maria Airport is located in the southwestern portion of the city. The Santa Maria Airport Land Use Compatibility Plan (ALUCP) (Santa Barbara County Association of Governments 2023) applies to development within the Santa Maria Airport's influence area. Future development facilitated by the plan could occur within the noise contours and/or the developable airport safety zones as delineated in the ALUCP. In accordance with California Public Utilities Code 21676 as well as Section 1.4.1, *General Plan Consistency*, of the Santa Maria ALUCP, Airport Land Use Committees (ALUC) must review general plans for consistency with the ALUCP.

The ALUC would review the plan for consistency with the Noise Compatibility Guidelines provided in the ALUCP, as well as height restrictions, land uses, densities and other specific development standards within the applicable airport safety zones. Additionally, specific future development that may affect navigable airspace would be subject to Federal Aviation Administration review, pursuant to the Code of Federal Regulations, Parts 77.5, 77.7, and 77.9.

In addition to review by the ALUC, the following plan policies would minimize loss of life, injury, and property damage resulting from aircraft operations. Specifically, plan policies include the following:

> **Policy S-5.1: Santa Maria Airport Land Use Compatibility Plan.** Maintain consistency between the City's General Plan and Municipal Code and the current Santa Maria Airport Land Use Compatibility Plan.
>
> > **Action S-5.1.1**: Review and update the City's Land Use Element, Safety Element, and Zoning Code upon the adoption of an updated Santa Maria Airport Land Use Compatibility Plan to ensure consistency.
>
> **Policy S-5.2: Airport Commission and District project review.** Ensure new development within the Santa Maria Airport Area of Influence is consistent with the standards, regulations, and processes set forth by Article 3.5 of the Public Utilities Code, as described in the Santa Maria Airport Land Use Compatibility Plan.
>
> > **Action S-5.2.1:** Refer all applications for General Plan Land Use amendments within the Santa Maria Airport Area of Influence to the Santa Barbara County Airport Land Use Commission and the Santa Maria Public Airport District for review, consistent with the processes of Article 3.5 of the California Public Utilities Code.

Compliance with the ALUCP, review by the ALUC, and implementation of plan policies would ensure the plan would not result in a safety hazard or excessive noise for people residing or working in the plan area. Therefore, this impact would be less than significant.

Impairment of Emergency Response Plans

Construction activities associated with future development facilitated by the plan could interfere with adopted emergency response or evacuation plans because of temporary construction activities within rights-of-way, temporary construction barricades, or other obstructions that could impede emergency access. Temporary construction barricades or other obstructions that could impede emergency access on State highway systems would be subject to the standards set forth in the California Manual of Uniform Traffic Control Devices. The Manual of Uniform Traffic Control Devices requires the creation and approval of temporary traffic control plans to be used for facilitating road users through a work zone (Caltrans 2014, revised 2025). Adherence to these requirements for construction activities would minimize potential impacts associated with the impairment or physical interference of an adopted emergency response plan or evacuation procedures for State highways. Construction that would occur within a public easement or right-of-way would be required to obtain an encroachment permit, which are issued by the City's Public Works Department. Public Works would review encroachment permit applications for compliance with local regulations to ensure construction activities would not impair emergency evacuation or emergency response plans.

Increased future development could result in additional traffic with the potential to hinder emergency response or evacuation routes. However, plan policies would support safe evacuation routes in the event of an emergency. Plan policies include the following:

> **Policy S-6.1: Emergency preparedness and response coordination.** Strengthen the City's emergency preparedness and response capabilities.
>
> > **Action S-6.1.1:** Maintain mutual aid agreements and establish shared resource networks within the Operational Area to provide additional emergency response capacity in the event of a large-scale disaster.

Action S-6.1.2: Participate in updates to the regional emergency, safety, and hazard plans, including the Santa Barbara County Multi-Jurisdictional Hazard Mitigation Plan and Santa Barbara Operational Area Emergency Management Plan.

Engage Operational Area partners and the whole Community in the City's emergency planning efforts to ensure a cohesive and coordinated response in the event of a large-scale disaster consistent with Incident Command System (ICS)/SEMS/NIMS.

Action S-6.1.3: Continue to work with other jurisdictions and regional agencies to develop a multi-jurisdictional emergency preparedness and response team to oversee and advise emergency planning efforts**Action S-6.1.4:** Partner with local organizations and regional agencies to offer a broader range of training and educational opportunities for emergency response personnel, City staff, and residents with the goal of sharing best practices and encouraging cross-collaboration. This can be accomplished by organizing joint training and cross-training sessions and emergency drills with other agencies, organizations, or jurisdictions.

Policy S-6.2: Police response time. Identify minimum standards for police response time and ensure compliance with these standards for all areas within the City limits.

Action S-6.2.1: Continually monitor and report average law enforcement response time.

Action S-6.2.2: On an annual basis, evaluate police resource needs to achieve target response times, and include desired resources as needed.

Policy S-6.3: Police emergency response capability~~city~~. Maintain ~~adequate law enforcement capabilities and emergency response capacity.~~ a ratio of 1.3 sworn officers for every 1,000 residents to ensure that the Santa Maria Police Department is sufficiently staffed and equipped to meet the community's safety needs.

Action S-6.3.1: Evaluate law enforcement capacity and emergency response needs as new land is annexed and developed within the Santa Maria Police Department jurisdiction.

Policy S-6.~~4~~ 5: Resilient critical facilities. Create resilient critical facilities that minimize the exposure of people and property from disasters.

Action S-6.45.1: Update the Municipal Code to require the siting of new critical public facilities outside of high hazard risk areas, including the 100-year flood zone, wildland urban interface zone, and areas with high liquefaction potential, unless the facilities can be designed in such a way that the risk can be mitigated to an acceptable level.

Action S-6.45.2: Identify existing critical facilities in high-risk hazard zones that require relocation or retrofits. Create a ranked list of critical facilities requiring relocation and/or retrofits based on the degree of hazard risk and the magnitude of adverse impacts to the community in the event the functionality of the facility is reduced or interrupted.

Action S-6.45.3: Develop, prioritize, and implement a list of capital improvement projects to mitigate hazard risk for critical facilities:

- Prioritize improvement projects based on feasibility and impact, with emphasis on improvements that benefit disadvantaged communities.
- Identify and pursue sources of funding to support critical facility improvement projects.

Action S-6.4~~5~~.4: Install backup energy systems, such as generators, renewable energy, and battery storage systems, for existing and new critical facilities to ensure continuity of operation in the event of a disaster or hazard event.

Action S-6.4~~5~~.5: Conduct annual fire safety inspections for public buildings and recreational and utility infrastructure.

Policy S-6.~~5~~6: Emergency response training. Prepare and train City staff to support emergency responders in the event of a disaster.

Action S-6.~~5~~6.1: Update the Emergency Response Plan to designate roles and responsibilities for City staff by department, including non-leadership support roles.

Action S-6.~~5~~6.2: Designate alternative operating locations for critical City staff in the event that the primary location is inaccessible or unusable during and after an emergency.

Policy S-6.~~6~~7: Emergency plans. Maintain and update local emergency preparedness and response plans to ensure consistency between state, regional, and local safety requirements and current best management practices.

Action S-6.~~6~~7.1: Upon adoption of an updated City or Regional Safety Element, Hazard Mitigation Plan, emergency response plan, or airport land use plan, review and update all other relevant City safety and emergency plans and regulations for consistency.

Action S-6.~~6~~7.2: When updating a local safety or emergency plan, update hazard identification and mapping to include the most current state-approved data sources.

Policy S-6.~~7~~8: Community emergency preparedness and response. Create opportunities for meaningful community involvement throughout all aspects of emergency preparedness and response planning.

Action S-6.~~7~~8.1: Implement a community outreach program with diverse engagement methodologies to educate and prepare residents for potential hazards and emergency events that include multiple forms of media, including social media and print media, as well as in-person and virtual events.

Action S-6.~~7~~8.2: Integrate noticing for community outreach opportunities into a variety of City communications, including the City's website, social media pages, and utility and property tax bills.

Action S-6.~~7~~8.3: Establish community partnerships to assist in engaging disadvantaged and underserved populations.

Action S-6.~~7~~8.4: Ensure all emergency preparedness and response materials and plans are provided in all languages spoken by at least five percent of the city's population.

Action S-6.~~7~~8.5: Work with the community and experts to identify and incorporate accessible communications technologies and processes to ensure protective actions are rapidly disseminated to and understood by affected populations.

Action S-6.~~7~~8.6: Develop an interactive online map of publicly accessible hazards information relevant to Santa Maria that allows residents and property owners to view the location of hazards relative to their own property or location of residence. Integrate links to

emergency preparedness and resiliency resources for residents, including assistance programs for home retrofits for reducing hazard risk.

Action S-6.~~7~~8.7: Create a dedicated webpage on the City's website that provides current information on hazard events, proactive measures residents can make to protect themselves and their property, and resources that can be utilized in the event of a disaster. Use translation software to provide this information in all languages spoken by at least five percent of the population.

Action S-6.~~7~~8.8: Incorporate clear feedback loops that demonstrate to the community how their input has influenced local planning and programs related to hazards and emergency preparedness, and response.

Policy S-6.~~8~~9: Emergency response communication. Develop clear, accessible, and reliable communication methods for the entire community to be used in the event of an emergency or disaster.

Action S-6.~~8~~9.1: Upon the next update of the Emergency Response Plan, include a strategy that outlines communication protocols during and after disasters. This plan should include methods for information sharing among emergency service providers and the public and identify plans for communicating with individuals who speak languages other than English and individuals with visual and auditory impairments.

Policy S-7.3: Evacuation Assistance. Provide evacuation assistance to vulnerable populations in the event of an emergency.

Action 5-7.3.1: Develop a plan for providing evacuation assistance for vulnerable individuals. The plan should include strategies for evacuation assistance, including the following:

- Opportunities for utilizing public transit to support individuals who may not be able to self-evacuate, including those without vehicles, with disabilities, commuters, etc.
- Early evacuation warnings for individuals who may require longer to evacuate, including individuals with large animals, medical needs, etc.
- Communication plan for informing non-English speaking and auditory and visually impaired individuals during an evacuation order

Action S-7.3.2: Promote a neighborhood buddy system, including through the City Community Emergency Response Team (CERT) program, that organizes groups of three to five households to check in, share information, and assist one another with emergency response and evacuation.

Action S-7.3.3: Identify public facilities that can be retrofitted to be used as emergency shelters/centers that comply with FEMA, DOJ, and/or ARC requirements. Partner with community organizations to formalize agreements to establish additional facilities that serve as emergency shelters/centers. Identify and plan for Temporary Evacuation Points (TEPs).

Policy S-7.4: Community evacuation education. Ensure the community is informed of evacuation routes and procedures.

Action S-7.4.1: Develop a City webpage that provides a consolidated source of information related to evacuation, including evacuation routes, evacuation assistance, location of evacuation centers, and evacuation orders and updates.

Action S-7.4.2: Develop targeted outreach programs that provide evacuation information and training to residents in high-risk hazard areas.

Action S-7.4.3: Collaborate with local service providers and community leaders to educate vulnerable populations on evacuation preparedness, including individuals experiencing homelessness, individuals who speak a language other than English, individuals with a disability, and those in disadvantaged communities.

Furthermore, development facilitated by the plan would be required to comply with the road standards within Appendix D of the 2022 California Fire Code, Title 24, Part 9, and be reviewed by the Santa Maria Fire Department to ensure development would not interfere with evacuation routes or impede the effectiveness of evacuation plans. Implementation of the plan would not introduce new features or policies that would preclude implementation of or alter these plans or procedures. Therefore, the plan would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. This impact would be less than significant.

4.9.5 Land Use and Planning

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on land use and planning if it would:

1. Physically divide an established community; or
2. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Impact Analysis

Approximately 32 percent of the city remains undeveloped. The undeveloped areas of the city are classified as vacant (19 percent) and agricultural (13 percent). As described in Chapter 2, *Project Description,* the 2045 General Plan Update would add 985 acres of land to the city limits and would provide the framework for development of up to 16,140 net new primary and accessory dwelling residential units, including the development of 1,300 accessory dwelling units (ADUs).

The plan would implement policies and land use designations that identify the type and intensity of uses permissible in the city. Intensity and density standards are established for each land use classification. The intent of the land use designations is to adequately classify and distinguish the various land uses needed within the city. The Land Use Element of the plan contains policies which are designed to guide growth toward infill and revitalization areas while requiring context-sensitive transitions and buffers between incompatible uses. By ~~focusing new development away from established neighborhoods and~~ ensuring compatibility between new development and existing facilities through thoughtful land use planning, the policies help prevent community division and reduce the potential for significant environmental impacts. These include:

Policy LU-1.1: Land use pattern. Implement the General Plan Land Use Map and corresponding Land Use Designations as described in Figure LU-4 and in Table LU-2 to continue efforts to create a complete community.

Action LU-1.1.1: Following adoption of the General Plan Update, prepare a comprehensive update of the City's Zoning Code and Zoning Map with districts that mirror the General Plan designations and allow flexibility in uses without the need for Planned Development Overlay districts.

Action LU-1.1.2: Implement the Santa Maria Objective Design Standards and recommended Design Review process that streamlines the existing process of reviewing applications for the development of vacant sites or site redevelopment.

Action LU-1.1.3: Amend the Area 9 Specific Plan to allow low-density residential uses along A Street, consistent with the LMDR designation.

Policy LU-1.2: Infill development. Prioritize the redevelopment of vacant or underutilized parcels with a focus on revitalizing ~~infill of existing residential, commercial, and industrial capacity to revitalize~~ Downtown and deteriorating neighborhoods, to the extent feasible. ~~Accommodate growth while making every effort to preserve agricultural lands and open space.~~

Action LU-1.2.1: Implement the City's adopted specific plans to the extent feasible.

Policy LU-1.3: Areas of change. Focus new development, infill, and higher density or intensity development along the city's primary corridors (Main Street and Broadway), within the Downtown, and in surrounding neighborhoods.

Policy LU-1.4: Neighborhood preservation. Support the revitalization and enhancement of older neighborhoods in the Downtown and surrounding areas by continuing to invest in infrastructure and streetscape upgrades.

Policy LU-1.5: Job/housing balance. Achieve a job-to-housing ratio of 1.2 that balances new housing development and job production in Santa Maria over the General Plan horizon.

Policy LU-13.1: Land use buffers. Require the use of buffers between incompatible land uses by using context-appropriate buffers such as berms, walls, landscaping, bike paths, and arterial streets, where appropriate and depending on neighboring use, to avoid adverse impacts to either use.

Action LU-13.1.1: Update the City's municipal code to protect sensitive land uses by, for example, requiring a buffer between sensitive uses and local sources of air pollution such as industrial and commercial facilities (e.g., warehouses, processing plants, factories, landfills, hazardous waste facilities). Developments should incorporate appropriate mitigation measures that reduce potential pollution exposure.

Policy LU-13.2: Residential encroachment. Protect residential neighborhoods and schools from encroachment by incompatible nonresidential uses such as light industrial, general industrial, and heavy commercial/manufacturing, and the impacts associated with adjacent nonresidential activities.

Policy LU-13.3: Land use transitions. Require land use transitions of lower intensity commercial or mixed-use on the perimeter of heavy uses when adjacent to residential uses.

Policy LU-13.4: Incompatible neighborhood uses. Prohibit the development of industrial or manufacturing uses within neighborhoods or directly adjacent to established residential neighborhoods or schools.

Policy LU-13.5: Industrial and residential buffers. Mitigate the impacts of industrial land that exists adjacent to residential uses by permitting only light industrial uses in those areas, along with requiring the industrial development to provide appropriate buffers so that the use does not negatively impact the residential development.

Policy LU-13.6: Incompatible uses. Prohibit new residential development, and those retail, commercial, office, and/or consumer-oriented businesses in close proximity to the Airport which the City determines would conflict with the Airport Master Plan and Santa Maria Airport Land Use Compatibility Plan (ALUCP), including through utilizing processes set forth by Article 3.5 of the Public Utilities Code.

Policy LU-13.7: Airport and residential buffers. Require transition zones and buffers between the Airport and new residential development in close proximity to the Airport, as defined by the ALUCP, to mitigate impacts of ongoing airport operations.

Policy LU-13.8: Development compatibility. Ensure that new development within the Santa Maria Airport Area of Influence is consistent with standards and regulations set forth by local and regional Airport Land Use Compatibility Plans.

Action LU-13.8.1: Review new development for consistency with the Santa Maria Airport Safety Zone Compatibility Criteria, Table 3-2, of the Santa Maria Airport Land Use Compatibility Plan, and with the regulations and processes set forth by Article 3.5 of the Public Utilities Code.

The plan would facilitate future development as envisioned by the City. The plan is an update to the City's General Plan and is intended to set forth guidance for orderly development in Santa Maria through the year 2045, in part, by establishing land uses throughout the city. As such, the plan itself is a land use plan, and therefore would not conflict with local land use plans, policies, or regulations. These include but are not limited to, the City's 16 Specific Plans and the Zoning Ordinance. The update would set forth goals and policies intended to reduce potential effects from individual development projects on the environment. There would be no impact.

4.9.6 Mineral Resources

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on mineral resources if it would:

1. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state; or
2. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

Impact Analysis

The city is identified as a production-consumption region by the Surface Mining and Reclamation Act(California Department of Conservation 2025). A production-consumption region is defined as a

region with naturally occurring concentrations of useful minerals in the Earth's crust that have the potential to be economically extracted. However, there are currently no mines or mineral extraction operations within the city and none are proposed. Based off the existing land uses within the city, development facilitated by the 2045 General Plan Update would not be conducive to resources extraction, only contemplating such activities within Open Space designated lands. Therefore, potential impacts to mineral resources would be less than significant.

4.9.7 Population and Housing

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on population and housing if it would:

1. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure; or
2. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

Impact Analysis

For reasonable analysis purposes in this EIR, the City assumes the 2045 General Plan Update's buildout (of both residential and non-residential uses) within the city would occur by 2045. In the context of this EIR, "buildout" of the plan is assumed to be a locally appropriate projection of development within the plan area based on updated land use designations and the proposed annexation rather than development of every parcel within the city. While complete buildout is not likely to occur by 2045, the buildout assumption used for this EIR represents the most conservative approach to evaluating the plan's potential environmental effects and satisfying the requirements of the CEQA Guidelines. Buildout of the city would be dependent on multiple factors, including local economic conditions, market demand, and other financing considerations. The buildout scenario for this EIR is estimated to be approximately 16,140 net new residential units by the year 2045 (see Chapter 2, *Project Description*). Additional development could take place in the annexed land to the east of the city's current limits. This area is currently used for agricultural activities but would be redesignated as Planned Annexation Area, which would allow a mix of industrial, residential, and commercial land uses (Santa Maria General Plan 2023). According to the California Department of Finance's population estimates, the average persons per household in Santa Maria was 3.61 in 2024 (DOF 2024). Assuming 3.61 persons per household, the 16,140 additional residential units could generate approximately 58,265 new residents.

However, the population growth associated with the plan would not be considered substantial unplanned growth. As a planning document, the plan would be a key tool to help the City plan and conduct growth. The plan includes goals and policies to accommodate the population growth anticipated by the plan would be supported by necessary public facilities and services, including:

> **Policy PFS-1.1: Resource and infrastructure capacities.** Maintain resource and infrastructure standards and capacities to meet the city's existing and future needs.
>
> **Policy PFS-1.2: Wastewater system.** Maintain a wastewater collection, treatment, and disposal system capable of meeting the daily and peak demand of existing and future city residents and businesses.

Policy PFS-2.1: Water system. Maintain and expand the existing water system to meet the daily and peak demands of existing and future city residents and businesses.

Policy PFS-2.2: Supply portfolio. Improve the reliability of the water supply for current and projected demand by diversifying the City's water supply portfolio, including maintaining and increasing the City's groundwater wells, exploring additional sources of water supply, and supporting the State Water project.

Policy PFS-2.3: Groundwater. Improve the long-term recharge of the Santa Maria Valley Groundwater Basin by retaining natural watershed areas, developing regional recharge basins, and minimizing impervious surfaces in new development.

Policy PFS-2.4: Regional coordination. Participate in regional coordination targeting aquifer recharge and sustainable groundwater supply.

Policy PFS-4.2: Infrastructure and municipal services. Ensure that annexed areas receive adequate infrastructure and municipal services, aligning with the City's overall growth plan.

Additionally, the State requires that all local governments adequately plan to meet the housing needs of their communities. Given that the State is currently in an ongoing housing crisis due to an insufficient housing supply, the additional residential units under the plan would further assist in addressing the existing crisis and meeting the housing needs of the City's communities. The City's Sixth Cycle Housing Element indicates 5,418 residential units must be built by 2031 to satisfy the state required Regional Housing Needs Allocation. In addition, subsequent Housing Element revisions would be made throughout the horizon of the 2045 General Plan Update in accordance with state law. These plans would facilitate development that could help the City reach its housing needs goal.

The plan would strive to accommodate projected population, residential, and jobs growth and focuses on improvements to existing neighborhoods along with infill and vacant site development. The plan would not include the displacement of individuals. The plan would include infill development and renovations to existing residential units to increase housing opportunities. Therefore, because the plan would be designed to accommodate for planned and orderly growth, as mandated by the State, development in accordance with the plan would not indirectly induce growth in the city. Impacts would be less than significant.

4.9.8 Public Services and Recreation

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on public services and recreation if it would:

1. Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other objectives for any of the public services:
    a. Fire protection
    b. Police protection
    c. Schools

d. Parks
e. Other public facilities

2. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or
3. Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

Impact Analysis

Future development facilitated by the plan would result in an increase in the city's population, which would result in an incremental increase in demand for fire protection, police protection, and other public services such as parks, recreational facilities, and libraries.

Fire Protection

Fire protection services in Santa Maria are provided by the Santa Maria Fire Department (SMFD). SMFD provides a wide range of programs, which include fire suppression, all risk emergency services, public education programs, fire prevention, and life safety measures. SMFD also administers a hazardous materials business plan program in cooperation with Santa Barbara County. There are six fire stations in the city (City of Santa Maria 2025a).

SMFD operates five stations that serve the entire community and Fire Station No. 6 only serves the Santa Maria Public Airport (City of Santa Maria n.d.). There are currently five frontline fire engines and one ladder truck in service for the Santa Maria Fire Department. In addition, the department has an aircraft rescue and firefighting vehicle at the airport station, an urban search and rescue vehicle, three reserve engines, and a Type-III brush engine. For purposes of responding to structure fires, there are four engines and a truck available, leaving one engine free to cover the city. The fire department is currently budgeted for a total of 63 suppression personnel, with a ratio of 0.59 firefighters per 1,000 residents. Daily minimum staffing is 20 department personnel, including the Aircraft Rescue and Firefighting Specialist and a Battalion Chief. The average response time of the Santa Maria Fire Department in 2019 was 4:06 minutes for all calls, and 5:32 minutes when considering only calls for structure fires (City of Santa Maria 2020a).

Development facilitated by the plan would be served by the Santa Maria Fire Department, which provides fire protection and emergency medical services throughout the city. As future buildout occurs, the City would evaluate fire service operations and deployment to ensure adequate coverage. New development would be required to comply with fire safety and access standards set by the California Building Code and administered by the City's Building Division. In accordance with standard procedures, Santa Maria Fire Department would review project plans before permit issuance to confirm code compliance and adequate emergency access. Development would also be subject to fire mitigation fees under Santa Maria Municipal Code (SMMC) Chapter 8-15. The plan includes Policies PFS-8.1 and PFS-8.2 which focus on ensuring fast and effective emergency response by maintaining a five-minute response time citywide, guiding facility siting based on service needs, and requiring thorough fire department review of development plans to uphold safety standards and emergency access. Given the anticipated growth, increased demand may necessitate additional fire staffing and potentially new facilities. Any future facilities would be located in compliance with building and zoning regulations and undergo CEQA review to assess site-specific environmental impacts. While the exact size and location of any future fire department facilities are not yet known, and some may be located within existing structures, all future projects would be subject to

applicable building codes and CEQA review. Consequently, impacts related to fire services are anticipated to be less than significant.

Police Protection

Law enforcement services are provided by the City of Santa Maria Police Department (SMPD). There is one police station located at 1111 West Betteravia Road and approximately 700 police department personnel (City of Santa Maria 2024). Professional police services include maintaining civil order, preventive patrol, investigations, traffic control and enforcement, criminalistics, crime prevention, drug enforcement, and abuse prevention. The department houses the public safety dispatch center for police and fire, which receives all emergency 9-1-1 and non-emergency calls for services (City of Santa Maria 2020a). The Santa Maria Police Department Communications Center handles over 170,000 incoming calls for service every year (about 465 per day). There are 63,000 emergency 9-1-1 calls per year (about 172 per day).

Development facilitated by the plan would increase population and activity levels in Santa Maria, potentially leading to higher demand for police protection services. The Santa Maria Police Department would provide law enforcement citywide, with development required to undergo security review during the plan check process and to pay police mitigation fees under SMMC Chapter 8-15. The Santa Maria Police Department also serves as an aerial firefighting base for CalFire. The plan also includes policies to maintain effective law enforcement coverage, such as Policy PFS 7-1, which targets a service ratio of 1.3 sworn officers per 1,000 residents, and Policy PFS 7-2, which guides the siting of facilities to optimize response times. To meet future demands, additional police staffing or new facilities may be needed. While the exact nature and location of any new facilities are not yet known, and some may occupy existing structures, all future projects would be subject to applicable building codes and CEQA review. Consequently, impacts related to police services are anticipated to be less than significant.

Schools

Future development facilitated by the plan would result in an increase in population in the city, which would contribute to an increase in students who would be served by either Santa Maria-Bonita School District, Santa Maria Joint Union High School District, or the Orcutt Union School District. Future residential, commercial, and industrial development in Santa Maria would be required to pay state-mandated impact mitigation fees to provide funding for additional schools to serve the area, pursuant to Senate Bill 50. Pursuant to Section 65995(h) of the California Government Code the payment of statutory fees "…is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization." The mandatory payment of impact mitigation fees would serve as full and complete mitigation for future development. Additionally, the plan includes Policies PFS-10.1, PFS-10.2, PSF-10.3 and PFS-10.4 which aim to ensure that educational infrastructure and programming keep pace with community growth. They focus on monitoring enrollment trends, coordinating school siting in a way that respects nearby land uses, expanding access to inclusive and affordable educational programs, and supporting planned improvements at Hancock College in harmony with surrounding neighborhoods. As such, impacts to school facilities would be less than significant.

Parks and Recreation Facilities

Future development facilitated by the plan would result in an increase to the city's population, which would result in an incremental increase in demand on existing public parks and recreation facilities including playfields, performing arts centers, gymnasiums, community pools and aquatic centers. The City includes 25 percent of Waller Park, a Santa Barbara County facility, in its park service analysis as it is frequently used by residents which would increase the acreage of parkland from 234 acres to 271 acres (City of Santa Maria 2020a). The City's existing service ratio is approximately 2.5 acres per 1,000 residents for the existing 2024 population as reported by the California Department of Finance of 110,608 (California Department of Finance 2024).[3] With the implementation of the plan, the addition of a maximum of 58,265 residents would decrease the service ratio to 1.6 acres per 1,000 residents.[4] The City's park service ratio with the plan would be below its service goal of 5 acres of parkland per 1,000 residents. As such, the population growth associated with the plan would require the need for new parks.

Construction or expansion of future parks would require separate environmental review that could determine and require future project-specific construction-related mitigation measures. Pursuant to the Quimby Act park dedication ordinance, future development projects would be required to pay parkland dedication fees which, pursuant to Section 65995 (3) (h) of the California Government Code (SB 50, chaptered August 27, 1998), are "deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization." In addition, pursuant to Chapter 8-15 of the SMMC, future development facilitated by the plan would be required to pay impact fees, which would promote the maintenance and expansion of public parks.

The plan includes Policies REC-1.2, REC-1.3, REC-1.4 and REC-1.5 which aim to enhance equitable and connected recreation opportunities across the city, and Policies REC-2.1, REC-2.2 and REC-2.3 which aim to ensure equitable access to open space and recreational opportunities by maintaining a citywide parkland standard, securing funding through mitigation fees and grants, and protecting existing park resources. The plan policies promote the use of temporary facilities to address short-term needs, encourage shared use of public lands, ensure consistent maintenance of existing infrastructure, and prioritize the development of a multi-use trail network that links neighborhoods, parks, and open spaces for a variety of users. With the existing and new policies and programs, in addition to existing Recreation and Parks mitigation fee regulations within Section 8-15of the SMMC which requires impact fees be paid for new dwelling units, impacts to parks and recreational facilities would be less than significant.

Other Public Facilities

Development facilitated by the plan would result in an increase in population which could result in an increased demand for library services. Pursuant to the SMMC Chapter 8-15, future development would be required to pay library mitigation fees. Given the demand for library services in the city, library staffing needs in Santa Maria are likely to increase, which could require the construction of new facilities. The plan includes Policies PFS-5.1, PFS-5.2, and PFS-5.3 which aim to ensure that library services grow with the community by maintaining adequate space and book collections, improving access through inclusive facilities and outreach methods, and expanding educational programming for youth through after-school and seasonal initiatives. Future facilities could be

[3] 2.5 acres per 1,000 residents = (271 acres of parks / 110,608 persons) * 1,000 persons
[4] 1.6 acres per 1,000 residents = (271 acres of parks / 168,873 persons) * 1,000 persons

located within the city but would require adherence to all applicable building and zoning codes and additional CEQA review to analyze project and location specific impacts. It is not possible to identify the specific nature, extent, and significance of physical impacts on the environment that could result from the construction and operation of future facilities without knowing the size and nature of the facility, or its location. For example, future facilities could feasibly be housed in an existing building, which would have a reduced physical impact on the environment than the construction of a new facility. As such, impacts related to library services would be less than significant.

4.9.9 Wildfire

Thresholds of Significance

Based on Appendix G of the CEQA Guidelines a project may have a significant impact on wildfire if located in or near state responsibility areas or lands classified as very high fire hazard severity zones and would:

1. Substantially impair an adopted emergency response plan or emergency evacuation plan;
2. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, or thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire;
3. Require the installation or maintenance of associated infrastructure (such as roads, fuelbreak, emergency water sources, power lines, or other utilities) that may exacerbate fire risks or that may result in temporary or ongoing impacts to the environment?
4. Expose people or structures to significant risks, including downslope or downstream flooding, landslides, mud flows, as a result of runoff, post-fire slope instability, or drainage changes

Impact Analysis

The potential for wildfire risks in Santa Maria is characterized by limited grassland and brush fires due to the absence of extensive tracts of mountainous and brush covered terrain. The most significant wildfire hazards in the city are associated with the coastal sage scrub and grass covered slopes in the Casmalia and Solomon Hills area, south of the city limits (Santa Maria 2025).

A Fire Hazard Severity Zone (FHSZ) is a mapped area that designates zones (based on factors such as fuel, slope, and fire weather) with varying degrees of fire hazard (i.e., moderate, high, and very high). While FHSZs do not predict when or where a wildfire will occur, they do identify areas where wildfire hazards could be more severe and therefore are of greater concern. FHSZs are meant to help limit wildfire damage to structures through planning, prevention, and mitigation activities/requirements that reduce risk. The FHSZs serve several purposes: they are used to designate areas where California's wildland urban interface building codes apply to new buildings, they can be a factor in real estate disclosure, and they can help local governments consider fire hazard severity in the safety elements of their general plans.

As identified on the most recent FHSZ maps provided by CalFire, a portion of the annexation area is located within a moderate FHSZ. However, no portion of the city or annexation area is located within a high or very high FHSZ. (CalFire 2025). The nearest Very High FHSZ is to the east of the Santa Maria River. The implementation of the 2045 General Plan Update would not interfere with emergency evacuation plans or emergency response plans within a FHSZ or state responsibility area; exacerbate wildfire risks and thereby expose the public to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire; require the installation or maintenance of associated

infrastructure within a FHSZ or state responsibility area; or expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Additionally, the plan includes Policies S-2.1 and S-2.2 which are intended to strengthen fire prevention and emergency preparedness by ensuring the City maintains adequate firefighting capacity and response times as development occurs, and by enforcing vegetation management through coordinated weed abatement efforts to reduce wildfire and urban fire risk. Due to the lack of fire hazard severity zones within the city and the new policies, impacts on wildfire would be less than significant.

This page intentionally left blank.

5 Other CEQA Required Discussions

This chapter discusses other issues as required by CEQA, in addition to the specific issue area discussed in Chapter 4, *Environmental Impact Analysis*.

5.1 Growth Inducement

Section 15126(d) of the CEQA Guidelines requires a discussion of a proposed project's potential to foster economic or population growth, including ways in which a project could remove an obstacle to growth. Growth does not necessarily create significant physical changes to the environment. However, depending upon the type, magnitude, and location of growth, it can result in significant adverse environmental effects. The proposed project's growth inducing potential is therefore considered significant if project-induced growth could result in significant physical effects in one or more environmental issue areas.

5.1.1 Population and Economic Growth

As described in Table 2-1 of Chapter 2, *Project Description*, plan buildout is anticipated to enable an additional 16,140 residential units and 23,750 employees. As described in Section 4.10, *Effects Found Not to be Significant*, based on the California Department of Finance's population estimates, which identified Santa Maria's average household size of 3.61 persons per household, implementation of the plan could lead to an increase of approximately 58,265 residents[1] in the city. The plan could facilitate population growth in the area. However, the population growth associated with the plan would not be considered substantial unplanned growth. As a planning document, the plan would be a key tool to help the City plan and conduct growth. Implementation of the policies and associated actions included in the plan would assist in managing growth and infill development such that development and redevelopment would occur in an orderly manner. These policies and actions include the following:

> **Policy LU-1.1: Land use pattern.** Implement the General Plan Land Use Map and corresponding Land Use Designations as described in Figure LU-4 and in Table LU-3 to create a complete community.
>
> > **Action LU-1.1.1:** Following adoption of the General Plan Update, prepare a comprehensive update of the City's zoning code with districts that mirror the General Plan designations and allow flexibility in uses without the need for Planned Development Overlay districts.
> >
> > **Action LU-1.1.2:** Implement the Santa Maria Objective Design Standards and recommended Design Review process that streamlines the existing process of reviewing applications for the development of vacant sites or site redevelopment.
> >
> > **Action LU-1.1.3:** Amend the Area 9 Specific Plan to allow low-density residential uses along A Street, consistent with the LMDR designation.

[1] This calculation represents a conservative analysis in which every potential residential unit (16,140 as described in Section 2.6.5, Proposed 2045 General Plan Buildout) is occupied at the full potential persons per household rate of 3.61 as determined by the California Department of Finance.

Policy LU-1.2: Infill development. Prioritize infill of existing residential, commercial, and industrial capacity to revitalize Downtown and deteriorating neighborhoods, to the extent feasible. Accommodate growth while making every effort to preserve agricultural lands and open space.

Action LU-1.2.1: Implement the city's adopted Specific Plans.

Policy LU-1.3: Areas of change. Focus new development, infill, and higher density or intensity development along the city's primary corridors (Main Street and Broadway), within the Downtown, and in surrounding neighborhoods.

Policy LU-1.4: Neighborhood preservation. Support the revitalization and enhancement of older neighborhoods in the Downtown and surrounding areas by continuing to invest in infrastructure and streetscape upgrades.

Policy LU-1.5: Job/housing balance. Achieve a job-to-housing ratio of 1.2 that balances new housing development and job production in Santa Maria over the General Plan horizon.

Policy LU-13.1: Land use buffers. Require the use of buffers between incompatible land uses by using context-appropriate buffers such as berms, walls, landscaping, bike paths, and arterial streets, where appropriate and depending on neighboring use, to avoid adverse impacts to either use.

Action LU-13.1.1: Update the City's municipal code to protect sensitive land uses by, for example, requiring a buffer between sensitive uses and local sources of air pollution such as industrial and commercial facilities (e.g., warehouses, processing plants, factories, landfills, hazardous waste facilities). Developments should incorporate appropriate mitigation measures that reduce potential pollution exposure.

Policy LU-13.2: Residential encroachment. Protect residential neighborhoods and schools from encroachment by incompatible nonresidential uses such as light industrial, general industrial, and heavy commercial/manufacturing, and the impacts associated with adjacent nonresidential activities.

Policy LU-13.3: Land use transitions. Require land use transitions of lower intensity commercial or mixed-use on the perimeter of heavy uses when adjacent to residential uses.

Policy LU-13.4: Incompatible neighborhood uses. Prohibit the development of industrial or manufacturing uses within neighborhoods or directly adjacent to established residential neighborhoods or schools.

Policy LU-13.5: Industrial and residential buffers. Mitigate the impacts of industrial land that exists adjacent to residential uses by permitting only light industrial uses in those areas, along with requiring the industrial development to provide appropriate buffers so that the use does not negatively impact the residential development.

Policy LU-13.6: Incompatible uses. Prohibit new residential development, and those retail, commercial, office, and/or consumer-oriented businesses in close proximity to the Airport which the City determines would conflict with the Airport Master Plan and Santa Maria Airport Land Use Compatibility Plan (ALUCP), including through utilizing processes set forth by Article 3.5 of the Public Utilities Code.

Policy LU-13.7: Airport and residential buffers. Require transition zones and buffers between the Airport and new residential development in close proximity to the Airport, as defined by the ALUCP, to mitigate impacts of ongoing airport operations.

Policy LU-13.8: Development compatibility. Ensure that new development within the Santa Maria Airport Area of Influence is consistent with standards and regulations set forth by local and regional Airport Land Use Compatibility Plans.

Action LU-13.8.1: Review new development for consistency with the Santa Maria Airport Safety Zone Compatibility Criteria, Table 3-2, of the Santa Maria Airport Land Use Compatibility Plan, and with the regulations and processes set forth by Article 3.5 of the Public Utilities Code.

Growth in Santa Maria would occur regardless of implementation of the plan. While growth is anticipated by the plan that would exceed current projections by SBCAG, the growth would not be unplanned since it is contemplated by the plan. As described in the plan, the proposed project's vision for Santa Maria was developed with extensive community input and in recognition of the State's planning and housing priorities. The plan identifies major strategies and physical improvements for Santa Maria through 2045, including, but not limited to, use of mixed-use areas, strengthening locally owned business and community-supported tourism, enhancing existing neighborhoods, and maintaining adequate public facilities and services for anticipated growth. Because the plan is designed for orderly growth, as mandated by the state, the plan would not result in substantial impacts related to population and economic growth.

5.1.2 Removal of Obstacles to Growth

Development facilitated by the plan would require new utility connections, including connections to water, hydrants, sewers, electricity, telecommunications, or other utilities like stormwater facilities. The plan promotes mixed-use and infill development where existing infrastructure, including roads, water mains, and sewer mains, are present. Utility connections would generally occur within individual footprints or rights-of-way that were previously disturbed, minimizing the impact of development on existing infrastructure and services. The policies and programs of the plan would facilitate development in the Planning Area, thereby providing a roadmap for sustainable growth in Santa Maria. Therefore, the plan would not result in significant growth inducement due to the removal of an obstacle to growth.

5.2 Irreversible Environmental Effects

CEQA Guidelines Section 15126(c) requires a discussion of significant irreversible environmental changes that could result from a project, should a project be implemented. This chapter addresses non-renewable resources, the commitment of future generations to the proposed uses, environmental accidents, and irreversible impacts associated with the plan.

Implementation of the plan could irreversibly increase local demand for non-renewable energy resources such as petroleum products and natural gas. However, increasingly efficient building design would offset this demand to some degree by reducing energy demands of future development. As described in Section 4.10, *Effects Found Not to be Significant*, development facilitated by the plan would be subject to the energy conservation requirements of the California Energy Code (Title 24, Part 6 of the California Code of Regulations, California's Energy Efficiency Standards for Residential and Nonresidential Buildings) and Green Building Standards Code

(California Code of Regulations, Title 24, Part 11). The California Energy Code provides energy conservation standards for all new and renovated buildings, and Green Building Standards Code requires solar access, natural ventilation, and stormwater capture. New and existing development in Santa Maria is provided electricity procured by Central Coast Community Energy, which emphasizes the use of renewable energy resources. In accordance with Senate Bill 100, new and existing development will eventually be powered entirely by renewable energy procured by Central Coast Community Energy. Furthermore, the plan would implement several policies which would require efficient energy use and promote renewable energy programs. Consequently, development facilitated by the plan would not use unusual amounts of energy or construction materials. Consumption of these resources would occur with any development in the region and is not unique to the plan. Therefore, implementation of the plan would not result in significant irreversible environmental changes related to energy use.

Growth facilitated by the plan could require an irreversible commitment of fire protection, law enforcement, water supply, wastewater treatment, and solid waste disposal services. As discussed in Section 4.8, *Utilities and Service Systems,* and under public services and recreation in Section 4.9, *Effects Found Not to be Significant,* potential impacts to public services and utilities and service systems would be less than significant following implementation of policies included in the plan, as well as future project-specific environmental review that would be required for any future public service or utility facility constructed in accordance with the plan.

The anticipated increase in buildout associated with the plan could contribute to air quality. As described in Section 4.2, *Air Quality and Greenhouse Gas Emissions*, the plan has the potential to result in the irreversible emission of cumulatively considerable criteria pollutant emissions and exposure of sensitive receptors to substantial pollutant concentrations. Even with implementation of Mitigation Measures AQ-1 and AQ-2, which require use of fugitive dust control measures, project specific air quality analyses and mitigation, construction of those projects could result in an irreversible environmental effect in the Planning Area with regards to air quality emissions. The proposed plan would also have the potential to generate greenhouse gas emissions that may result in cumulatively considerable impacts as there is no guarantee the plan would be consistent with the State-wide target of net-zero GHG emissions by 2045.

Demolition and ground-disturbing activities facilitated by the plan could cause a substantial adverse change in the significance of a historical, archaeological, or tribal cultural resource. Even with implementation of applicable plan policies and Mitigation Measures CUL-1 through CUL-4 and TCR-1 and TCR-2, damage to or destruction of a known or previously unknown historical, archaeological, or tribal cultural resources could occur because of the proposed project. Therefore, the plan could irreversibly impact historical resources in the Planning Area.

5.2.1 Significant Unavoidable Impacts

Section 15126.2(b) of the CEQA Guidelines requires that an EIR describe any significant impacts, including those that can be mitigated but not reduced to less-than-significant levels, as a result of implementation of the project. The following environmental issues were determined to result in potential significant and unavoidable impacts:

- Impact AG-1: Land use changes in the annexation area have the potential to conflict with existing zoning for agriculture. There are no feasible mitigation measures that would avoid or fully mitigate for the conversion of Farmland or agriculturally zoned lands..

- Impact AQGHG-1: The 2045 General Plan Update would result in new emissions that may exceed the 2022 Ozone Plan's direct and indirect emissions inventory for the County. As a result, the plan would conflict with or obstruct implementation of the 2022 Ozone Plan.
- Impact AQGHG-2: The 2045 General Plan Update could result in a cumulatively considerable net increase of all criteria pollutants for which the plan region is non-attainment under an applicable federal or State ambient air quality standard.
- Impact AQGHG-5: Development facilitated by the 2045 General Plan Update would generate GHG emissions that may have a significant impact on the environment and conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.
- Impact NOI-1: Development facilitated by the 2045 General Plan Update would result in construction noise that may impact nearby noise-sensitive land uses. The plan would introduce new noise sources and contribute to an increase in long-term operational noise levels within the city limit as well as the annexation area.
- Impact TRA-2: The future (2045) citywide rates of VMT with the 2045 General Plan Update would not meet the 17 percent VMT reduction target required to be consistent with CEQA Guidelines 15064.3(b). There are no feasible General Plan policies or mitigation measures that could reduce citywide rates of VMT below the VMT reduction target.

This page left intentionally blank.

6 Alternatives

Section 15126.6 of the *CEQA Guidelines* provides guidance for the identification and evaluation of project alternatives in an EIR. The *CEQA Guidelines* state that an "EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives." This EIR examines a range of reasonable alternatives to the 2045 General Plan Update that would attain most of the basic plan objectives but may avoid or substantially lessen significant adverse impacts.

6.1 Alternatives Development and Screening Process

As stated in Chapter 2, *Project Description*, the 2045 General Plan Update presents a vision for the future of the City and a set of objectives for how the City would achieve that vision. This vision and its objectives capture the City's key aspirations for the future. As discussed in Chapter 2, *Project Description*, the objectives for the plan, are as follows:

- **Agricultural Identity.** Continue to support the agricultural industry and its workforce. Balance the protection of prime agricultural land with the development necessary to support continued population growth and the diversification of the local economy.
- **Culture, History, and Art.** Celebrate and share Santa Maria's multicultural heritage and contemporary diversity. Preserve historic resources, foster the arts, maintain a strong sense of community through cultural festivals, and invite visitors to enjoy the richness of local expression and resources.
- **Community Design.** Create public spaces that reflect the community identity, foster civic pride, and invite community members to gather, both informally and for events. Design streets, buildings, and landscaping that reflect the community's history, culture, and natural environment. Use lighting, street trees, benches, and other amenities to make sidewalks and public spaces safe and welcoming, with a focus on the Downtown and along the Main and Broadway corridors.
- **Community Health.** Grow and expand physical and mental healthcare services to meet the needs of all residents. Improve community health by addressing the environmental justice priorities of disadvantaged communities, including seniors, low-income households, linguistically isolated families, the homeless, and youth, who comprise 35 percent of residents. Minimize residents' potential for exposure to noise, pesticides, and industrial pollution. Foster healthy lifestyles by expanding safe and attractive options for physical activity and by expanding healthy food access.
- **Natural Environment and Resilience.** Conserve water resources in the city and support efforts to maintain the Santa Maria River. Expand opportunities to enjoy the area's natural resources and the region's beauty. Safeguard the community from natural hazards, including those exacerbated by climate change.
- **Housing Quality and Choice.** Develop a high-quality and diverse housing supply at all levels of affordability that preserves Santa Maria as a place where families can establish roots and today's youth can afford to stay. Balance the growth of housing and the economy so that people can live and work in Santa Maria. As new housing types are introduced, (e.g., accessory dwelling

units (ADUs), adapt parking, transportation, and other community features. Develop workforce housing solutions that provide safe, healthy, and comfortable homes for workers and their families.

- **Resilient Economy.** Cultivate a diverse and resilient economy in which local businesses and families thrive and job growth keeps apace with housing development. Grow the existing economic base in agriculture, retail, healthcare, and business services, and expand into new industries. Ensure access to high quality education that is aligned with local industries and entrepreneurship.
- **Connected Growth.** To accommodate projected population, housing, and jobs growth, focus on improvements to existing neighborhoods along with infill and vacant site development. Expand beyond current City limits when needed, weighing the short and long term environmental, economic, infrastructure, public service, and fiscal trade-offs. Establish strong cultural, design, and physical connections between newly developed areas and the rest of Santa Maria.
- **Transportation Innovations.** Develop a balanced, equitable, affordable, and reliable transportation network where pedestrians, cyclists, trucks, cars, rail, and transit can safely and efficiently navigate to destinations within Santa Maria. Focus on maintaining existing roadways, expanding walking and biking options, and reducing congestion and maintenance costs. Transform corridors and streets from points of conflict among people, cyclists, cars, and trucks into places that bring neighborhoods and families together. Prepare for and expand regional connections with enhanced bus, rail, and air service. Prepare for technological advances like autonomous vehicles and remote work, and take advantage of opportunities and incentives to reduce vehicle miles traveled (VMT) and greenhouse gas (GHG) emissions.
- **Infrastructure, Utilities, Facilities, and Services**. Provide residents and businesses with equitable access to affordable, reliable, and sustainable infrastructure and utilities, including water, wastewater, flood control, gas, phone, cable, and broadband internet. Deliver high-quality services and facilities for all community members, including expedient emergency response, accessible health care, high-quality education and career training, and convenient and equitable access to well-maintained parks and recreational facilities.
- **Governance and Engagement.** Continue to conduct and increase meaningful and inclusive civic engagement that empowers a diversity of perspectives in public decision-making. Provide residents and businesses with high-quality, equitable, and accessible customer service, including City communications and events in multiple languages and interpretation services. Partner with community organizations and institutions to build trust and increase participation, including among youth, who will be the City leaders in 2045.

Included in this analysis are three alternatives, including the CEQA-required “no project” alternative, that involve changes to the project that may reduce the project-related environmental impacts as identified in this EIR. Alternatives have been developed to provide a reasonable range of options to consider that would help decision makers and the public understand the general implications of revising or eliminating certain components of the 2045 General Plan Update.

The following alternatives are evaluated in this EIR:

- Alternative 1: No Project Alternative
- Alternative 2: Infill Only Alternative
- Alternative 3: Greater Annexation Alternative

Detailed descriptions of the alternatives are included in the impact evaluation for each alternative. The potential environmental impacts of each alternative are discussed in Section 6.2 through Section 6.4. As required by CEQA, this section also includes a discussion of the "environmentally superior alternative" among those studied, included as Section 6.5 and summarized in Table 6-1.

6.2 Alternative 1: No Project Alternative

6.2.1 Description

Under the No Project Alternative, the City of Santa Maria would not adopt the 2045 General Plan Update. Instead, development would continue in accordance with the existing General Plan. This alternative assumes that current land use designations, policies, and growth projections would remain in effect, guiding future development and infrastructure decisions. For the purpose of this analysis, the No Project Alternative is assumed to result in reduced overall buildout potential compared to the 2045 General Plan Update, as it reflects continuation of existing land use designations and policies without the proposed changes that would facilitate additional growth.

While some development would still occur under existing entitlements and zoning regulations, the City would not implement the new land use strategies, environmental protections, or housing and mobility policies in the plan. As a result, the No Project Alternative would not fulfill the objectives of the 2045 General Plan Update because it would not fully address evolving community needs, state housing requirements (future RHNA cycles), or infrastructure demands anticipated through 2045. However, as discussed in detail in Section 6.2.2, this alternative would avoid the potential environmental impacts associated with the increased development intensity and expanded planning strategies in the plan.

6.2.2 Impact Analysis

a. Agricultural Resources

With reduced buildout potential compared to the 2045 General Plan Update, the No Project Alternative would place less development pressure on agricultural lands, resulting in reduced impacts to agricultural resources. The No Project Alternative would continue growth in accordance with the existing General Plan and as such, would not extend growth into tracts of Prime Farmland, Farmland of Statewide Importance, or Unique Farmland in the annexation area. In addition, the No Project Alternative would not result in new land use changes on agricultural plans within the city or the annexation area, which includes Prime Farmland and Williamson Act lands. Therefore, the No Project Alternative would have reduced impacts compared to the 2045 General Plan Update. Overall, the No Project Alternative would reduce impacts to agricultural resources to a less than significant level.

b. Air Quality and Greenhouse Gas Emissions

Air Quality: The lower level of development anticipated under the No Project Alternative would generate reduced vehicle trips and less energy use, resulting in reduced impacts on air quality and GHG emissions. However, the No Project Alternative would not implement the policies from the plan that aim to maintain air quality and protect public health in Santa Maria. Furthermore, this alternative would not be required to implement Mitigation Measures AQGHG-1 and AQGHG-2, which aim to reduce construction-related air pollutant emissions by requiring future development in

Santa Maria to implement best management practices consistent with Santa Barbara County Air Pollution Control District (SBCAPCD) guidelines and require construction projects to utilize Tier 3 equipment of higher to reduce construction related TAC exposure. Similar to the 2045 General Plan Update, construction facilitated by the No Project Alternative has the potential to emit fugitive dust and criteria air pollutants that exceed SBCAPCD's standards. As such, impacts related to air quality would be reduced compared to the 2045 General Plan Update but would remain significant and unavoidable as fugitive dust and criteria air pollutant emissions from the No Project Alternative may still exceed SBCAPCD's standards.

Greenhouse Gas Emissions: The No Project Alternative would be generally consistent with the goals of the 2045 General Plan Update since future development would be required to comply with the latest Title 24 Green Building Code and Building Efficiency Energy Standards and applicable State law. However, the No Project Alternative would not include new policies aimed at reducing GHG emissions within the city. While development would be reduced in comparison to the 2045 General Plan Update, there is no assurance that the No Project Alternative would be consistent with the State-wide target of net-zero GHG emissions by 2045. While impacts would be reduced compared to the 2045 General Plan Update, impacts related to GHG emissions would remain significant and unavoidable due to potential inconsistencies with the State-wide target.

c. Biological Resources

Less growth and development outside of the existing ~~urban footprint~~ city boundary under the No Project Alternative would reduce the potential for habitat disturbance, leading to reduced impacts to biological resources. However, the No Project Alternative would not implement the policies from the 2045 General Plan Update that aim to enhance the protection of biological resources, such as development review and critical habitat protection. Specifically, the No Project Alternative would not implement Mitigation Measures BIO-1(a) through BIO-1(k), which require future development to avoid, minimize, or offset impacts to sensitive species and habitats through surveys, construction buffers, habitat restoration, and compliance with agency regulations. As a result, development facilitated by the No Project Alternative has the potential to disturb special status plant species, endangered/threatened animal species, and important habitat. As a result, development facilitated by the No Project Alternative would have a greater potential to adversely affect biological resources compared to the 2045 General Plan Update, and overall impacts to biological resources would be significant and unavoidable.

d. Cultural and Tribal Cultural Resources

Cultural Resources: Given its lower buildout potential, the No Project Alternative would involve less ground disturbance overall and therefore reduce the likelihood of impacting cultural and tribal cultural resources. However, the No Project Alternative would not implement the policies from the 2045 General Plan Update that aim to protect historical and culturally significant resources. In the absence of new policies to protect historical and culturally significant resources or the plan-level mitigation measures associated with the 2045 General Plan Update, the No Project Alternative would be required to implement mitigation on a project-by-project basis. As a result, potential impacts to historical and culturally significant resources would be greater than under the 2045 General Plan Update, and would be significant and unavoidable.

Archaeological Resources: The No Project Alternative would result in reduced buildout potential compared to the 2045 General Plan Update and therefore have less potential to disturb subsurface archaeological resources. However, this alternative would not implement the policies from the 2045

General Plan Update that would require archaeological resources assessments or implement unanticipated discovery procedures for development involving ground-disturbing activities. In the absence of new policies to prevent the disturbance of subsurface archaeological resources, the potential for the No Project Alternative to substantially disturb archaeological resources is higher than the 2045 General Plan Update and would need to implement mitigation in order to reduce impacts to a less than significant level. In addition, the No Project Alternative would not implement Mitigation Measures CUL-1 through CUL-4(b), which aim to protect archaeological and historical resources by requiring pre-construction surveys, construction monitoring, and procedures for the treatment of any discovered resources, necessary for reducing impacts. Therefore, potential impacts to cultural impacts under this alternative would be greater than under the 2045 General Plan Update .

Tribal Cultural Resources: Similar to the 2045 General Plan Update, development facilitated by the No Project Alternative would be subject to the requirements of AB 52 and if required, SB 18. However, the No Project Alternative would not implement Mitigation Measures CUL-4(a) and CUL-4(b), which ensure tribal consultation and protection of tribal cultural resources through construction monitoring by tribal representatives and protocols for the discovery and treatment of tribal resources, and thus would not ensure project-specific tribal cultural resource identification and consultation, and the appropriate avoidance, minimization, or mitigation. In the absence of new policies to protect tribal cultural resources or the plan-level mitigation measures associated with the 2045 General Plan Update, the No Project Alternative would have greater impact on tribal cultural resources as the 2045 General Plan Update. Future development under the No Project Alternative would be required to implement mitigation measures to avoid or minimize impacts to tribal cultural resources. Therefore, potential impact to tribal cultural resources would be greater than under the 2045 General Plan Update, and would be significant and unavoidable.

e. Hydrology and Water Quality

Compared to the 2045 General Plan Update, the No Project Alternative would introduce reduced impervious surfaces and require reduced infrastructure extensions, reducing potential impacts on hydrology and water quality. Under the No Project Alternative, fewer residential units would be developed compared to the 2045 General Plan Update, consistent with existing land use designations and zoning. Ground-disturbing construction activities that could potentially affect water quality from sedimentation or accidental spills would occur following current adopted zoning. Any changes related to hydrology, water quality, watersheds and drainage patterns, flood and inundation hazards, and ground water resource management caused by changes in existing development would follow the currently adopted standards. Therefore, the No Project Alternative impacts related to hydrology and water quality would be less than significant, similar to the 2045 General Plan Update.

f. Noise

Although the No Project Alternative would involve less overall development than the 2045 General Plan Update, resulting in reduced construction activity and traffic volumes, its lack of policies and mitigation to address noise and vibration would ultimately lead to greater noise impacts. The No Project Alternative would not implement the policies from the 2045 General Plan Update that aim to promote land uses compatible with future noise levels or minimize transportation noise and other intermittent noise. In addition, the No Project Alternative would not implement Mitigation Measures NOI-1(a), NOI-1(b), or NOI-2, which require construction activities to follow noise-

reduction practices to minimize noise impacts on nearby sensitive receptors. Without implementation of these mitigation measures, potential construction and operation noise impacts would remain significant and unavoidable, and potential impacts from construction groundborne vibration would change from less than significant to significant and unavoidable. Therefore, overall noise impacts induced by the No Project Alternative would have slightly greater impacts than the 2045 General Plan Update related to construction noise, operational noise, and construction groundborne vibration. These impacts would be significant and unavoidable.

g. Transportation and Traffic

Lower buildout under the No Project Alternative would result in reduced daily trips and reduced roadway congestion compared to the 2045 General Plan Update. The No Project Alternative would not implement the goals and policies included in the 2045 General Plan Update to reduce VMT, including the promotion of different modes of transportation including transit and active transportation. Unlike the 2045 General Plan Update, the No Project Alternative would not place an emphasis on mixed-use and infill development in Santa Maria. Without policies to guide mixed-use and infill development, it is anticipated that regional VMT would increase as residents and employees commute longer distances. Therefore, the No Project Alternative would have slightly greater impacts on VMT, and impacts would remain significant and unavoidable

h. Utilities and Service Systems

As a result of the reduced development intensity, the No Project Alternative would generate lower demand on water, wastewater, energy, and solid waste systems. However, the No Project Alternative would not implement the policies included in the 2045 General Plan Update that aim to ensure citywide utility infrastructure supports development. As a result, overall demand would be lower, the absence of utilities planning and infrastructure policies could limit the City's ability to manage utility impacts efficiently. In addition, the No Project Alternative would not include the annexation area, unlike the 2045 General Plan Update. Therefore, the No Project Alternative would not require the establishment of new or expanded utilities infrastructure in order to service the city's expansion. Similar to the 2045 General Plan Update, development facilitated by the No Project Alternative would be required to comply with all applicable federal, State, and local regulations regarding water, wastewater, and waste disposal. Therefore, impacts would be slightly reduced overall due to lower development levels when compared to the 2045 General Plan and would remain less than significant.

6.3 Alternative 2: Infill Only Alternative

6.3.1 Description

Under the Infill Only Alternative, the City of Santa Maria would adopt the 2045 General Plan Update, including all goals and policies. However, the Infill Only Alternative would exclude the annexation of areas located east of the current City limits and direct development to areas within existing urban or suburban areas as infill, redevelopment, or increased densities. For the purpose of this analysis, the Infill Only Alternative is assumed to result in a similar overall level of buildout and population growth compared to the 2045 General Plan Update, despite the exclusion of future development in the eastern annexation area. Therefore, this analysis assumes that the Infill Only Alternative would result in the addition of approximately 16,000 new residential units and up to 23,750 new jobs associated with new commercial development within city limits.

While this alternative would reduce the geographic footprint of development, it would result in increased development pressure on existing neighborhoods and infrastructure. As a result, the Infill Only Alternative may not fulfill the primary objectives of the 2045 General Plan Update because it would not fully address evolving community health needs, state housing requirements, or opportunities for connected growth anticipated through 2045. However, as discussed in detail in Section 6.3.2, this alternative would avoid environmental impacts in the annexation area, such as conversion of agricultural land, fragmentation of open space, or potential effects on biological resources, while potentially exacerbating environmental impacts associated with the increased development density in existing neighborhoods.

6.3.2 Impact Analysis

a. Agricultural Resources

By accommodating a similar amount of development entirely within existing City limits, the Infill Only Alternative would avoid the annexation area's agricultural lands and result in reduced impacts to farmland. While the Farmland Mapping and Monitoring Program still designates areas within the city as Important Farmland, the conversion of these areas and associated land use changes have been previously evaluated in earlier environmental documents which are listed in Section 4.1, *Agricultural Resources*. Under this alternative, future growth would rely on redevelopment and increased densities within existing urbanized areas and locations already designated for urban development rather than expansion into agricultural lands. The Infill Only Alternative would not convert agricultural lands within city limits because lands within city limits currently used for agricultural purposes have been previously designated for planned urban redevelopment in specific plans or earlier iterations of the General Plan. As discussed in Section 4.1, *Agricultural Resources,* environmental documents such as the Sphere of Influence Expansion Environmental Impact Report (SCH #90010930), the Area 9 Specific Plan Environmental Impact Report (SCH #2008071018), the Blosser-Southeast Specific Plan Amendment Supplemental Environmental Impact Report (SCH #1994107909),and the Betteravia Plaza General Plan Amendment, Land Use and Zone Change and Development Agreement Environmental Impact Report (SCH #2015011029) have evaluated impacts to agricultural resources from the conversion of agricultural lands within the city. As a result, these lands have land use and zoning designations intended for urban redevelopment and would not be considered a conversion of existing agricultural uses. The exclusion of future development in the eastern annexation area would reduce impacts to agricultural resources in comparison to the 2045 General Plan Update. However, because this alternative limits development to infill sites, it would constrain opportunities for housing diversity and connected growth compared to the proposed plan. As the Infill Only Alternative would not result in the conversion of agricultural lands within City limits nor would it include the annexation area, this impact would be reduced to less than significant.

b. Air Quality and Greenhouse Gas Emissions

Air Quality: The Infill Only Alternative assumes a similar level of buildout and a more compact development pattern, which together would help lower GHG emissions and vehicle-related air pollutants. This infill-oriented growth pattern would be more compact, reducing VMT per capita and enhancing opportunities for walking, biking, and transit use, potentially reducing criteria air pollutant and GHG emissions on a per capita basis. However, similar to the 2045 General Plan Update, the Infill Only Alternative would still have the potential to exceed SBCAPCD standards related to fugitive dust and criteria air pollutants. Therefore, implementation of Mitigation Measures AQGHG-1 and AQGHG-2, which aim to reduce construction-related air pollutant

emissions by requiring future development in Santa Maria to implement best management practices consistent with SBCAPCD standards and use of Tier 3 or higher construction equipment, would be required. As such, impacts related to air quality would be reduced compared to the 2045 General Plan Update but would remain significant and unavoidable as fugitive dust and criteria air pollutant emissions from the Infill Only Alternative may still exceed SBCAPCD's standards.

Greenhouse Gas Emissions: While a more compact development pattern may support GHG reduction strategies, the City may still not achieve consistency with the statewide target of net-zero GHG emissions by 2045, and no feasible mitigation is available to reduce this impact to a less than significant level. Therefore, impacts associated with GHG emissions would be reduced compared to the 2045 General Plan Update, but would remain significant and unavoidable.

c. Biological Resources

Although total development would be similar to the proposed plan, growth under this alternative would be focused in previously urbanized or disturbed areas, resulting in less impact to natural habitats and biological resources overall. This could result in reduced impacts to biological resources, including habitat for special-status species potentially present in the eastern annexation area. Similar to the 2045 General Plan Update, the Infill Only Alternative would implement policies to enhance protection of biological resources, including development review and habitat conservation strategies. In addition, the Infill Only Alternative would implement Mitigation Measures BIO-1(a) through BIO-1(k), which require future development to avoid, minimize, or offset impacts to sensitive species and habitats through surveys, construction buffers, habitat restoration, and compliance with agency regulations. This would reduce potentially significant impacts to a less than significant level. As a result, impacts to biological resources would be reduced compared to the 2045 General Plan Update, and would be less than significant with mitigation incorporated.

d. Cultural and Tribal Cultural Resources

While overall buildout would be similar to the proposed plan, the infill-focused growth pattern would focus development within existing City limits, where land is already disturbed. Development of previously disturbed lands would reduce the potential for disturbing previously unidentified cultural and tribal cultural resources, particularly in comparison to development of the annexation area identified in the 2045 General Plan Update. Similar to the 2045 General Plan Update, the Infill Only Alternative would implement General Plan policies that aim to protect cultural and archaeological resources and would incorporate Mitigation Measures CUL-1 through CUL-4(b) as deemed necessary by the City, which aim to protect archaeological and historical resources by requiring pre-construction surveys, construction monitoring, and procedures for the treatment of any discovered resources. Implementation of these mitigation measures would reduce potential impacts to cultural resources to a less than significant level. The Infill Only Alternative would also comply with AB 52 and SB 18, and would implement Mitigation Measures CUL-4(a) and CUL-4(b), which ensure tribal consultation and protection of tribal cultural resources through construction monitoring by tribal representatives and protocols for the discovery and treatment of tribal resources. This would reduce potential impacts to tribal cultural resources to a less than significant level. Consequently, impacts to cultural and tribal cultural resources would be reduced compared to the 2045 General Plan Update and would remain less than significant with mitigation.

e. Hydrology and Water Quality

Because it directs growth to areas with existing drainage infrastructure, the Infill Only Alternative would reduce impacts to hydrology and water quality. As a result, impacts to hydrology and water quality would remain similar overall, but would be more focused within already urbanized areas. Unlike the 2045 General Plan Update, the Infill Only Alternative would not develop open space or agricultural lands to the east of the City, thereby avoiding new impervious surfaces in greenfield areas and reducing potential impacts on undeveloped drainage systems and natural waterways. Similar to the 2045 General Plan Update, development under the Infill Only Alternative would be required to adhere to existing NPDES permits and municipal code requirements. In addition, the Infill Only Alternative would implement policies that aim to protect groundwater supplies, groundwater recharge, and reduce impacts due to the release of pollutants from inundation. Because this alternative would focus on redevelopment and infill, stormwater improvements would be focused on upgrades to existing drainage infrastructure rather than extending new systems. Development under the Infill Only Alternative would comply with all federal, State, and local regulations to minimize water quality impacts and would not conflict with the Basin Plan. Therefore, impacts related to hydrology and water quality would be similar to those of the 2045 General Plan Update and would remain less than significant.

f. Noise

Although the scale of development would be similar to the proposed plan, infill development would occur in areas already exposed to urban activity, resulting in similar or slightly lower noise impacts overall. Construction-related noise could affect adjacent residences, schools, or care facilities located near infill sites. The Infill Only Alternative would implement policies aimed at reducing construction and operational noise, as well as groundborne vibration. Development facilitated by the Infill Only Alternative is expected to result in similar stationary noise and groundborne vibration levels as the 2045 General Plan Update. The Infill Only Alternative would include Mitigation Measures NOI-1(a) and NOI-1(b), which set conditions of approval for all development within 500 feet of a sensitive receptor and implementing roadway vehicle noise reduction measures. Focusing growth in already developed areas may also increase the likelihood of cumulative noise impacts along major corridors, such as Broadway and Main Street, due to traffic increases. However, similar to the 2045 General Plan Update, there would be no feasible mitigation that could avoid or fully mitigate the increase in construction and traffic noise in the plan area. As a result, potential construction noise impacts and operational traffic noise impacts would remain significant and unavoidable. Implementation of Mitigation Measure NOI-2, which requires construction vibration control measures to be incorporated, would reduce construction vibration impacts to a less than significant level. Overall, noise impacts would be similar to those of the 2045 General Plan Update and would remain significant and unavoidable.

g. Transportation and Traffic

Due to a more centralized pattern of growth, even with similar development levels, the Infill Only Alternative would result in reduced vehicle miles traveled and reduced congestion. This compact development pattern could reduce average trip lengths and improve access to services and jobs, particularly in areas already served by Santa Maria Area Transit (SMAT) and the city's active transportation network. Similar to the 2045 General Plan Update, the Infill Only Alternative would not conflict with the Connected 2050 RTP/SCS, the Santa Maria Active Transportation Plan, or any other applicable transportation plan or policy. Development facilitated by the Infill Only Alternative

would comply with State, Santa Maria Fire Department, and City requirements related to transportation design safety and emergency access. While the more compact pattern could slightly improve per capita VMT compared to the 2045 General Plan Update, the City as a whole would still not meet the 17 percent VMT reduction threshold required by SBCAG. Therefore, this impact would be slightly reduced over the 2045 General Plan Update but would still remain significant and unavoidable.

h. Utilities and Service Systems

While utility demand would be similar to the proposed plan, the Infill Only Alternative would allow for more efficient use of existing infrastructure within the City. Concentrating growth within City limits has the potential to improve service efficiency and reduce the need for new infrastructure extensions into greenfield areas. However, existing facilities may still require upgrades or capacity expansions to serve new development in the City limit. Like the 2045 General Plan Update, the Infill Only Alternative would be subject to applicable State and local requirements, and would be required to implement policies to ensure adequate public services. Therefore, impacts to utilities and service systems would be similar to those of the 2045 General Plan Update and would be less than significant with implementation of policies and mitigation measures.

6.4 Alternative 3: Greater Annexation Alternative

6.4.1 Description

Under the Greater Annexation Alternative, the City of Santa Maria would adopt the 2045 General Plan Update, including all goals, policies, and land use changes. However, the Greater Annexation Alternative would include a larger annexation area east of the current City limits. This alternative assumes a similar level of development density would occur in the larger annexation area, resulting in increased total development and an increased population compared to the 2045 General Plan Update. For the purpose of this analysis, the Greater Annexation Alternative is assumed to result in increased overall buildout potential and population growth compared to the 2045 General Plan Update, due to the inclusion of a larger annexation area and expanded Sphere of Influence.

The expanded geographic footprint of the Greater Annexation Alternative would fulfill many of the primary objectives of the 2045 General Plan Update because it would have the capacity to meet state housing requirements and address some community needs; however, the distributed development that may occur under this alternative would not fully address evolving community health needs or opportunities for connected growth anticipated through 2045. However, as discussed in detail in Section 6.4.2, this alternative would result in greater environmental impacts across many resource areas as the increased footprint would reduce available agricultural land and increase VMT and associated criteria pollutant and GHG emissions.

6.4.2 Impact Analysis

a. Agricultural Resources

The Greater Annexation Alternative would allow for greater overall buildout than the proposed plan by expanding the annexation area, leading to increased impacts from the conversion of agricultural land. As a result, additional agricultural lands would potentially be converted to non-agricultural uses, including additional Prime Farmland outside City limits. Similar to the 2045 General Plan

Update, the Greater Annexation Alternative would require the implementation of policies and actions of the 2045 General Plan Update which aim to reduce potential impacts related to the conversion of agricultural lands and conflicts with agricultural zoning. However, due to increased conversion of agricultural lands within the greater annexation area, impacts to agricultural resources would be greater and would remain significant and unavoidable.

b. Air Quality and Greenhouse Gas Emissions

Air Quality: Under the Greater Annexation Alternative, higher levels of growth and a more dispersed development pattern would increase vehicle miles traveled and emissions, resulting in greater impacts to air quality and greenhouse gases. Under this alternative, growth would be more widespread, thereby increasing VMT per capita and reducing potential active transportation and transit uses. As such, mobile emissions of criteria air pollutants and GHGs would increase relative to the 2045 General Plan Update. Similar to the 2045 General Plan Update, the Greater Annexation Alternative would have the potential to exceed SBCAPCD standards related to fugitive dust and criteria air pollutants. Therefore, implementation of Mitigation Measures AQGHG-1 and AQGHG-2, which aim to reduce construction-related air pollutant emissions, would be required. Although implementation would serve to reduce construction-related air pollutant emissions, air pollutant emissions under this alternative would be greater than the 2045 General Plan Update and impacts would remain significant and unavoidable.

Greenhouse Gas Emissions: The increased development potential would also increase GHG emissions and as such, the City may not achieve consistency with the statewide target of net-zero GHG emissions by 2045, and no feasible mitigation is available to reduce this impact to a less than significant level. Therefore, impacts regarding GHG emissions would be greater than the 2045 General Plan Update, and would remain significant and unavoidable.

c. Biological Resources

With additional development in new areas outside the existing City limits, the Greater Annexation Alternative would increase the likelihood of disturbing sensitive biological resources. This alternative would increase the potential for impacts to biological resources, particularly in areas that support sensitive natural communities, wetlands, and habitat for special-status species within agricultural and open space areas of the larger annexation area. However, similar to the 2045 General Plan Update, the Greater Annexation Alternative would implement policies to protect biological resources, including habitat conservation strategies and development review procedures. Additionally, this alternative would implement Mitigation Measures BIO-1(a) through BIO-1(k), which require future development to avoid, minimize, or offset impacts to sensitive species and habitats through surveys, construction buffers, habitat restoration, and compliance with agency regulations. This would reduce potentially significant impacts to a less than significant level. As such, while the Greater Annexation Alternative could result in greater biological resource impacts compared to the 2045 General Plan Update, impacts to biological resources would remain less than significant with mitigation incorporated.

d. Cultural and Tribal Cultural Resources

The expansion into previously undeveloped areas, combined with higher buildout potential, would increase the potential to affect previously undisturbed cultural and tribal resources under the Greater Annexation Alternative. As this alternative would have the potential to disturb a larger footprint and an increased area of previously undeveloped land, this alternative would result in a

greater potential to disturb previously unidentified cultural and tribal cultural resources. Similar to the 2045 General Plan Update, the Greater Annexation Alternative would implement General Plan policies to protect cultural and archaeological resources and would incorporate Mitigation Measures CUL-1 through CUL-4(b), which aim to protect archaeological and historical resources by requiring pre-construction surveys, construction monitoring, and procedures for the treatment of any resources discovered. These measures would reduce impacts to a less than significant level. The Greater Annexation Alternative would also comply with AB 52 and SB 18, and implement Mitigation Measures CUL-4(a) and CUL-4(b), which ensure tribal consultation and protection of tribal cultural resources through construction monitoring by tribal representatives and protocols for the discovery and treatment of tribal resources. As such, impacts to cultural and tribal cultural resources would be greater than the 2045 General Plan Update, but impacts to cultural resources and tribal cultural resources would remain less than significant with mitigation.

e. Hydrology and Water Quality

Under the Greater Annexation Alternative, greater development and a larger geographic footprint would introduce more impervious surfaces and infrastructure needs, contributing to greater impacts on hydrology and water quality. As a result, impacts to hydrology and water quality would increase as new development would occur within previously undeveloped areas. Similar to the 2045 General Plan Update, the Greater Annexation Alternative would result in development of open space and agricultural lands east of the City. However, under this alternative, a larger annexation area would be included, which would also increase the amount of new impervious surfaces in greenfield areas and increase potential impacts on undeveloped drainage systems and natural waterways. Similar to the 2045 General Plan Update, the larger Annexation Alternative would be required to adhere to existing NPDES permits and municipal code requirements. Additionally, the Greater Annexation Alternative would also implement policies that aim to protect groundwater supplies, groundwater recharge, and reduce impacts due to the release of pollutants from inundation. Under this alternative, as under the 2045 General Plan Update, stormwater improvements would include the extension of new drainage infrastructure systems into the larger annexation area. However, because the annexation area would be larger under this alternative, new drainage infrastructure systems would need to be extended into a larger area. New development under the Greater Annexation Alternative would still be required to comply with all federal, State, and local regulations to minimize water quality impacts and would not conflict with the Basin Plan. Therefore, impacts related to hydrology and water quality would be greater than those of the 2045 General Plan Update but would remain less than significant.

f. Noise

The Greater Annexation Alternative would result in greater noise impacts due to increased construction activity and traffic generation in areas not previously developed. As such, some new development would occur in locations further from existing sensitive receptors. Construction-related noise would have a somewhat lower impact on residences, schools, or care facilities located near development within the larger annexation area. However, this alternative would still introduce increased daytime noise levels related to construction noise in close proximity to sensitive receptors.

The Greater Annexation Alternative would implement policies aimed at reducing construction and operational noise, as well as groundborne vibration. Development facilitated by the Greater Annexation Alternative would be expected to result in similar stationary noise and groundborne

vibration levels as the 2045 General Plan Update, albeit within a larger footprint. Under this alternative, Mitigation Measures NOI-1(a) and NOI-1(b) would still be required, setting conditions of approval for all development within 500 feet of a sensitive receptor and implementing roadway vehicle noise reduction measures.

The expanded footprint under this alternative may increase traffic noise along roadways with previously minimal traffic noise, thereby increasing ambient noise levels along affected roadways. However, as details from individual development facilitated by the plan are unknown at this time, there is no feasible mitigation that would avoid or fully mitigate the increase in construction and traffic noise. As a result, potential construction noise impacts and operational traffic noise impacts would remain significant and unavoidable, similar to the 2045 General Plan Update. As under the 2045 General Plan Update, future development facilitated by the Greater Annexation Alternative would involve construction activity that could intermittently generate groundborne vibration affecting nearby properties. Because project-level details are not currently available for future individual development facilitated by the Greater Annexation Alternative, it is not possible to determine which projects may use pile driving or vibratory rollers and their exact vibration levels, locations, or time periods for construction of such projects. As a result, construction vibration levels may exceed the FTA's vibration levels for preventing architectural building damage. Similar to the 2045 General Plan Update, the Greater Annexation Alternative would require Mitigation Measure NOI-2 to reduce construction vibration impacts to a less than significant level. Therefore, overall noise impacts would be similar to those of the 2045 General Plan Update but would remain significant and unavoidable.

g. Transportation and Traffic

The higher buildout potential and more dispersed development pattern of the Greater Annexation Alternative would generate additional vehicle trips and increase roadway congestion relative to the 2045 General Plan Update. As such, under this alternative, the use of active transportation and transit may decrease as residents would be more dependent on private vehicles. The Greater Annexation Alternative development pattern would increase average trip lengths and require construction of new transit and active transportation infrastructure. As VMT and dependency on private vehicles would increase under the Greater Annexation Alternative, this alternative may conflict with the Connected 2050 RTP/SCS, the Santa Maria Active Transportation Plan, and other applicable transportation plans or policies.

Development facilitated by the Greater Annexation Alternative would be required to comply with State and City requirements related to transportation design safety and emergency access. As the Greater Annexation Alternative would increase the development footprint, per capita VMT compared to the 2045 General Plan Update may also increase, such that the City as a whole would not meet the 17 percent VMT reduction threshold required by SBCAG. Therefore, transportation impacts of the Greater Annexation Alternative would be greater than the 2045 General Plan Update and impacts would remain significant and unavoidable.

h. Utilities and Service Systems

Serving an expanded urban area and a larger population under the Greater Annexation Alternative would increase demand on utility infrastructure and require new extensions, resulting in greater impacts to service systems. New development under this alternative would result in increased demand for water supply, wastewater treatment, solid waste disposal, and other utility services. Increased demands to previously undeveloped areas and requirements to expand utility provider

service areas would also generate a need for new infrastructure extensions. Existing facilities may also still require upgrades or capacity expansions. Similar to the 2045 General Plan Update, the Greater Annexation Alternative would be subject to applicable state and local requirements and implement policies to ensure adequate public services. Therefore, while impacts would be greater than those of the 2045 General Plan Update, impacts would remain less than significant.

6.5 Environmentally Superior Alternative

CEQA requires the identification of an Environmentally Superior Alternative among the alternatives considered. When the No Project Alternative is determined to be environmentally superior, CEQA also requires identification of the Environmentally Superior Alternative among the development options. Table 6-1 indicates whether each alternative's environmental impact is greater than, less than, or similar to that of the 2045 General Plan Update for each of the issue areas studied in addition to the overall impact finding (Less than Significant, Significant and Unavoidable, etc.). Based on the alternatives evaluation in Section 6.2 through Section 6.4, Alternative 2, Infill Only Alternative would be the Environmentally Superior Alternative.

Unlike the Greater Annexation Alternative, the Infill Only Alternative would concentrate development in already developed areas of the city by increasing densities and redevelopment. As a result, the Infill Only Alternative would have reduced impacts on agricultural lands, as this alternative would not include the annexation area, thus removing the potential for development to convert agricultural lands outside of the City limits. The Infill Only Alternative would also result in reduced impacts to air quality and GHG emissions, as infill development would encourage the use of active transportation and transit uses due to the proximity of services to residential development. Additionally, compared to the Greater Annexation Alternative, the Infill Only Alternative would have reduced impacts on biological and cultural resources due to the concentration of development within previously disturbed areas that have low potential for biological resources and low potential to uncover archaeological resources. The Infill Only Alternative would have reduced per capita VMT, as development within the infill areas would reduce buildout potential to a wider area, which would reduce mobile emissions in comparison to the Greater Annexation Alternative. Due to the reduced buildout potential and reduced buildout area, impacts related to hydrology and water quality would also be reduced compared to the Greater Annexation Alternative.

Although the Infill Only Alternative would be the Environmentally Superior Alternative, this alternative would not fulfill the primary objectives of the 2045 General Plan Update, including the provision of housing quality and various housing choices or improving opportunities for connected growth. Further, the Infill Only Alternative would not enhance new and existing neighborhoods such that each neighborhood would be a Complete Neighborhood or provide innovative housing and may result in the City failing to meeting its RHNA obligations in accordance with State law as it would significantly reduce the affordable housing options and limit new housing to infill only and redevelopment.

Table 6-1 Impact Comparison of Alternatives

Issue	2045 General Plan Update Impact Classification	Alternative 1: No Project	Alternative 2: Infill Only	Alternative 3: Greater Annexation
Agricultural Resources	Significant and Unavoidable	+ Less than Significant	- Less than Significant	+ Significant and Unavoidable
Air Quality and Greenhouse Gas Emissions	Significant and Unavoidable	- Significant and Unavoidable	- Significant and Unavoidable	+ Significant and Unavoidable
Biological Resources	Less than Significant with Mitigation	+ Significant and Unavoidable	- Less than Significant with Mitigation	+ Less than Significant with Mitigation
Cultural and Tribal Cultural Resources	Less than Significant with Mitigation	+ Significant and Unavoidable	- Less than Significant with Mitigation	+ Less than Significant with Mitigation
Hydrology and Water Quality	Less than Significant	= Less than Significant	= Less than Significant	+ Less than Significant
Noise	Significant and Unavoidable	+ Significant and Unavoidable	= Significant and Unavoidable	= Significant and Unavoidable
Transportation and Traffic	Significant and Unavoidable	+ Significant and Unavoidable	- Significant and Unavoidable	+ Significant and Unavoidable
Utilities and Service Systems	Less than Significant	- Less than Significant	= Less than Significant	+ Less than Significant

+ Greater impacts compared to the 2045 General Plan Update.

- Reduced impacts compared to the 2045 General Plan Update.

= Similar impacts compared to the 2045 General Plan Update.

7.2 List of Preparers

This EIR was prepared by the City of Santa Maria, with the assistance of Rincon Consultants, Inc. Consultant staff involved in the preparation of the EIR are listed below.

Rincon Consultants, Inc.

Matt Maddox, AICP, MESM, Principal
Chris Bersbach, MESM, Project Manager
Leslie Slayday, MUP, Assistant Project Manager
Gianna Meschi, Environmental Planner
Nichole Yee, Environmental Planner
Megan Knight, Environmental Planner/Biologist
Zoe Zepp, Environmental Planner
Hannah Bireschi, Environmental Planner
Jesse McCandless, Noise Specialist
Ethan Knox, Environmental Planner
Antonia Davetas, MS, Environmental Planner
Michael Huang, Environmental Planner
Vivian Phan, MESM, GIS Analyst
Yaritza Ramirez, Publishing Specialist

Notice of Preparation and Scoping Comments

CITY OF SANTA MARIA
NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT AND SCOPING MEETING

DATE: February 18, 2025

TO: Governor's Office of Planning and Research State Clearinghouse, Responsible Agencies, Trustee Agencies, Organizations, and Interested Parties

SUBJECT: **Notice of Preparation of an Environmental Impact Report and a Scoping Meeting for the Santa Maria General Plan Update**

LEAD AGENCY:		**CONSULTANT:**	
Agency Name:	City of Santa Maria Community Development Department	**Firm Name:**	Rincon Consultants, Inc.
Street Address:	110 South Pine Street, Room 101	**Street Address:**	1530 Monterey Street, Suite D
City/State/Zip:	Santa Maria, CA 93458	**City/State/ Zip:**	San Luis Obispo, CA 93401
Contact:	Dana Eady Planning Division Manager deady@cityofsantamaria.org (805) 925-0951 ext. 2444	**Contact:**	Chris Bersbach Senior Supervising Environmental Planner cbersbach@rinconconsultants.com

Project Title: City of Santa Maria General Plan Update

The City of Santa Maria (City), as the lead agency under the California Environmental Quality Act (CEQA), is preparing an update to the Santa Maria General Plan that will guide growth and development of the city through 2045, and has determined that preparation of a programmatic EIR is necessary to evaluate potential environmental impacts of the 2045 General Plan and associated Zoning Code amendments pursuant to the California Environmental Quality Act (CEQA). The City is the CEQA Lead Agency and is requesting input on the scope of the EIR from responsible and trustee agencies, interested public agencies and organizations, and the general public (pursuant to CEQA Guidelines Section 15082).

This Notice of Preparation (NOP) provides a summary of the plan, the City's preliminary identification of the potential environmental issues to be analyzed in the programmatic EIR; and information on how to comment on the scope of the EIR. This NOP and background documents associated with the 2045 General Plan are available for review on the Santa Maria 2045 General Plan webpage at: https://www.imaginesantamaria.com/.

EIR NOP Public Comment Period: February 18 to March 19, 2025

The City requests your review and consideration of this notice and invites input and comments from interested agencies, persons, and organizations regarding the preparation of the 2045 General Plan EIR.

NOP Written Comments: Comments must be submitted via mail or email with "NOP Comments: Santa Maria 2045 General Plan EIR" in the subject line and the name and physical address of the commenter in the body of the comment to the Lead Agency Contact at the following address or e-mail by **5:00 p.m. on Wednesday, March 19, 2025**:

Dana Eady, Planning Division Manager
Community Development Department
110 South Pine Street, Suite 101
Santa Maria, California 93458
deady@cityofsantamaria.org

All comments provided should identify specific topics of environmental concern and the reason for suggesting the study of these topics in the EIR. All comments will be considered in defining the scope of the EIR in accordance with the State CEQA Guidelines. If applicable, please indicate a contact person for your agency or organization.

EIR Public Scoping Meeting: The City will hold a public EIR scoping meeting in-person to provide an opportunity for agency staff and interested members of the public to submit verbal comments on the scope of the environmental issues to be addressed in the EIR. The scoping meeting will be held on **Thursday, February 27th at 9:00 AM at Shephard Hall in the Santa Maria Library (421 S. McClelland Street, Santa Maria, California 93454).** The scoping meeting will include a brief presentation of the project to be addressed in the EIR and will provide attendees with an opportunity to provide input on the scope of the EIR.

Plan Location: The Santa Maria 2045 General Plan encompasses the entirety of the City of Santa Maria and its Sphere of Influence. Figure 1 in the Plan Description (Attachment 1) below shows the regional location and Figure 2 shows the Santa Maria 2045 General Plan boundary.

Proposed Plan: The 2045 General Plan would serve as a long-term framework for future growth, reflect issues identified from community input and changes in State law, and update all elements of the General Plan including the Land Use Element, Circulation Element, Safety Element, Environmental Justice Element, Conservation and Open Space Element, Noise Element, Public Facilities and Services Element, Recreation and Parks Element, and Economic Development Element. The update to the General Plan would include, but is not limited to, revisions to policies, narratives, data, and figures to reflect the new buildout period. The Zoning Code would also be amended to ensure consistency with the General Plan.

EIR Environmental Impact Areas: The EIR will provide a programmatic evaluation of potential environmental impacts of the plan. The EIR also will evaluate the cumulative impacts of the plan when considered in conjunction with other related past, present, and reasonably foreseeable future projects. The City anticipates that the plan could result in potentially significant environmental impacts with regard to the following topic areas, which will be further evaluated in the EIR.

- Agricultural Resources
- Air Quality and Greenhouse Gas Emissions
- Biological Resources
- Cultural and Tribal Cultural Resources
- Hydrology and Water Quality
- Noise
- Public Services and Recreation
- Transportation
- Utilities and Service Systems

EIR Plan Alternatives: The EIR will also evaluate a reasonable range of plan alternatives that could reduce or avoid potential environmental effects identified in the EIR, including a required "No Plan" Alternative.

When the Draft EIR is completed, it will be available for review at the City's offices located 110 South Pine Street, Suite 101, Santa Maria, California 93458 and online at: https://www.imaginesantamaria.com/. The City will issue a Notice of Completion and Notice of Availability of a Draft EIR at that time to inform the public and interested agencies, groups, and individuals regarding how to access the Draft EIR and provide comments. Additional information about the proposed plan can be accessed at the https://www.imaginesantamaria.com/ webpage and the City website at https://www.cityofsantamaria.org/.

If you have questions regarding this NOP or the EIR public scoping meeting, please contact Dana Eady, Planning Division Manager at (805) 925-0951 or via email at Deady@cityofsantamaria.org.

Dana Eady

Dana Eady, Planning Division Manager

February 17, 2025

Date

Attachment 1 – Plan Description

Attachment 1 - Plan Description

The plan analyzed in this Environmental Impact Report (EIR) is the City of Santa Maria (City) 2045 General Plan Update, hereafter referred to as the "plan." This section of the EIR describes the key characteristics of the plan, including the plan proponent/lead agency, the geographic extent of the plan, plan objectives, required approvals, and the development forecasted by the plan.

Plan Purpose

The plan is an update to the City's current General Plan, which includes the following chapters: Land Use Element, Circulation Element, Safety Element, Health and Environmental Justice Element, Conservation and Open Space Element, Noise Element, Public Facilities and Services Element, Recreation and Parks Element, and Economic Development Element. The plan establishes the City's vision for future development through the horizon year of 2045. The plan will serve as the City's primary guide for future land use and development decisions in a way that meets the community needs and priorities while serving as a key tool for influencing and improving the quality of life for residents and businesses. As such, it serves as the "blueprint" for future development and conservation of a community. The 2045 General Plan Update will help the City plan for important community issues, such as community growth; housing, mobility, and infrastructure needs; climate change; and environmental protection. It will also set the stage for future social, physical, and economic development of the city.

Plan Proponent/Lead Agency

The City of Santa Maria is both the plan proponent and the lead agency for the proposed plan. The City's Community Development Department (located at 110 South Pine Street, Suite 101, Santa Maria, California 93458) prepared this EIR with the assistance of Rincon Consultants, Inc. and Raimi + Associates.

Plan Area Location and Environmental Setting

Regional Location

The City of Santa Maria is located in northern Santa Barbara County, surrounded by the hills of the Santa Maria River Valley (see Figure 1). The General Plan area involves all land within the Santa Maria Sphere of Influence[1] (SOI) and includes the annexation of areas east of the city limits (see Figure 2). The City of Santa Maria is generally bound by the Santa Maria River to the north, agricultural lands to the east and west, and the unincorporated town of Orcutt to the south.

[1] The term "sphere of influence" applies to the area designated by the Santa Barbara Local Agency Formation Commission (LAFCO) as the probable, future physical boundary or service area of the city. Overall, planning decisions made for the city are assumed to have a bearing on growth and development in these unincorporated adjacent areas. Areas not included as part of the annexation for the 2045 General Plan will continue to be deferred to the County land use designations and regulations in the SOI. Any development or change that happens in the SOI during the lifetime of the General Plan will occur under the jurisdiction of the County. Therefore, this EIR does not evaluate impacts resulting from future growth within the SOI, outside of the proposed annexation, as part of the proposed plan. However, where relevant, this EIR does evaluate potential impacts resulting from future growth within the city limits to lands within the SOI. The SOI is also included in the cumulative setting for this EIR.

Figure 1 Regional Location

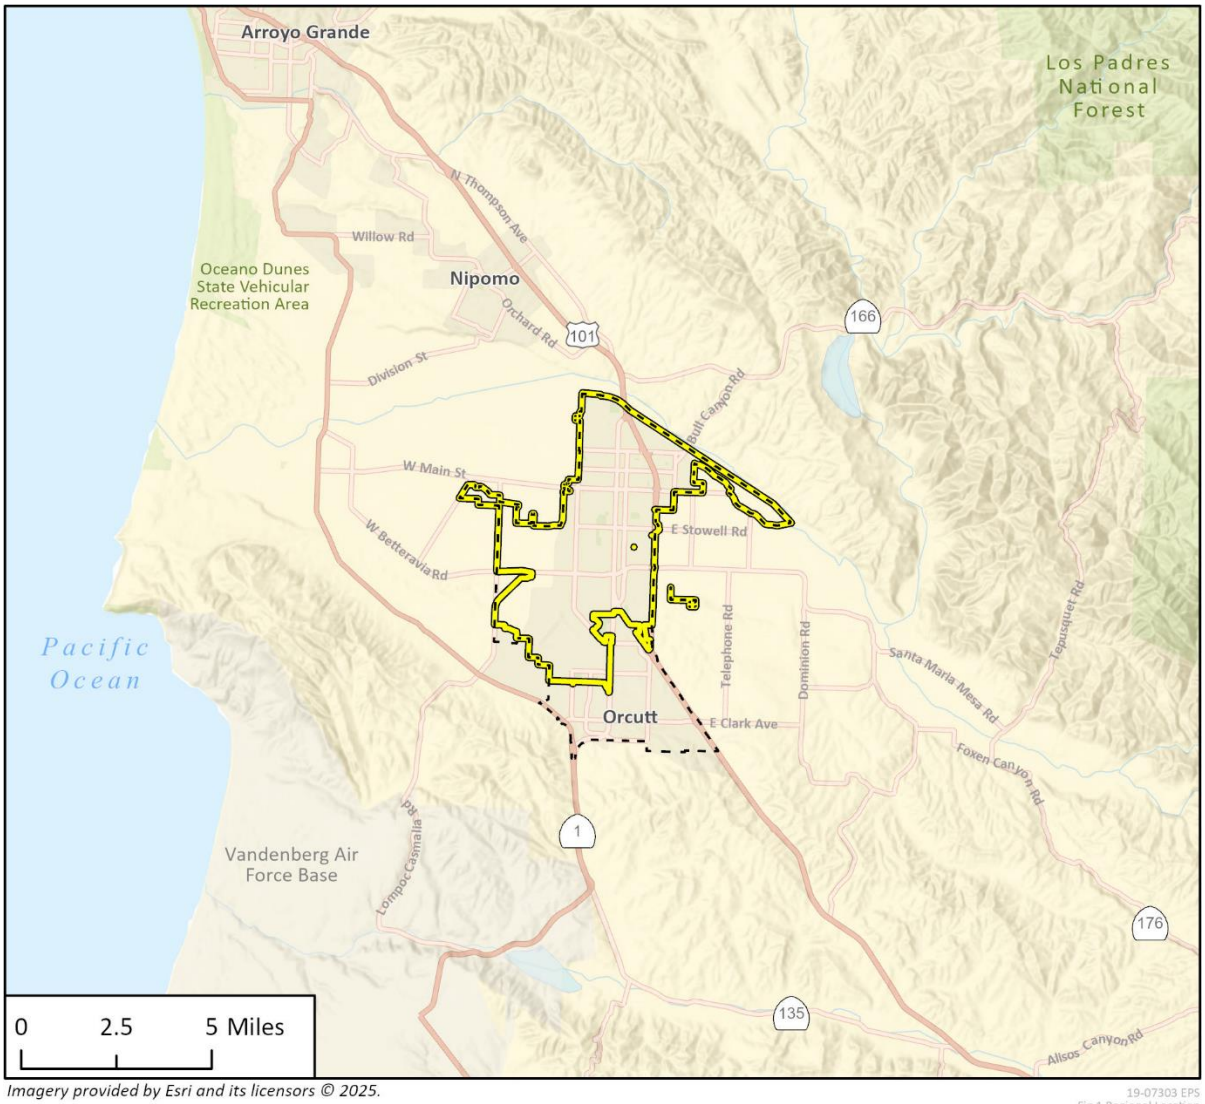

Figure 2 Plan Area Location

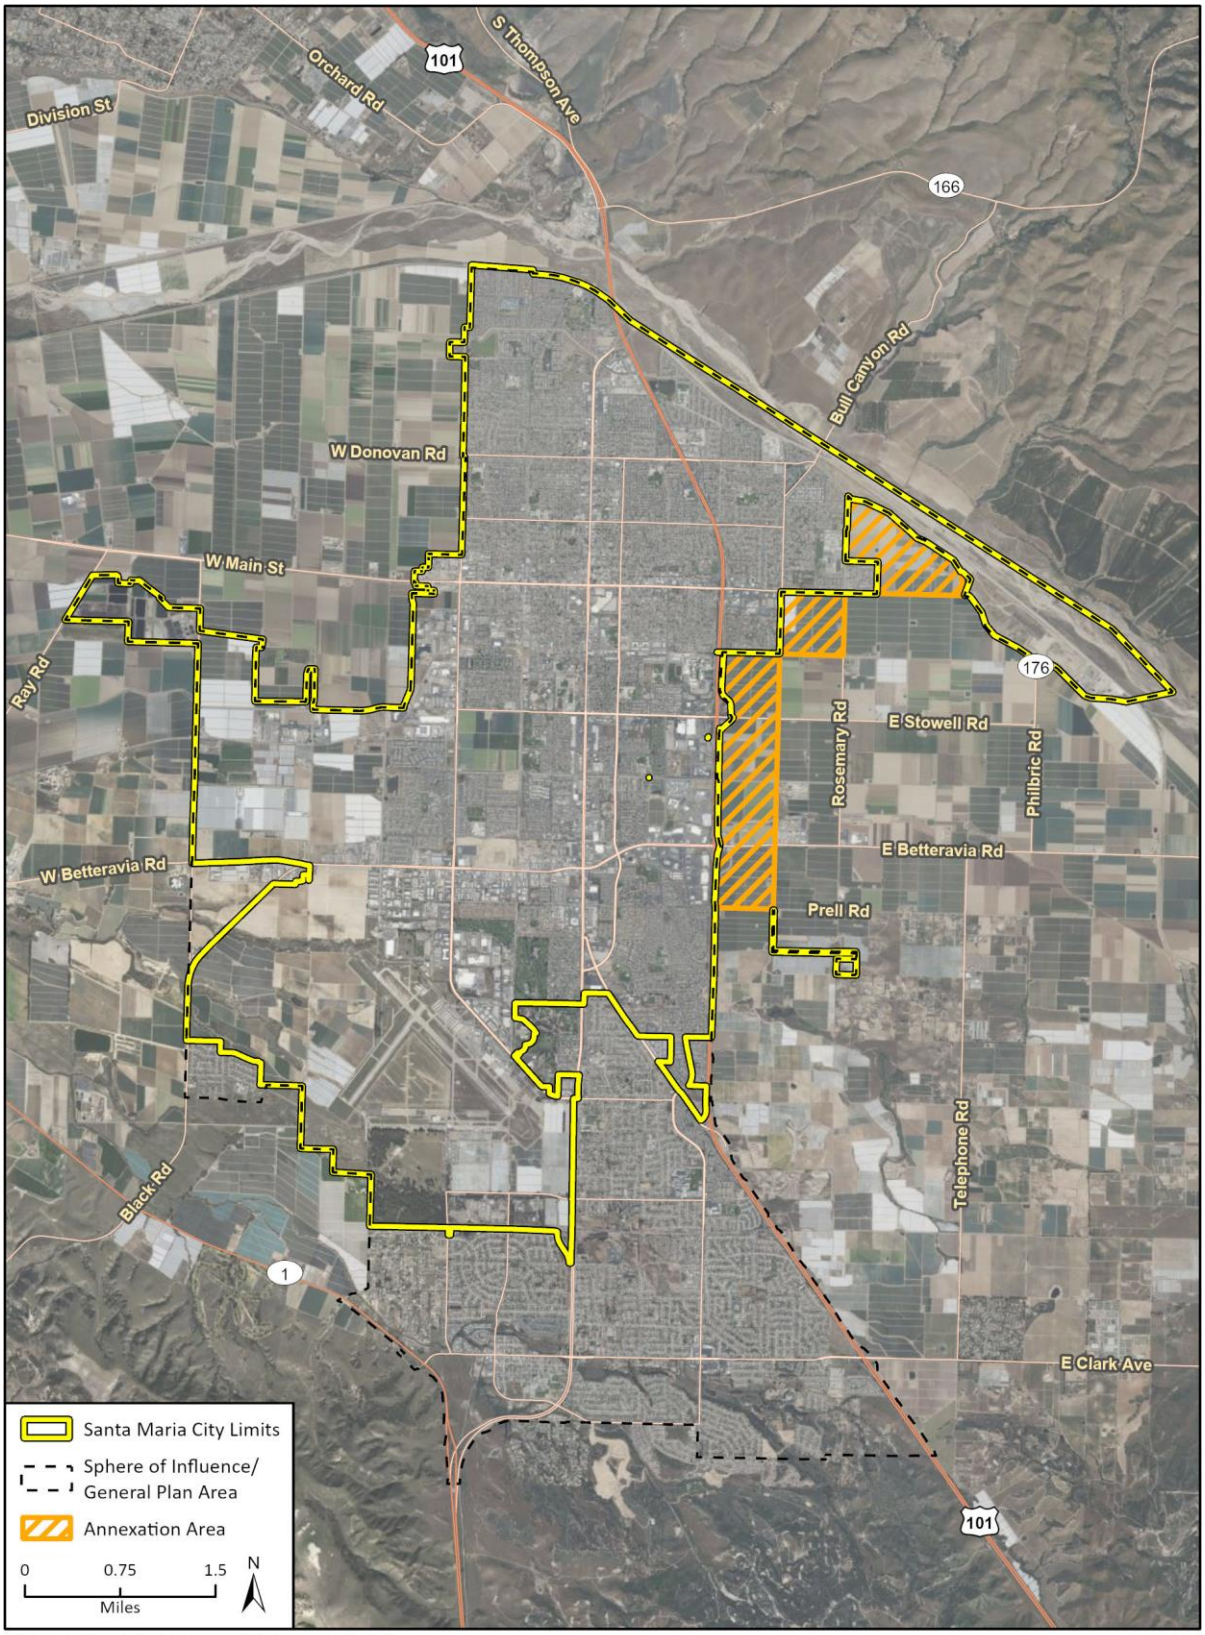

Imagery provided by Microsoft Bing and its licensors © 2024.

19-07303 EPS
Fig 2 Project Location

U.S. Highway 101 (U.S. 101) forms the eastern edge of the city. A linear portion of Santa Maria is also located to the west of U.S. 101. This portion of the city extends south from Vineyard Trail Road then extends east along an internal farm road. Santa Maria is located approximately 25 miles south of San Luis Obispo, 50 miles northwest of Santa Barbara, 250 miles south of San Francisco and 170 miles north of Los Angeles.

Principal regional transportation facilities serving Santa Maria are U.S. 101, State Route 135 (SR 135), State Route 166 (SR 166), and the Santa Maria Valley Airport. Regional transit is provided by Clean Air Express and the San Luis Obispo Regional Transit Authority. Regional rail is provided by Amtrak.

Local Setting

The City of Santa Maria is characterized as a suburban residential community. The plan area covers approximately 17,200 acres within the city limits and approximately 4,500 acres within the SOI (City of Santa Maria 2020). Approximately 27 percent of land within Santa Maria is occupied with residential uses, primarily consisting of single-family residences (22 percent). Agricultural uses occupy 14 percent of the city, airport uses occupy 11 percent, public and institutional uses occupy 8 percent, and commercial uses occupy 7 percent. Approximately 19 percent of the city is comprised of vacant land. Residential land uses are distributed throughout the city. Non-residential land uses, including industrial and commercial, commonly line major corridors in Santa Maria, including Broadway, Main Street, and Betteravia Road. Agricultural and vacant uses are located at the periphery of the city. The city is underlain by the Santa Maria River Valley Groundwater Subbasin. The local climate in Santa Maria is identified as a Mediterranean climate characterized by warm, dry summers and cool, moist winters.

Existing Plan Area Characteristics

The 2045 Santa Maria General Plan area covers approximately 17,200 acres, which includes 12,700 acres within the city limits and 4,500 acres within the Sphere of Influence (SOI). Approximately 110,608 people live within the General Plan area as of January 2024, resulting in population density of approximately 640 people per square mile. There are 34,412 residential units within the General Plan area as of 2024 (California Department of Finance 2024).

The annexation area evaluated in the plan (discussed in detail in Section **Error! Reference source n ot found.**) covers 985 acres east of the City of Santa Maria's limits.

Regulatory Setting

State law (Government Code Sections 65300 through 65303.4) requires each municipality to adopt and periodically update its General Plan, and requires that a General Plan include the following mandatory subject areas, or "elements": Land Use, Circulation, Housing, Open Space, Conservation, Noise, Safety, and Environmental Justice. Municipalities may also prepare optional elements that can be organized or combined at the municipality's discretion.

The 2045 General Plan has been organized into the following elements: Land Use; Circulation; Safety, Health and Environmental Justice; Conservation and Open Space; Noise; Public Facilities and Services; Recreation and Parks Element; and Economic Development.[2] Together, these elements

[2] General Plan element titles and organization of required content in the General Plan is currently in draft status and subject to change.

cover all topics required to be included in a General Plan under State law. The City of Santa Maria City Council adopted the 6th Cycle Housing Element on December 5, 2023. The 2045 General Plan may require additional updates to the adopted Housing Element, although such updates are anticipated to be for consistency with the 2045 General Plan.

Under State law a property's zoning is required to be consistent with its General Plan land use designation (Government Code Section 65860). Section 65860(c) of the Government Code requires that when a General Plan is amended or updated in a way that makes the Zoning Ordinance inconsistent with the General Plan, "the zoning ordinance shall be amended within a reasonable time so that it is consistent with the general plan as amended."

Plan Objectives

The 2045 General Plan will serve as a long-term framework for future growth and development, represents the community's view of its future, and contains the goals and policies upon with the City Council, Planning Commission, and the entire community will base land use and resource decisions. The 2045 General Plan will provide a contemporary plan that will guide Santa Maria though the next 20 years. The primary objective of this plan is to update the existing Santa Maria General Plan in order for it to be compliant with State law.

The 2045 General Plan would implement the following vision to guide development.

Vision. Santa Maria in 2045 is a community where families can establish and maintain multi-generational roots. It is close-knit, culturally diverse, and economically inclusive. This is possible, in part, because Santa Maria offers affordable, safe, attractive, and healthy homes and neighborhoods for all residents. This is also possible because of the availability of high-quality education, jobs, and economic opportunity. Building from a strong foundation in the agricultural, retail, healthcare, and business services industries, Santa Maria has continued to diversify by expanding the training and skills of residents and by adapting to new technologies and broader economic trends. People are proud of their history and heritage. This is reflected in the diverse, well-preserved historical resources and the attractive, inviting streets and public gathering places. Museums, art venues, a strong civic sector, and the many welcoming community events and celebrations are all evidence of a vibrant local culture. Residents have convenient access on foot and by car, bus, and bicycle to jobs, schools, community amenities like parks and sports fields, and the region's natural environment. Public services are reliable, inclusive, and efficient, and the community is well-served by equitable, modern, and sustainable infrastructure, facilities, and utilities.

The City identifies the following 11 guiding principles, which also serve as the proposed plan objectives for the purposes of complying with CEQA.

- **Agricultural Identity.** Continue to support the agricultural industry and its workforce. Balance the protection of prime agricultural land with the development necessary to support continued population growth and the diversification of the local economy.
- **Culture, History, and Art.** Celebrate and share Santa Maria's multicultural heritage and contemporary diversity. Preserve historic resources, foster the arts, maintain a strong sense of community through cultural festivals, and invite visitors to enjoy the richness of local expression and resources.
- **Community Design.** Create public spaces that reflect the community identity, foster civic pride, and invite community members to gather, both informally and for events. Design streets, buildings, and landscaping that reflect the community's history, culture, and natural

environment. Use lighting, street trees, benches, and other amenities to make sidewalks and public spaces safe and welcoming, with a focus on the Downtown and along the Main and Broadway corridors.

- **Community Health.** Grow and expand physical and mental healthcare services to meet the needs of all residents. Improve community health by addressing the environmental justice priorities of disadvantaged communities, including seniors, low-income households, linguistically isolated families, the homeless, and youth, who comprise 35 percent of residents. Minimize residents' potential for exposure to noise, pesticides, and industrial pollution. Foster healthy lifestyles by expanding safe and attractive options for physical activity and by expanding healthy food access.
- **Natural Environment and Resilience.** Conserve water resources in the city and support efforts to maintain the Santa Maria River. Expand opportunities to enjoy the area's natural resources and the region's beauty. Safeguard the community from natural hazards, including those exacerbated by climate change.
- **Housing Quality and Choice.** Develop a high-quality and diverse housing supply at all levels of affordability that preserves Santa Maria as a place where families can establish roots and today's youth can afford to stay. Balance the growth of housing and the economy so that people can live and work in Santa Maria. As new housing types are introduced, (e.g., accessory dwelling units (ADUs)), adapt parking, transportation, and other community features. Develop workforce housing solutions that provide safe, healthy, and comfortable homes for workers and their families.
- **Resilient Economy.** Cultivate a diverse and resilient economy in which local businesses and families thrive and job growth keeps apace with housing development. Grow the existing economic base in agriculture, retail, healthcare, and business services, and expand into new industries. Ensure access to high quality education that is aligned with local industries and entrepreneurship.
- **Connected Growth.** To accommodate projected population, housing, and jobs growth, focus on improvements to existing neighborhoods along with infill and vacant site development. Expand beyond current city limits when needed, weighing the short and long term environmental, economic, infrastructure, public service, and fiscal trade-offs. Establish strong cultural, design, and physical connections between newly developed areas and the rest of Santa Maria.
- **Transportation Innovations.** Develop a balanced, equitable, affordable, and reliable transportation network where pedestrians, cyclists, trucks, cars, rail, and transit can safely and efficiently navigate to destinations within Santa Maria. Focus on maintaining existing roadways, expanding walking and biking options, and reducing congestion and maintenance costs. Transform corridors and streets from points of conflict among people, cyclists, cars, and trucks into places that bring neighborhoods and families together. Prepare for and expand regional connections with enhanced bus, rail, and air service. Prepare for technological advances like autonomous vehicles and remote work, and take advantage of opportunities and incentives to reduce vehicle miles traveled (VMT) and greenhouse gas (GHG) emissions.
- **Infrastructure, Utilities, Facilities, and Services**. Provide residents and businesses with equitable access to affordable, reliable, and sustainable infrastructure and utilities, including water, wastewater, flood control, gas, phone, cable, and broadband internet. Deliver high-quality services and facilities for all community members, including expedient emergency response, accessible health care, high-quality education and career training, and convenient and equitable access to well-maintained parks and recreational facilities.

- **Governance and Engagement.** Continue to conduct and increase meaningful and inclusive civic engagement that empowers a diversity of perspectives in public decision-making. Provide residents and businesses with high-quality, equitable, and accessible customer service, including City communications and events in multiple languages and interpretation services. Partner with community organizations and institutions to build trust and increase participation, including among youth, who will be the City leaders in 2045.

Plan Characteristics

2045 General Plan Update Organization

The elements included in the 2045 General Plan are further described in this section.

- **Conservation and Open Space Element.** This element outlines the development, management, and preservation of natural, tribal, cultural, and historic resources within the plan area. Goals, policies, and actions within this element address climate change adaptation and resilience in relation to natural resources, greenhouse gas emissions reduction, urban forestry, and the use of open space for the conservation of natural, cultural, and other resources as well as for hazard mitigation.
- **Safety Element.** This element addresses natural and manmade safety hazards in Santa Maria, including geologic and seismic hazards, fire hazards, flooding, hazardous materials, and emergency response and establishes policies and actions to mitigate hazard impacts to people and property. The Safety Element also evaluates evacuation capacity under a range of hazard scenarios, identifies single-access neighborhoods, and establishes policies and actions to enhance evacuation capacity throughout the city, consistent with Assembly Bill (AB) 747 and Senate Bill (SB) 99. In accordance with SB 379, this element also includes a climate change vulnerability assessment and measures to address climate vulnerabilities and hazard mitigation and emergency response.
- **Land Use.** This element designates the placement and distribution of future development to facilitate orderly growth within the city. This element establishes future land use patterns and specifies appropriate residential density and development intensity. Goals and policies serve as a guide for decision makers to direct the development of the city. Additionally, this element provides an overall design framework for the city with the goal of preserving community character and highlighting community gateways and views.
- **Circulation.** This element provides a framework for the City's multimodal transportation network, addressing the movement of people and goods in and around Santa Maria, while ensuring the orderly improvement of the circulation system in response to the Land Use Element. This element also establishes policies related to the electrification of vehicles and commercial enterprises promoting Mobility as a Service (MaaS), complete streets (AB 1358) and VMT (SB 743).
- **Public Facilities and Services Element.** This element evaluates existing and future conditions related to the provision and maintenance of public buildings and services, including parks, schools, libraries, police, fire, and water, wastewater, and stormwater infrastructure. This element presents goals, policies, and actions related to public facilities and services in order to sustain existing households and businesses and accommodate future growth in population, employment, and development.

- **Recreation and Parks Element.** This element inventories existing park and recreational resources throughout the city and evaluates future conditions and needs related to parks and recreation. Goals, policies, and actions within this element aim to facilitate equitable distribution of resources and investments to meet the recreational needs of all community members.
- **Economic Development Element.** This element includes goals, policies, and actions related to the retention and expansion of existing business sectors, as well as diversifying the economy to develop new kinds of businesses in Santa Maria.
- **Noise Element.** This element identifies and evaluates sources of noise and groundborne vibration and aims to minimize excessive noise exposure and noise conflicts. This element would be consistent with the Santa Maria Public Airport Master Plan and include new noise contours.
- **Health and Environmental Justice Element.** This element identifies disadvantaged communities within the city and includes goals, policies, and actions to reduce pollution exposure, promote access to food, public facilities, and safe housing, and strengthen civic engagement in City planning and decision making.

The City recently updated its Housing Element, which was adopted on December 5, 2023. The Housing Element provides the City's action plan for meeting the City's 6th Cycle Regional Housing Needs Allocation (RHNA) of 5,418 dwelling units for the 6th Cycle Housing Element (2023 to 2031). The Housing Element has undergone separate CEQA review and for that reason is not part of the plan being evaluated in this EIR. The Housing Element and Initial Study – Mitigated Negative Declaration were adopted on December 5, 2023.

Land Use Designations

The current Santa Maria General Plan Land Use Element establishes 30 separate land use designations to provide a mixture of land uses for the City. The existing City of Santa Maria Land Use Designations Map is shown in Figure 3.

The plan would change some of the land use designations; including planned land use changes that resolve inconsistencies between existing uses and the General Plan land use designations. Land use conflicts primarily consist of industrial, heavy commercial, agricultural, and airport uses in proximity to residential uses. In addition, the plan includes the following land use designation changes:

- Revise the High Density Residential (HDR) land use designation to increase the maximum allowed density from 22 dwelling units/acre to 30 dwelling units/acre.
- Eliminate the Medium Density Residential-10 (MDR-10) land use designation and reassign all parcels currently designated MDR-10 to MDR-12, which would have an allowed density of 12 dwelling units/acre.
- Add two new land use designations, Downtown Specific Plan (SP) and Planned Annexation (PA).

Land use changes for the proposed annexation areas east of the city limits (the planned annexation areas are discussed in detail in the Annexation subsection that follows. Figure 4 shows the changes in land use designations compared to the current General Plan. Proposed changes from the existing General Plan land use pattern include the following:

- A parcel along North Broadway from Low Density Residential and Community Commercial to Community Facilities (CF);
- Parcels along Main Street from Community Commercial to Main Mixed Use (MMU);

Figure 3 Existing Land Use Designations within the City of Santa Maria

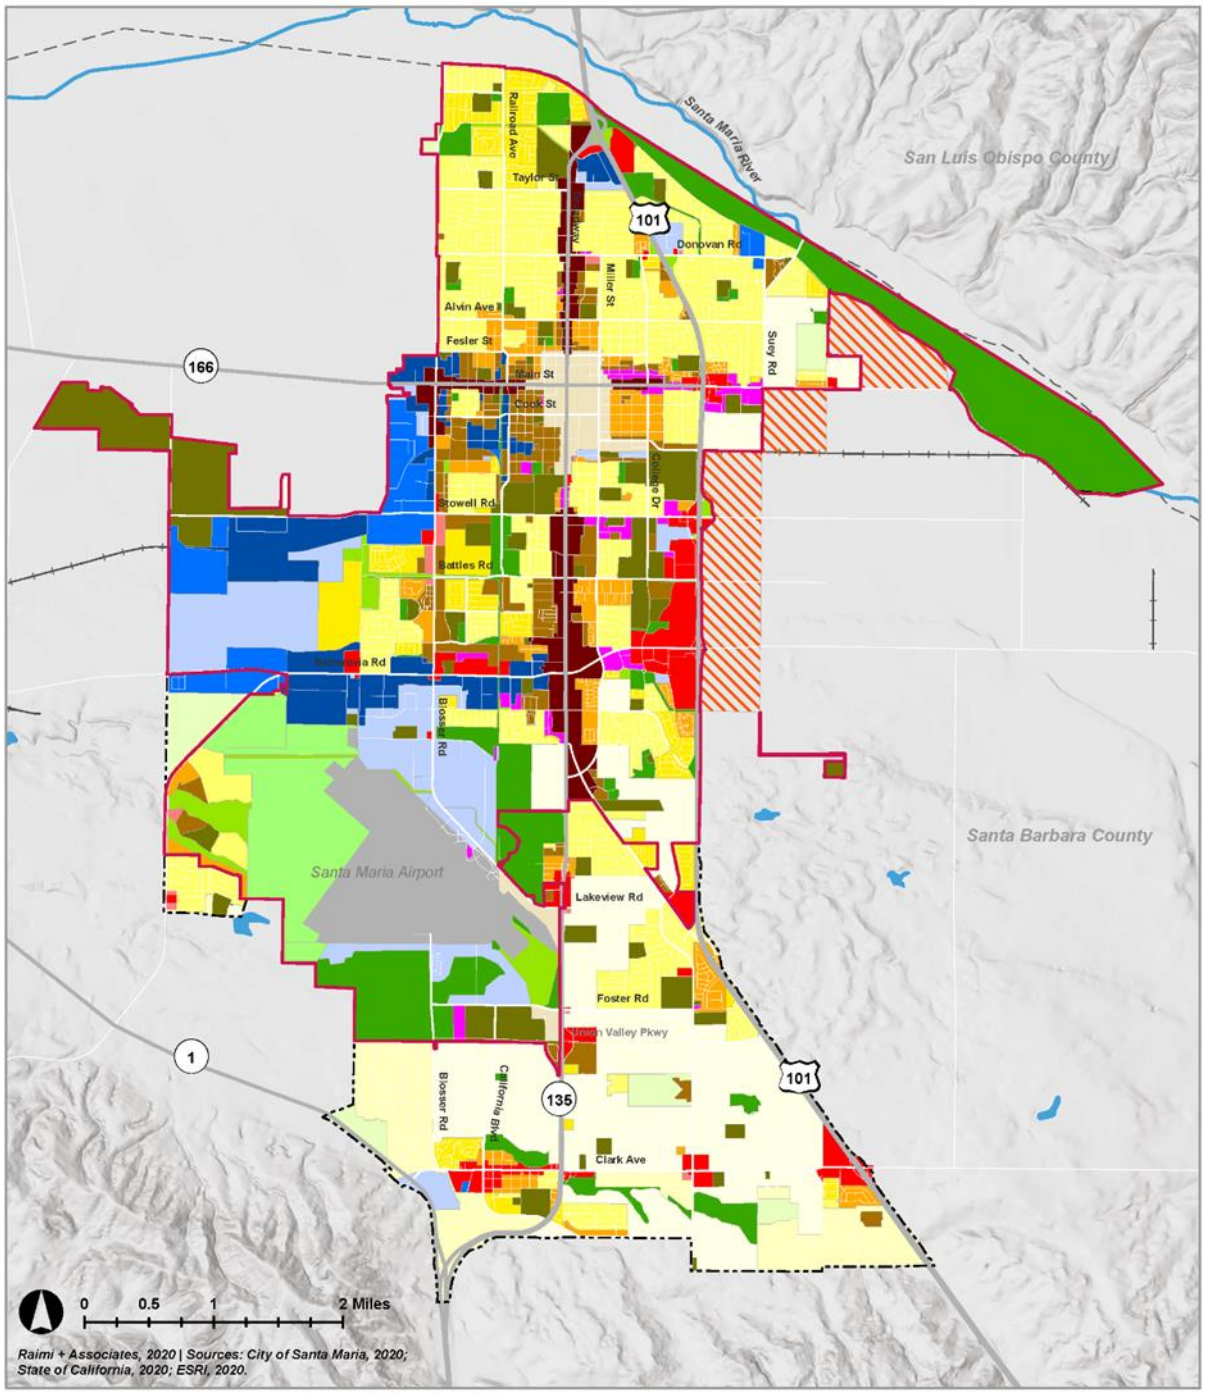
Fig X Existing Land Use

Figure 4 Proposed Land Use Changes



Santa Maria General Plan imagine

General Plan Land Use

- Santa Maria City Limits
- Sphere of Influence
- County Boundaries
- Railroads
- Santa Maria River
- Water
- Residential Agricultural (RA) or Very Low Density (VLDR)
- Lower-Density Residential (LWDR)
- Low-Density Residential (LDR)
- Low-Medium Density Residential (LMDR)
- Medium Density Residential (MDR)
- High Density Residential (HDR)
- Corridor Mixed Use (CMU)
- Neighborhood Commercial (NC)
- Community Commercial (CC)
- Commercial/Professional Office (CPO)
- Light Industrial (LI)
- General Industrial (GI)
- Heavy Commercial/Manufacturing (HCM)
- Airport Service (AS)
- Primary Agricultural Open Space (AOS-1)
- Secondary Agricultural Open Space (AOS-2)
- Conservation Open Space (COS)
- Recreational Open Space (ROS)
- Community Facilities (CF)
- Specific Plan (SP)
- Planned Annexation (PA)

- Parcels along Broadway from Community Commercial to Broadway Mixed Use (BMU); and
- Allow Low Density Residential in Area 9 along A Stret in the western portion of the city.

Changes in land use designations within the General Plan would also necessitate revisions to the following Specific Plans:

- Amend the Entrada Specific Plan to reflect the new Broadway and Main Mixed Use land use designations.
- Amend the Area 9 Specific Plan to allow low density residential uses along A Street, consistent with the LMDR-8 designation.

Annexation

The 2045 General Plan would include the annexation of areas east of the city limits and SOI. There are three separate areas (shown in Figure 5) that would be included as part of the proposed annexation ("annexation area") that would total 985 acres.

The first area proposed for annexation is generally bound by Panther Drive to the west, E. Main Street to the south, and the city limits to the north and east. The second area proposed for annexation is generally bound by S. Suey Road to the west, E. Main Street to the north, E. Jones Street to the south, and Rosemary Road to the east. The third area proposed for annexation is generally bound by E. Jones Street to the north, U.S. 101 to the west, Vineyard Trail Road to the south, and Rosemary Road to the east. Much of the annexation area is vacant or agricultural land.

Existing zoning and land use designations within the annexation area are determined by the County of Santa Barbara and consist primarily of agricultural land use designations (Agriculture II with a minimum lot size of 100 acres [AG-II-100] and Agriculture II with a minimum lot size of 40 acres [AG-II-40]). Land use changes for the annexation area would include the establishment of a new land use designation, Planned Annexation, which would allow for a mix of commercial, residential, industrial, and public land uses in annexed land outside of current city limits.

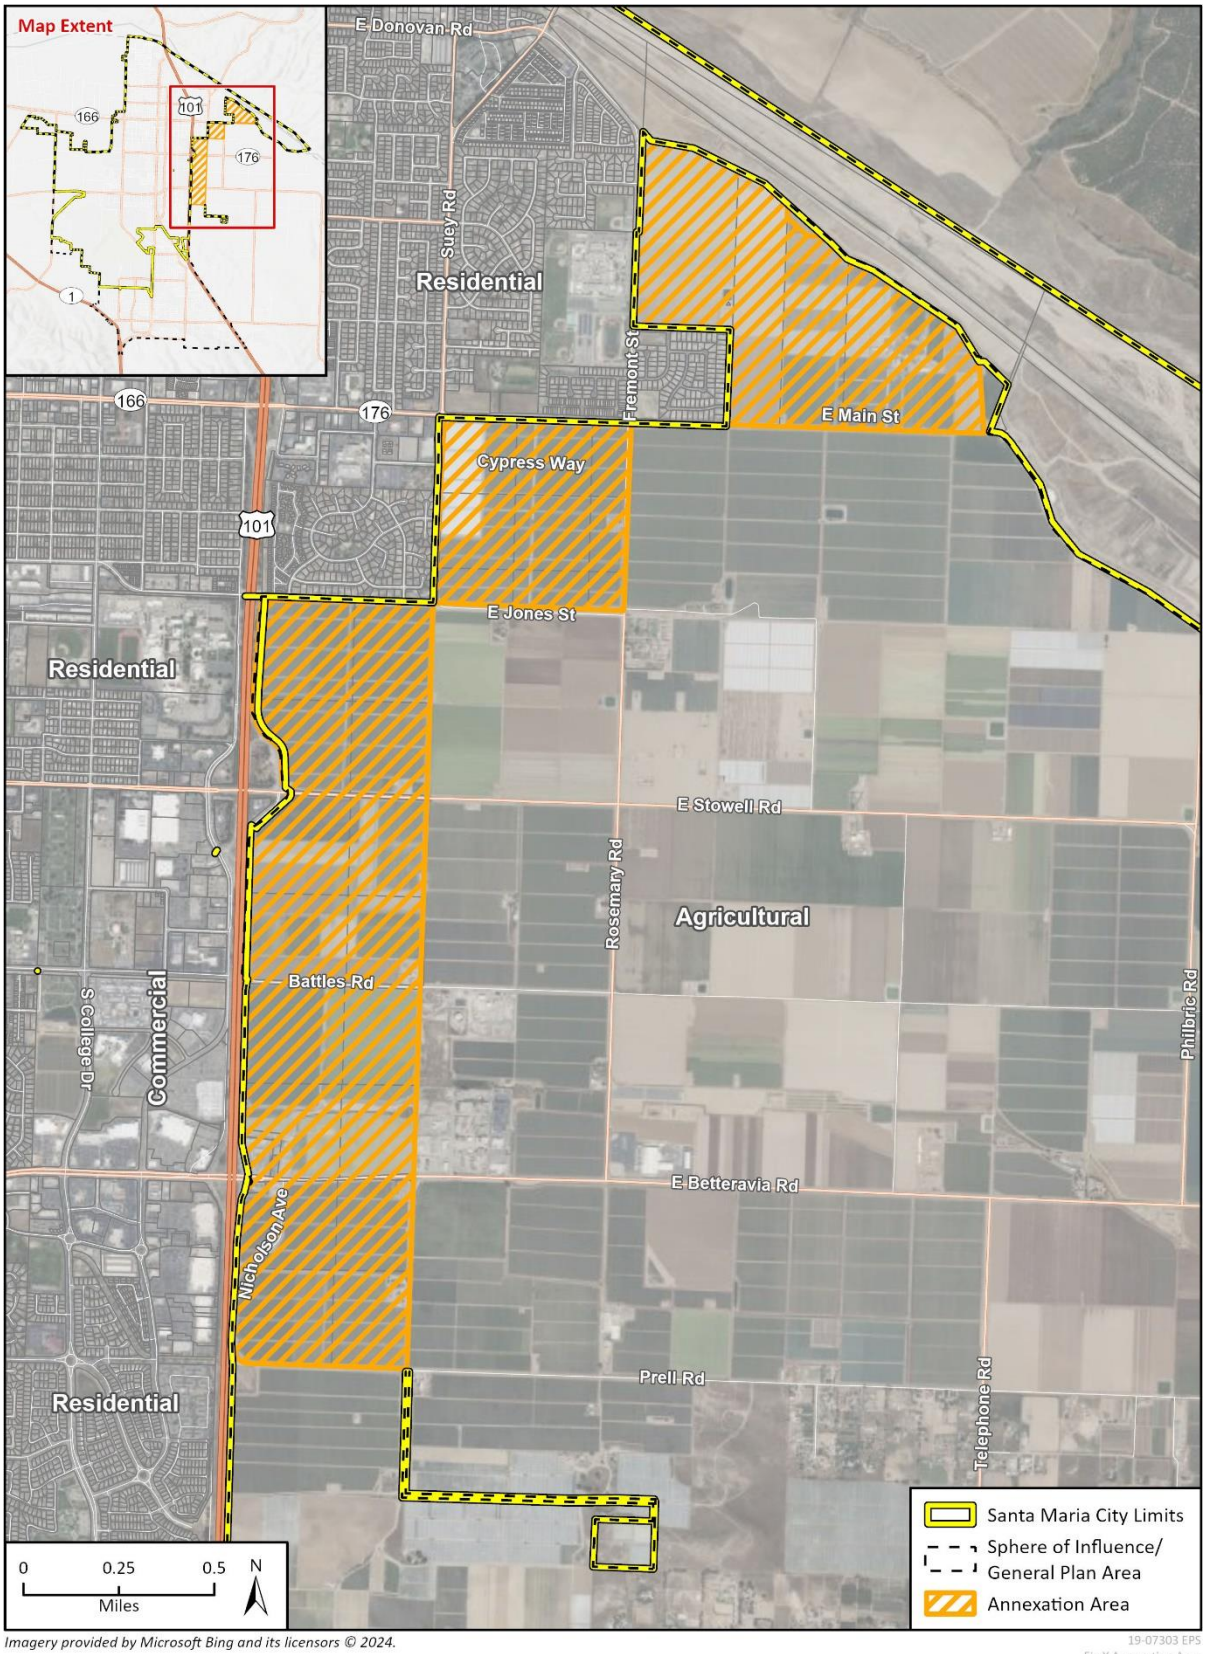
Noise Contour Revisions

The City of Santa Maria noise characteristics are described within the 2045 General Plan Noise Element including descriptions of common sources of noise as well as goals and policies to lessen noise for sensitive land uses (e.g., residences, schools, medical facilities). As required pursuant to the Governor's Office of Planning and Research (OPR) Guidelines, the Noise Element also includes a map of noise contours as depicted via lines that represent equal levels of noise exposure across the city. Noise contours information informs planning decisions, including siting of potential future sensitive land uses.

Proposed 2045 General Plan Buildout

For reasonable analysis purposes in this EIR, the City assumes maximum 2045 General Plan buildout (of both residential and non-residential uses) within the city would occur by 2045. Maximum buildout of the General Plan is assumed to be a locally appropriate projection of development within the plan area based on updated land use designations and the proposed annexation rather than development of every parcel within the city. While complete buildout is not likely to occur by 2045, the maximum buildout assumption represents the most conservative approach to evaluating the plans potential environmental effects and satisfying the requirements of the CEQA Guidelines.

Figure 5 Proposed 2045 General Plan Annexation Area



Imagery provided by Microsoft Bing and its licensors © 2024.

19-07303 EPS
Fig X Annexation Area

For the purposes of this EIR, "General Plan Area" would refer to the City of Santa Maria, the proposed annexation area, and the Sphere of Influence.

Table 1 indicates the net change from 2022 conditions in Santa Maria to maximum buildout of the plan by 2045.

Table 1 Existing and Proposed Plan Land Uses Components Summary

	Existing (2022)	Proposed (2045)	Net Change from Existing to Proposed
Acreage within City Limits	15,058 acres	985 acres	16,043 acres
Residential Units	28,200 units	44,340 units	16,140 units
Jobs	43,050 jobs	66,800 jobs	23,750 jobs

The 2045 General Plan would add 985 acres of land to the city limits and would provide the framework for development of up to 16,140 net new[3] primary and accessory dwelling residential units, including the development of 1,300 accessory dwelling units (ADUs).

The 2045 General Plan would provide the framework for development of up to 1,504 net new non-residential acres, with the following composition (numbers in parentheses indicate a reduction in acreage):

- (463) acres of commercial uses
- 452 acres of mixed uses
- 7 acres of Industrial/airport uses
- 33 acres of public and open space
- 1,012 acres of planned future development (specific plan and planned annexation areas)

Approximately 32 percent of the city remains undeveloped. The undeveloped areas of the city are classified as vacant (19 percent) and agricultural (13 percent). The existing General Plan indicates that 43 percent of the land is classified Open Space, and the remaining 32 percent is classified as industrial. Many of the vacant parcels within the city, clustered between Battles Road, Betteravia Road, and U.S. 101 are either already slated for development or are located within a Specific Plan.

Specific land use designations proposed for the 2045 General Plan area are designed to ensure consistency with the updated Housing Element and existing land uses, such as industrial, heavy commercial, or agricultural. These land use changes would allow for increased residential density along Main Street and Broadway, as well as on opportunity sites with a high potential for redevelopment. Areas of the city with the most potential for change are concentrated in Downtown, neighborhoods in the City Core, Main Street and Broadway, Southwest Neighborhoods (northwest, west, and south of the airport), and areas proposed for annexation. The 2045 General Plan serves as the City's long-term development blueprint through 2045, contains goals and policies guiding land use and infrastructure decisions through 2045, and brings the General Plan up to date in response to latest State and regional plans and regulations related to climate-related hazards,[4] emergency evacuation routes and access, water supply, and mobility.

[3] Net new means the change from City of Santa Maria existing (2024) development to full buildout of the proposed plan (i.e., 2045 General Plan) by 2045; this EIR analyzes the net change in terms of potential physical environmental impacts.
[4] Pursuant to SB 379, which amended California Government Code Section 65302.

Intended Use of this EIR

This EIR provides a programmatic environmental review of implementing the City's 2045 General Plan Update. Subsequent activities falling under the City's 2045 General Plan Update will utilize this EIR to focus the environmental review of these consequent activities and to determine their effects. If a new project is proposed that is not anticipated by the 2045 General Plan Update, or that may result in project-level environmental effects not addressed in this program-level EIR, the future project would be evaluated as required under CEQA. This EIR is not intended to prohibit consideration of future projects or CEQA analysis of future projects.

Plan Implementation

Following adoption of the 2045 General Plan Update by the City Council, all subsequent activities and development within the City would be guided by the goals and policies in the 2045 General Plan Update. Therefore, the 2045 General Plan provides specific policy guidance for implementation of plan concepts. The City would also need to coordinate with Santa Barbara County, the Santa Barbara Local Agency Formation Commission (LAFCO), and other public agencies to implement policies that affect their respective jurisdictions, or would affect the region. Implementing these policies in accordance with new development (residential, commercial, or industrial) would be subject to the City's established review and approval processes, with final review and approval by the appropriate departmental staff, as well as the appointed and elected officials. The principal responsibilities that City officials and staff have for plan implementation are briefly summarized below:

- Updating the City of Santa Maria Zoning Ordinance to achieve consistency with the adopted General Plan Update.
- Rezoning properties, as dictated by future development proposals.
- Approval of tentative maps, variances, planned development and conditional use permits, and other land use permits and entitlements.
- Approval of development agreements and issuance of related permits and approvals consistent with the 2045 General Plan Update.
- Analyzing and planning for public infrastructure such as roadway improvements, other capital improvements, and natural/capital resource preservation and/or restoration.
- Conducting or considering further focused planning studies, as appropriate to future development in the city.

Required Approvals

With recommendations from the City's Planning Commission, the Santa Maria City Council would need to take the following discretionary actions in conjunction with the plan:

- Certification of the Final EIR and adoption of required findings, including required findings under CEQA Guidelines Sections 15090, 15091, and 15093.
- Santa Barbara County LAFCO must approve the City's annexation application, which would include certification of this Environmental Impact Report.
- Approval and adoption of the 2045 General Plan Update.

CITY OF SANTA MARIA
NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT AND SCOPING MEETING

DATE: February 18, 2025

TO: Governor's Office of Planning and Research State Clearinghouse, Responsible Agencies, Trustee Agencies, Organizations, and Interested Parties

SUBJECT: **Notice of Preparation of an Environmental Impact Report and a Scoping Meeting for the Santa Maria General Plan Update**

LEAD AGENCY:		**CONSULTANT:**	
Agency Name:	City of Santa Maria Community Development Department	**Firm Name:**	Rincon Consultants, Inc.
Street Address:	110 South Pine Street, Room 101	**Street Address:**	1530 Monterey Street, Suite D
City/State/Zip:	Santa Maria, CA 93458	**City/State/ Zip:**	San Luis Obispo, CA 93401
Contact:	Dana Eady Planning Division Manager deady@cityofsantamaria.org (805) 925-0951 ext. 2444	**Contact:**	Chris Bersbach Senior Supervising Environmental Planner cbersbach@rinconconsultants.com

Project Title: City of Santa Maria General Plan Update

The City of Santa Maria (City), as the lead agency under the California Environmental Quality Act (CEQA), is preparing an update to the Santa Maria General Plan that will guide growth and development of the city through 2045, and has determined that preparation of a programmatic EIR is necessary to evaluate potential environmental impacts of the 2045 General Plan and associated Zoning Code amendments pursuant to the California Environmental Quality Act (CEQA). The City is the CEQA Lead Agency and is requesting input on the scope of the EIR from responsible and trustee agencies, interested public agencies and organizations, and the general public (pursuant to CEQA Guidelines Section 15082).

This Notice of Preparation (NOP) provides a summary of the plan, the City's preliminary identification of the potential environmental issues to be analyzed in the programmatic EIR; and information on how to comment on the scope of the EIR. This NOP and background documents associated with the 2045 General Plan are available for review on the Santa Maria 2045 General Plan webpage at: https://www.imaginesantamaria.com/.

EIR NOP Public Comment Period: February 18 to March 19, 2025

The City requests your review and consideration of this notice and invites input and comments from interested agencies, persons, and organizations regarding the preparation of the 2045 General Plan EIR.

NOP Written Comments: Comments must be submitted via mail or email with "NOP Comments: Santa Maria 2045 General Plan EIR" in the subject line and the name and physical address of the commenter in the body of the comment to the Lead Agency Contact at the following address or e-mail by **5:00 p.m. on Wednesday, March 19, 2025**:

Dana Eady, Planning Division Manager
Community Development Department
110 South Pine Street, Suite 101
Santa Maria, California 93458
deady@cityofsantamaria.org

All comments provided should identify specific topics of environmental concern and the reason for suggesting the study of these topics in the EIR. All comments will be considered in defining the scope of the EIR in accordance with the State CEQA Guidelines. If applicable, please indicate a contact person for your agency or organization.

EIR Public Scoping Meeting: The City will hold a public EIR scoping meeting in-person to provide an opportunity for agency staff and interested members of the public to submit verbal comments on the scope of the environmental issues to be addressed in the EIR. The scoping meeting will be held on **Thursday, February 27th at 9:00 AM at Shephard Hall in the Santa Maria Library (421 S. McClelland Street, Santa Maria, California 93454).** The scoping meeting will include a brief presentation of the project to be addressed in the EIR and will provide attendees with an opportunity to provide input on the scope of the EIR.

Plan Location: The Santa Maria 2045 General Plan encompasses the entirety of the City of Santa Maria and its Sphere of Influence. Figure 1 in the Plan Description (Attachment 1) below shows the regional location and Figure 2 shows the Santa Maria 2045 General Plan boundary.

Proposed Plan: The 2045 General Plan would serve as a long-term framework for future growth, reflect issues identified from community input and changes in State law, and update all elements of the General Plan including the Land Use Element, Circulation Element, Safety Element, Environmental Justice Element, Conservation and Open Space Element, Noise Element, Public Facilities and Services Element, Recreation and Parks Element, and Economic Development Element. The update to the General Plan would include, but is not limited to, revisions to policies, narratives, data, and figures to reflect the new buildout period. The Zoning Code would also be amended to ensure consistency with the General Plan.

EIR Environmental Impact Areas: The EIR will provide a programmatic evaluation of potential environmental impacts of the plan. The EIR also will evaluate the cumulative impacts of the plan when considered in conjunction with other related past, present, and reasonably foreseeable future projects. The City anticipates that the plan could result in potentially significant environmental impacts with regard to the following topic areas, which will be further evaluated in the EIR.

- Agricultural Resources
- Air Quality and Greenhouse Gas Emissions
- Biological Resources
- Cultural and Tribal Cultural Resources
- Hydrology and Water Quality
- Noise
- Public Services and Recreation
- Transportation
- Utilities and Service Systems

EIR Plan Alternatives: The EIR will also evaluate a reasonable range of plan alternatives that could reduce or avoid potential environmental effects identified in the EIR, including a required "No Plan" Alternative.

Attachment 1 - Plan Description

The plan analyzed in this Environmental Impact Report (EIR) is the City of Santa Maria (City) 2045 General Plan Update, hereafter referred to as the "plan." This section of the EIR describes the key characteristics of the plan, including the plan proponent/lead agency, the geographic extent of the plan, plan objectives, required approvals, and the development forecasted by the plan.

Plan Purpose

The plan is an update to the City's current General Plan, which includes the following chapters: Land Use Element, Circulation Element, Safety Element, Health and Environmental Justice Element, Conservation and Open Space Element, Noise Element, Public Facilities and Services Element, Recreation and Parks Element, and Economic Development Element. The plan establishes the City's vision for future development through the horizon year of 2045. The plan will serve as the City's primary guide for future land use and development decisions in a way that meets the community needs and priorities while serving as a key tool for influencing and improving the quality of life for residents and businesses. As such, it serves as the "blueprint" for future development and conservation of a community. The 2045 General Plan Update will help the City plan for important community issues, such as community growth; housing, mobility, and infrastructure needs; climate change; and environmental protection. It will also set the stage for future social, physical, and economic development of the city.

Plan Proponent/Lead Agency

The City of Santa Maria is both the plan proponent and the lead agency for the proposed plan. The City's Community Development Department (located at 110 South Pine Street, Suite 101, Santa Maria, California 93458) prepared this EIR with the assistance of Rincon Consultants, Inc. and Raimi + Associates.

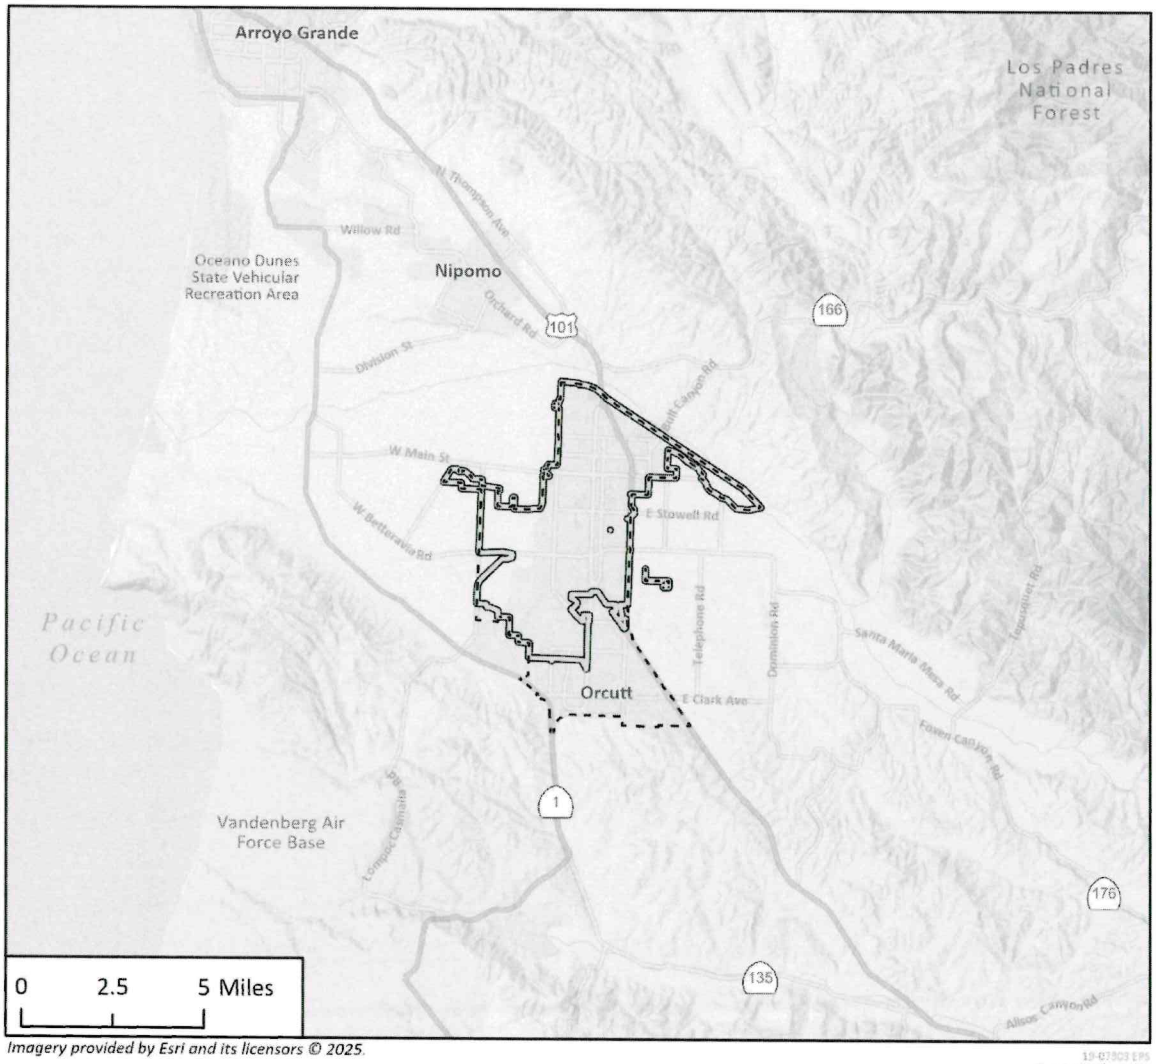
Plan Area Location and Environmental Setting

Regional Location

The City of Santa Maria is located in northern Santa Barbara County, surrounded by the hills of the Santa Maria River Valley (see Figure 1). The General Plan area involves all land within the Santa Maria Sphere of Influence[1] (SOI) and includes the annexation of areas east of the city limits (see Figure 2). The City of Santa Maria is generally bound by the Santa Maria River to the north, agricultural lands to the east and west, and the unincorporated town of Orcutt to the south.

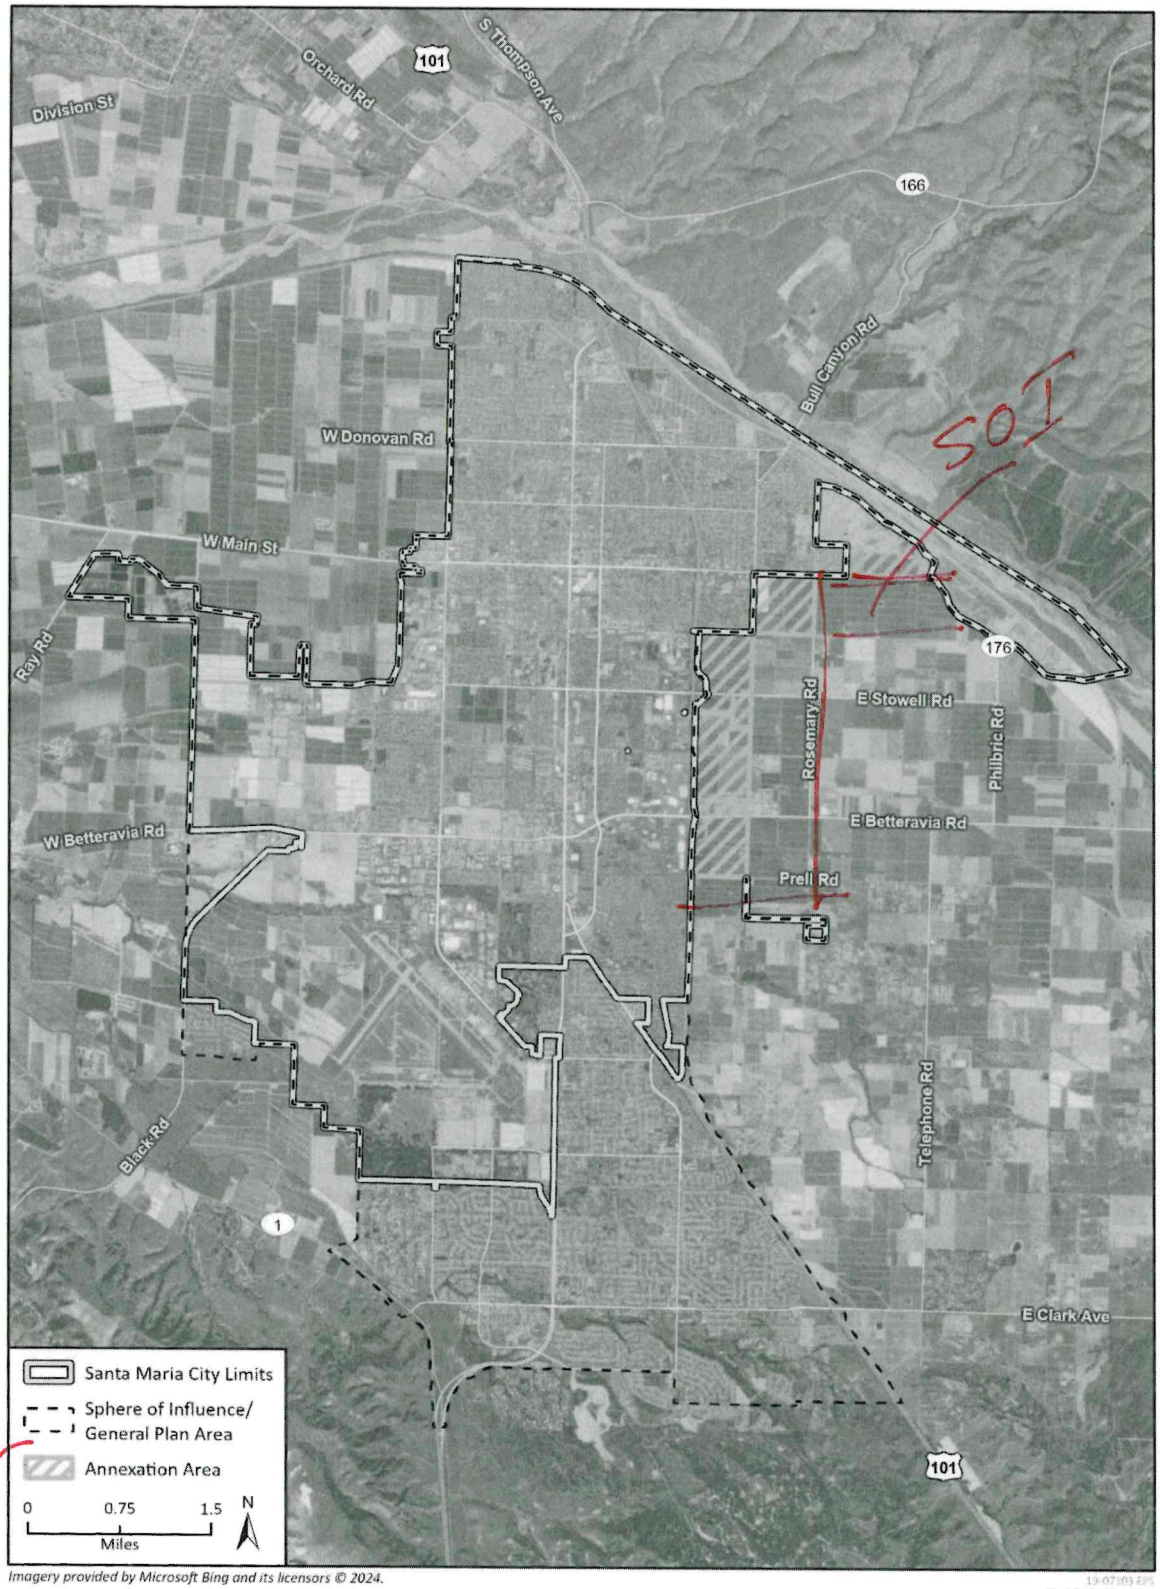
[1] The term "sphere of influence" applies to the area designated by the Santa Barbara Local Agency Formation Commission (LAFCO) as the probable, future physical boundary or service area of the city. Overall, planning decisions made for the city are assumed to have a bearing on growth and development in these unincorporated adjacent areas. Areas not included as part of the annexation for the 2045 General Plan will continue to be deferred to the County land use designations and regulations in the SOI. Any development or change that happens in the SOI during the lifetime of the General Plan will occur under the jurisdiction of the County. Therefore, this EIR does not evaluate impacts resulting from future growth within the SOI, outside of the proposed annexation, as part of the proposed plan. However, where relevant, this EIR does evaluate potential impacts resulting from future growth within the city limits to lands within the SOI. The SOI is also included in the cumulative setting for this EIR.

Figure 1 Regional Location



Imagery provided by Esri and its licensors © 2025.

Figure 2 Plan Area Location



Existing

need to have proposed SOI beyond the annexation area or just annexation areas?

U.S. Highway 101 (U.S. 101) forms the eastern edge of the city. A linear portion of Santa Maria is also located to the west of U.S. 101. This portion of the city extends south from Vineyard Trail Road then extends east along an internal farm road. Santa Maria is located approximately 25 miles south of San Luis Obispo, 50 miles northwest of Santa Barbara, 250 miles south of San Francisco and 170 miles north of Los Angeles.

Principal regional transportation facilities serving Santa Maria are U.S. 101, State Route 135 (SR 135), State Route 166 (SR 166), and the Santa Maria Valley Airport. Regional transit is provided by Clean Air Express and the San Luis Obispo Regional Transit Authority. Regional rail is provided by Amtrak.

Local Setting

The City of Santa Maria is characterized as a suburban residential community. The plan area covers approximately 17,200 acres within the city limits and approximately 4,500 acres within the SOI (City of Santa Maria 2020). Approximately 27 percent of land within Santa Maria is occupied with residential uses, primarily consisting of single-family residences (22 percent). Agricultural uses occupy 14 percent of the city, airport uses occupy 11 percent, public and institutional uses occupy 8 percent, and commercial uses occupy 7 percent. Approximately 19 percent of the city is comprised of vacant land. Residential land uses are distributed throughout the city. Non-residential land uses, including industrial and commercial, commonly line major corridors in Santa Maria, including Broadway, Main Street, and Betteravia Road. Agricultural and vacant uses are located at the periphery of the city. The city is underlain by the Santa Maria River Valley Groundwater Subbasin. The local climate in Santa Maria is identified as a Mediterranean climate characterized by warm, dry summers and cool, moist winters.

Existing Plan Area Characteristics

The 2045 Santa Maria General Plan area covers approximately 17,200 acres, which includes 12,700 acres within the city limits and 4,500 acres within the Sphere of Influence (SOI). Approximately 110,608 people live within the General Plan area as of January 2024, resulting in population density of approximately 640 people per square mile. There are 34,412 residential units within the General Plan area as of 2024 (California Department of Finance 2024).

The annexation area evaluated in the plan (discussed in detail in Section **Error! Reference source not found.**) covers 985 acres east of the City of Santa Maria's limits.

Regulatory Setting

State law (Government Code Sections 65300 through 65303.4) requires each municipality to adopt and periodically update its General Plan, and requires that a General Plan include the following mandatory subject areas, or "elements": Land Use, Circulation, Housing, Open Space, Conservation, Noise, Safety, and Environmental Justice. Municipalities may also prepare optional elements that can be organized or combined at the municipality's discretion.

The 2045 General Plan has been organized into the following elements: Land Use; Circulation; Safety, Health and Environmental Justice; Conservation and Open Space; Noise; Public Facilities and Services; Recreation and Parks Element; and Economic Development.[2] Together, these elements

[2] General Plan element titles and organization of required content in the General Plan is currently in draft status and subject to change.

cover all topics required to be included in a General Plan under State law. The City of Santa Maria City Council adopted the 6th Cycle Housing Element on December 5, 2023. The 2045 General Plan may require additional updates to the adopted Housing Element, although such updates are anticipated to be for consistency with the 2045 General Plan.

Under State law a property's zoning is required to be consistent with its General Plan land use designation (Government Code Section 65860). Section 65860(c) of the Government Code requires that when a General Plan is amended or updated in a way that makes the Zoning Ordinance inconsistent with the General Plan, "the zoning ordinance shall be amended within a reasonable time so that it is consistent with the general plan as amended."

Plan Objectives

The 2045 General Plan will serve as a long-term framework for future growth and development, represents the community's view of its future, and contains the goals and policies upon with the City Council, Planning Commission, and the entire community will base land use and resource decisions. The 2045 General Plan will provide a contemporary plan that will guide Santa Maria though the next 20 years. The primary objective of this plan is to update the existing Santa Maria General Plan in order for it to be compliant with State law.

The 2045 General Plan would implement the following vision to guide development.

Vision. Santa Maria in 2045 is a community where families can establish and maintain multi-generational roots. It is close-knit, culturally diverse, and economically inclusive. This is possible, in part, because Santa Maria offers affordable, safe, attractive, and healthy homes and neighborhoods for all residents. This is also possible because of the availability of high-quality education, jobs, and economic opportunity. Building from a strong foundation in the agricultural, retail, healthcare, and business services industries, Santa Maria has continued to diversify by expanding the training and skills of residents and by adapting to new technologies and broader economic trends. People are proud of their history and heritage. This is reflected in the diverse, well-preserved historical resources and the attractive, inviting streets and public gathering places. Museums, art venues, a strong civic sector, and the many welcoming community events and celebrations are all evidence of a vibrant local culture. Residents have convenient access on foot and by car, bus, and bicycle to jobs, schools, community amenities like parks and sports fields, and the region's natural environment. Public services are reliable, inclusive, and efficient, and the community is well-served by equitable, modern, and sustainable infrastructure, facilities, and utilities.

The City identifies the following 11 guiding principles, which also serve as the proposed plan objectives for the purposes of complying with CEQA.

- **Agricultural Identity.** Continue to support the agricultural industry and its workforce. Balance the protection of prime agricultural land with the development necessary to support continued population growth and the diversification of the local economy.
- **Culture, History, and Art.** Celebrate and share Santa Maria's multicultural heritage and contemporary diversity. Preserve historic resources, foster the arts, maintain a strong sense of community through cultural festivals, and invite visitors to enjoy the richness of local expression and resources.
- **Community Design.** Create public spaces that reflect the community identity, foster civic pride, and invite community members to gather, both informally and for events. Design streets, buildings, and landscaping that reflect the community's history, culture, and natural

environment. Use lighting, street trees, benches, and other amenities to make sidewalks and public spaces safe and welcoming, with a focus on the Downtown and along the Main and Broadway corridors.

- **Community Health.** Grow and expand physical and mental healthcare services to meet the needs of all residents. Improve community health by addressing the environmental justice priorities of disadvantaged communities, including seniors, low-income households, linguistically isolated families, the homeless, and youth, who comprise 35 percent of residents. Minimize residents' potential for exposure to noise, pesticides, and industrial pollution. Foster healthy lifestyles by expanding safe and attractive options for physical activity and by expanding healthy food access.
- **Natural Environment and Resilience.** Conserve water resources in the city and support efforts to maintain the Santa Maria River. Expand opportunities to enjoy the area's natural resources and the region's beauty. Safeguard the community from natural hazards, including those exacerbated by climate change.
- **Housing Quality and Choice.** Develop a high-quality and diverse housing supply at all levels of affordability that preserves Santa Maria as a place where families can establish roots and today's youth can afford to stay. Balance the growth of housing and the economy so that people can live and work in Santa Maria. As new housing types are introduced, (e.g., accessory dwelling units (ADUs)), adapt parking, transportation, and other community features. Develop workforce housing solutions that provide safe, healthy, and comfortable homes for workers and their families.
- **Resilient Economy.** Cultivate a diverse and resilient economy in which local businesses and families thrive and job growth keeps apace with housing development. Grow the existing economic base in agriculture, retail, healthcare, and business services, and expand into new industries. Ensure access to high quality education that is aligned with local industries and entrepreneurship.
- **Connected Growth.** To accommodate projected population, housing, and jobs growth, focus on improvements to existing neighborhoods along with infill and vacant site development. Expand beyond current city limits when needed, weighing the short and long term environmental, economic, infrastructure, public service, and fiscal trade-offs. Establish strong cultural, design, and physical connections between newly developed areas and the rest of Santa Maria.
- **Transportation Innovations.** Develop a balanced, equitable, affordable, and reliable transportation network where pedestrians, cyclists, trucks, cars, rail, and transit can safely and efficiently navigate to destinations within Santa Maria. Focus on maintaining existing roadways, expanding walking and biking options, and reducing congestion and maintenance costs. Transform corridors and streets from points of conflict among people, cyclists, cars, and trucks into places that bring neighborhoods and families together. Prepare for and expand regional connections with enhanced bus, rail, and air service. Prepare for technological advances like autonomous vehicles and remote work, and take advantage of opportunities and incentives to reduce vehicle miles traveled (VMT) and greenhouse gas (GHG) emissions.
- **Infrastructure, Utilities, Facilities, and Services**. Provide residents and businesses with equitable access to affordable, reliable, and sustainable infrastructure and utilities, including water, wastewater, flood control, gas, phone, cable, and broadband internet. Deliver high-quality services and facilities for all community members, including expedient emergency response, accessible health care, high-quality education and career training, and convenient and equitable access to well-maintained parks and recreational facilities.

- **Governance and Engagement.** Continue to conduct and increase meaningful and inclusive civic engagement that empowers a diversity of perspectives in public decision-making. Provide residents and businesses with high-quality, equitable, and accessible customer service, including City communications and events in multiple languages and interpretation services. Partner with community organizations and institutions to build trust and increase participation, including among youth, who will be the City leaders in 2045.

Plan Characteristics

2045 General Plan Update Organization

The elements included in the 2045 General Plan are further described in this section.

- **Conservation and Open Space Element.** This element outlines the development, management, and preservation of natural, tribal, cultural, and historic resources within the plan area. Goals, policies, and actions within this element address climate change adaptation and resilience in relation to natural resources, greenhouse gas emissions reduction, urban forestry, and the use of open space for the conservation of natural, cultural, and other resources as well as for hazard mitigation.
- **Safety Element.** This element addresses natural and manmade safety hazards in Santa Maria, including geologic and seismic hazards, fire hazards, flooding, hazardous materials, and emergency response and establishes policies and actions to mitigate hazard impacts to people and property. The Safety Element also evaluates evacuation capacity under a range of hazard scenarios, identifies single-access neighborhoods, and establishes policies and actions to enhance evacuation capacity throughout the city, consistent with Assembly Bill (AB) 747 and Senate Bill (SB) 99. In accordance with SB 379, this element also includes a climate change vulnerability assessment and measures to address climate vulnerabilities and hazard mitigation and emergency response.
- **Land Use.** This element designates the placement and distribution of future development to facilitate orderly growth within the city. This element establishes future land use patterns and specifies appropriate residential density and development intensity. Goals and policies serve as a guide for decision makers to direct the development of the city. Additionally, this element provides an overall design framework for the city with the goal of preserving community character and highlighting community gateways and views.
- **Circulation.** This element provides a framework for the City's multimodal transportation network, addressing the movement of people and goods in and around Santa Maria, while ensuring the orderly improvement of the circulation system in response to the Land Use Element. This element also establishes policies related to the electrification of vehicles and commercial enterprises promoting Mobility as a Service (MaaS), complete streets (AB 1358) and VMT (SB 743).
- **Public Facilities and Services Element.** This element evaluates existing and future conditions related to the provision and maintenance of public buildings and services, including parks, schools, libraries, police, fire, and water, wastewater, and stormwater infrastructure. This element presents goals, policies, and actions related to public facilities and services in order to sustain existing households and businesses and accommodate future growth in population, employment, and development.

- **Recreation and Parks Element.** This element inventories existing park and recreational resources throughout the city and evaluates future conditions and needs related to parks and recreation. Goals, policies, and actions within this element aim to facilitate equitable distribution of resources and investments to meet the recreational needs of all community members.
- **Economic Development Element.** This element includes goals, policies, and actions related to the retention and expansion of existing business sectors, as well as diversifying the economy to develop new kinds of businesses in Santa Maria.
- **Noise Element.** This element identifies and evaluates sources of noise and groundborne vibration and aims to minimize excessive noise exposure and noise conflicts. This element would be consistent with the Santa Maria Public Airport Master Plan and include new noise contours.
- **Health and Environmental Justice Element.** This element identifies disadvantaged communities within the city and includes goals, policies, and actions to reduce pollution exposure, promote access to food, public facilities, and safe housing, and strengthen civic engagement in City planning and decision making.

The City recently updated its Housing Element, which was adopted on December 5, 2023. The Housing Element provides the City's action plan for meeting the City's 6th Cycle Regional Housing Needs Allocation (RHNA) of 5,418 dwelling units for the 6th Cycle Housing Element (2023 to 2031). The Housing Element has undergone separate CEQA review and for that reason is not part of the plan being evaluated in this EIR. The Housing Element and Initial Study – Mitigated Negative Declaration were adopted on December 5, 2023.

Land Use Designations

The current Santa Maria General Plan Land Use Element establishes 30 separate land use designations to provide a mixture of land uses for the City. The existing City of Santa Maria Land Use Designations Map is shown in Figure 3.

The plan would change some of the land use designations; including planned land use changes that resolve inconsistencies between existing uses and the General Plan land use designations. Land use conflicts primarily consist of industrial, heavy commercial, agricultural, and airport uses in proximity to residential uses. In addition, the plan includes the following land use designation changes:

- Revise the High Density Residential (HDR) land use designation to increase the maximum allowed density from 22 dwelling units/acre to 30 dwelling units/acre.
- Eliminate the Medium Density Residential-10 (MDR-10) land use designation and reassign all parcels currently designated MDR-10 to MDR-12, which would have an allowed density of 12 dwelling units/acre.
- Add two new land use designations, Downtown Specific Plan (SP) and Planned Annexation (PA).

Land use changes for the proposed annexation areas east of the city limits (the planned annexation areas are discussed in detail in the Annexation subsection that follows. Figure 4 shows the changes in land use designations compared to the current General Plan. Proposed changes from the existing General Plan land use pattern include the following:

- A parcel along North Broadway from Low Density Residential and Community Commercial to Community Facilities (CF);
- Parcels along Main Street from Community Commercial to Main Mixed Use (MMU);

Figure 3 Existing Land Use Designations within the City of Santa Maria

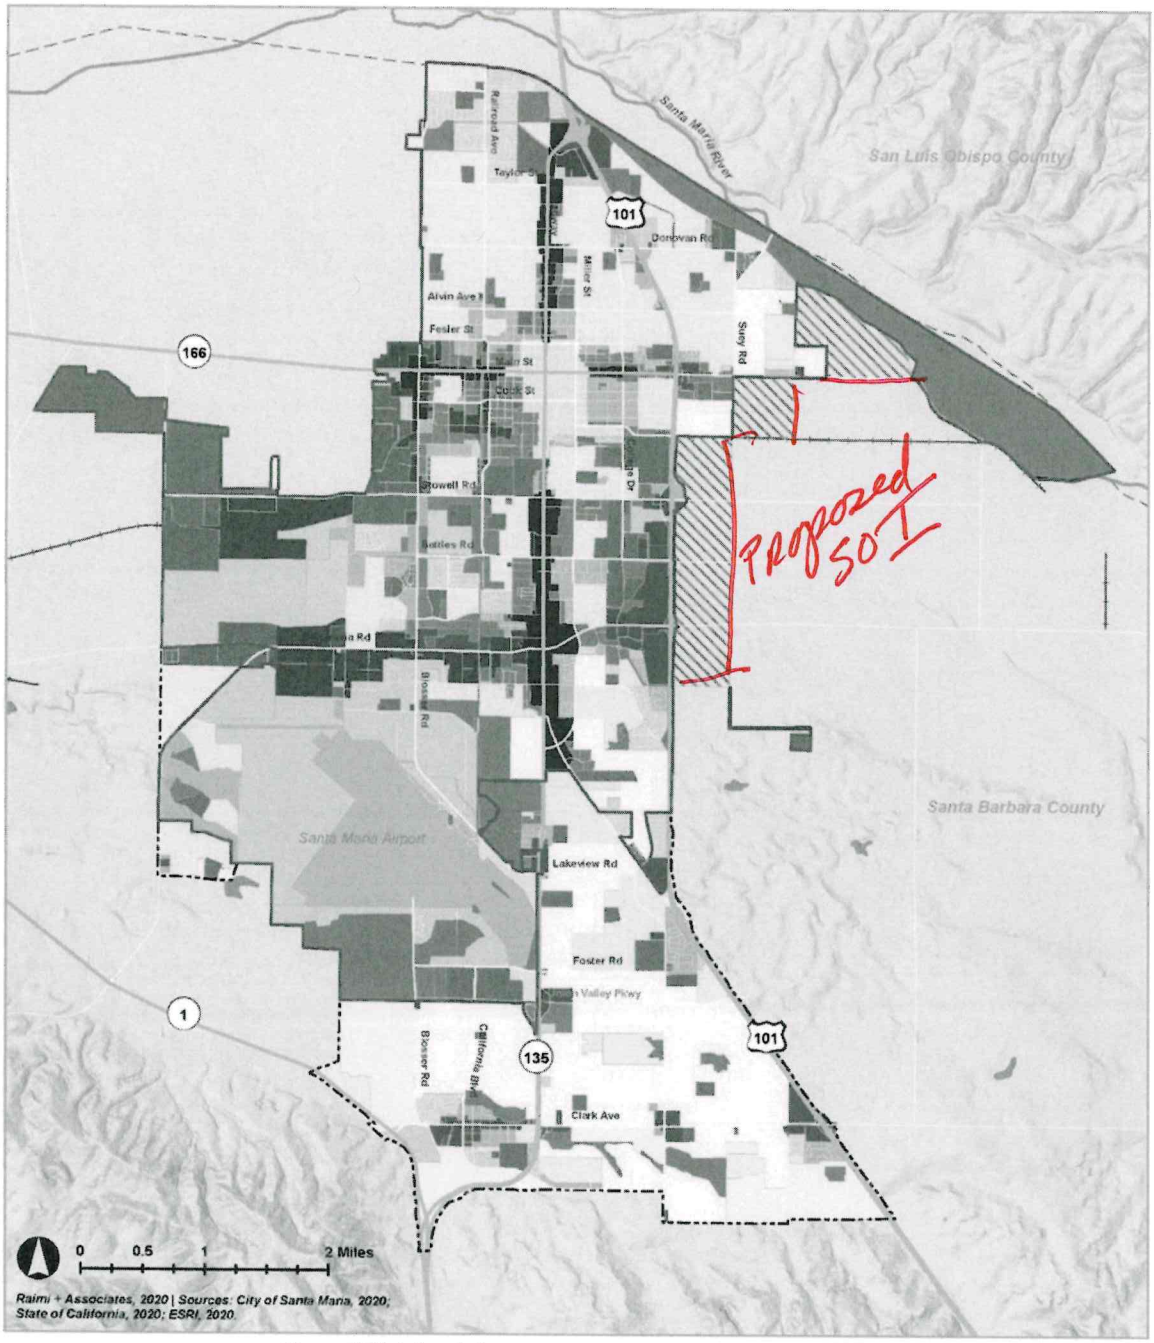
Figure 4 **Proposed Land Use Changes**



Santa Maria General Plan imagine

General Plan Land Use

- Santa Maria City Limits
- Sphere of Influence
- County Boundaries
- Railroads
- Santa Maria River
- Water
- Residential Agricultural (RA) or Very Low Density (VLDR)
- Lower-Density Residential (LWDR)
- Low-Density Residential (LDR)
- Low-Medium Density Residential (LMDR)
- Medium Density Residential (MDR)
- High Density Residential (HDR)
- Corridor Mixed Use (CMU)
- Neighborhood Commercial (NC)
- Community Commercial (CC)
- Commercial/Professional Office (CPO)
- Light Industrial (LI)
- General Industrial (GI)
- Heavy Commercial/Manufacturing (HCM)
- Airport Service (AS)
- Primary Agricultural Open Space (AOS-1)
- Secondary Agricultural Open Space (AOS-2)
- Conservation Open Space (COS)
- Recreational Open Space (ROS)
- Community Facilities (CF)
- Specific Plan (SP)
- Planned Annexation (PA)

SOI

- Parcels along Broadway from Community Commercial to Broadway Mixed Use (BMU); and
- Allow Low Density Residential in Area 9 along A Stret in the western portion of the city.

Changes in land use designations within the General Plan would also necessitate revisions to the following Specific Plans:

- Amend the Entrada Specific Plan to reflect the new Broadway and Main Mixed Use land use designations.
- Amend the Area 9 Specific Plan to allow low density residential uses along A Street, consistent with the LMDR-8 designation.

Annexation

The 2045 General Plan would include the annexation of areas east of the city limits and SOI. There are three separate areas (shown in Figure 5) that would be included as part of the proposed annexation ("annexation area") that would total 985 acres.

The first area proposed for annexation is generally bound by Panther Drive to the west, E. Main Street to the south, and the city limits to the north and east. The second area proposed for annexation is generally bound by S. Suey Road to the west, E. Main Street to the north, E. Jones Street to the south, and Rosemary Road to the east. The third area proposed for annexation is generally bound by E. Jones Street to the north, U.S. 101 to the west, Vineyard Trail Road to the south, and Rosemary Road to the east. Much of the annexation area is vacant or agricultural land.

Existing zoning and land use designations within the annexation area are determined by the County of Santa Barbara and consist primarily of agricultural land use designations (Agriculture II with a minimum lot size of 100 acres [AG-II-100] and Agriculture II with a minimum lot size of 40 acres [AG-II-40]). Land use changes for the annexation area would include the establishment of a new land use designation, Planned Annexation, which would allow for a mix of commercial, residential, industrial, and public land uses in annexed land outside of current city limits.

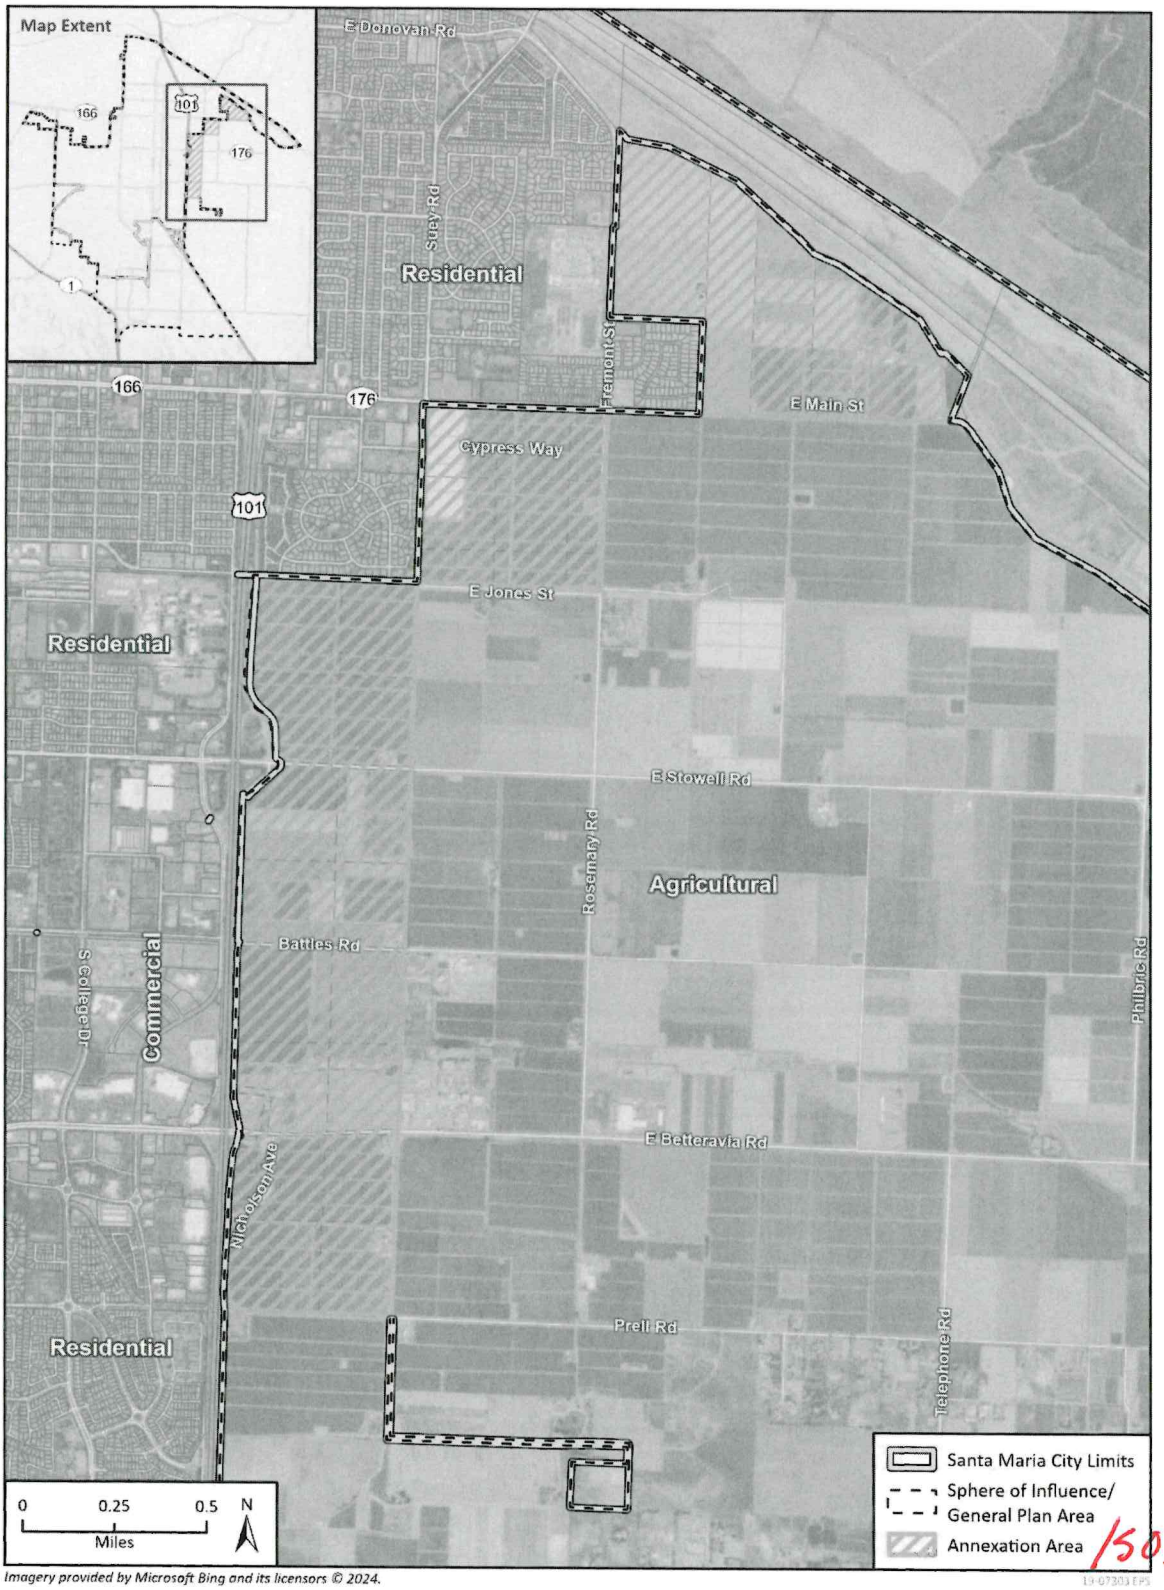
Noise Contour Revisions

The City of Santa Maria noise characteristics are described within the 2045 General Plan Noise Element including descriptions of common sources of noise as well as goals and policies to lessen noise for sensitive land uses (e.g., residences, schools, medical facilities). As required pursuant to the Governor's Office of Planning and Research (OPR) Guidelines, the Noise Element also includes a map of noise contours as depicted via lines that represent equal levels of noise exposure across the city. Noise contours information informs planning decisions, including siting of potential future sensitive land uses.

Proposed 2045 General Plan Buildout

For reasonable analysis purposes in this EIR, the City assumes maximum 2045 General Plan buildout (of both residential and non-residential uses) within the city would occur by 2045. Maximum buildout of the General Plan is assumed to be a locally appropriate projection of development within the plan area based on updated land use designations and the proposed annexation rather than development of every parcel within the city. While complete buildout is not likely to occur by 2045, the maximum buildout assumption represents the most conservative approach to evaluating the plans potential environmental effects and satisfying the requirements of the CEQA Guidelines.

Figure 5 Proposed 2045 General Plan Annexation Area



For the purposes of this EIR, "General Plan Area" would refer to the City of Santa Maria, the proposed annexation area, and the Sphere of Influence.

Table 1 indicates the net change from 2022 conditions in Santa Maria to maximum buildout of the plan by 2045.

Table 1 Existing and Proposed Plan Land Uses Components Summary

	Existing (2022)	Proposed (2045)	Net Change from Existing to Proposed
Acreage within City Limits	15,058 acres	985 acres	16,043 acres
Residential Units	28,200 units	44,340 units	16,140 units
Jobs	43,050 jobs	66,800 jobs	23,750 jobs

The 2045 General Plan would add 985 acres of land to the city limits and would provide the framework for development of up to 16,140 net new[3] primary and accessory dwelling residential units, including the development of 1,300 accessory dwelling units (ADUs).

The 2045 General Plan would provide the framework for development of up to 1,504 net new non-residential acres, with the following composition (numbers in parentheses indicate a reduction in acreage):

- (463) acres of commercial uses
- 452 acres of mixed uses
- 7 acres of Industrial/airport uses
- 33 acres of public and open space
- 1,012 acres of planned future development (specific plan and planned annexation areas)

Approximately 32 percent of the city remains undeveloped. The undeveloped areas of the city are classified as vacant (19 percent) and agricultural (13 percent). The existing General Plan indicates that 43 percent of the land is classified Open Space, and the remaining 32 percent is classified as industrial. Many of the vacant parcels within the city, clustered between Battles Road, Betteravia Road, and U.S. 101 are either already slated for development or are located within a Specific Plan.

Specific land use designations proposed for the 2045 General Plan area are designed to ensure consistency with the updated Housing Element and existing land uses, such as industrial, heavy commercial, or agricultural. These land use changes would allow for increased residential density along Main Street and Broadway, as well as on opportunity sites with a high potential for redevelopment. Areas of the city with the most potential for change are concentrated in Downtown, neighborhoods in the City Core, Main Street and Broadway, Southwest Neighborhoods (northwest, west, and south of the airport), and areas proposed for annexation. The 2045 General Plan serves as the City's long-term development blueprint through 2045, contains goals and policies guiding land use and infrastructure decisions through 2045, and brings the General Plan up to date in response to latest State and regional plans and regulations related to climate-related hazards,[4] emergency evacuation routes and access, water supply, and mobility.

[3] Net new means the change from City of Santa Maria existing (2024) development to full buildout of the proposed plan (i.e., 2045 General Plan) by 2045; this EIR analyzes the net change in terms of potential physical environmental impacts.
[4] Pursuant to SB 379, which amended California Government Code Section 65302.

Intended Use of this EIR

This EIR provides a programmatic environmental review of implementing the City's 2045 General Plan Update. Subsequent activities falling under the City's 2045 General Plan Update will utilize this EIR to focus the environmental review of these consequent activities and to determine their effects. If a new project is proposed that is not anticipated by the 2045 General Plan Update, or that may result in project-level environmental effects not addressed in this program-level EIR, the future project would be evaluated as required under CEQA. This EIR is not intended to prohibit consideration of future projects or CEQA analysis of future projects.

Plan Implementation

Following adoption of the 2045 General Plan Update by the City Council, all subsequent activities and development within the City would be guided by the goals and policies in the 2045 General Plan Update. Therefore, the 2045 General Plan provides specific policy guidance for implementation of plan concepts. The City would also need to coordinate with Santa Barbara County, the Santa Barbara Local Agency Formation Commission (LAFCO), and other public agencies to implement policies that affect their respective jurisdictions, or would affect the region. Implementing these policies in accordance with new development (residential, commercial, or industrial) would be subject to the City's established review and approval processes, with final review and approval by the appropriate departmental staff, as well as the appointed and elected officials. The principal responsibilities that City officials and staff have for plan implementation are briefly summarized below:

- Updating the City of Santa Maria Zoning Ordinance to achieve consistency with the adopted General Plan Update.
- Rezoning properties, as dictated by future development proposals.
- Approval of tentative maps, ~~variances,~~ planned development and conditional use permits, and other land use permits and entitlements.
- Approval of development agreements and issuance of related permits and approvals consistent with the 2045 General Plan Update.
- Analyzing and planning for public infrastructure such as roadway improvements, other capital improvements, and natural/capital resource preservation and/or restoration.
- Conducting or considering further focused planning studies, as appropriate to future development in the city.

Required Approvals

With recommendations from the City's Planning Commission, the Santa Maria City Council would need to take the following discretionary actions in conjunction with the plan:

- Certification of the Final EIR and adoption of required findings, including required findings under CEQA Guidelines Sections 15090, 15091, and 15093.
- Santa Barbara County LAFCO must approve the City's annexation application, which would include certification of this Environmental Impact Report.
- Approval and adoption of the 2045 General Plan Update.

Re: 2025020584 City of Santa María General Plan Update Project, Santa Barbara County

Dear Ms. Eady:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

a. A brief description of the project.

b. The lead agency contact information.

c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).

d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.

b. Recommended mitigation measures.

c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

a. Type of environmental review necessary.

b. Significance of the tribal cultural resources.

c. Significance of the project's impacts on tribal cultural resources.

d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.

b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Mathew.Lin@NAHC.ca.gov.

Sincerely,

Mathew Lin

MARCH 13, 2025

VIA EMAIL: DEADY@CITYOFSANTAMARIA.ORG
DANA EADY, PLANNING AND DIVISION MANGER
COMMUNITY DEVELOPMENT DEPARTMENT
110 SOUTH PINE STREET, SUITE 101
SANTA MARIA, CA 93458

Dear Dana Eady:

NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT FOR THE SANTA MARIA GENERAL PLAN UPDATE PROJECT, SCH# 2025020584

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Notice of Preparation of an Environmental Impact Report for the Santa Maria General Plan Update Project (Project).

The Division monitors and maps farmland conversion on a statewide basis, provides technical assistance regarding the Williamson Act, and administers various agricultural land conservation programs. Public Resources Code, section 614, subdivision (b) authorizes the Department to provide soil conservation advisory services to local governments, including review of CEQA documents.

Protection of the state's agricultural land resources is part of the Department's mission and central to many of its programs. The CEQA process gives the Department an opportunity to acknowledge the value of the resource, identify areas of Department interest, and offer information on how to assess potential impacts or mitigation opportunities.

The Department respects local decision-making by informing the CEQA process, and is not taking a position or providing legal or policy interpretation.

We offer the following comments for consideration with respect to the project's potential impacts on agricultural land and resources within the Department's purview.

PROJECT ATTRIBUTES

The Project proposes to update the City's current General Plan, which includes the following chapters: Land Use Element, Circulation Element, Safety Element, Health and Environmental Justice Element, Conservation and Open Space Element, Noise Element, Public Facilities and Services Element, Recreation and Parks Element, and Economic Development Element. The plan establishes the City's vision for future development through the horizon year of 2045. The plan will serve as the City's primary guide for

future land use and development decisions in a way that meets the community needs and priorities while serving as a key tool for influencing and improving the quality of life for residents and businesses. The Project site contains Prime Farmland, Farmland of Statewide Importance, and Unique Farmland as designated by DOC's Farmland Mapping and Monitoring Program, and a portion of the project site is subject to a Williamson Act contract.

PROJECT CONSIDERATIONS

The conversion of agricultural land represents a permanent reduction and impact to California's agricultural land resources. The Department generally advises discussion of the following in any environmental review for the loss or conversion of agricultural land:

- Type, amount, and location of farmland conversion resulting directly and indirectly from implementation of the proposed project.
- Impacts on any current and future agricultural operations in the vicinity; e.g., land-use conflicts, increases in land values and taxes, loss of agricultural support infrastructure such as processing facilities, etc.
- Incremental impacts leading to cumulative impacts on agricultural land. This would include impacts from the proposed project, as well as impacts from past, current, and likely future projects.
- Implementation of any City or County Agricultural Mitigation Plans, Programs, or Policies.
- Proposed mitigation measures for impacted agricultural lands within the proposed project area.
- The project's compatibility with lands within an agricultural preserve and/or enrolled in a Williamson Act contract.

WILLIAMSON ACT

Where, as here, the project site is located on land subject to a Williamson Act contract, the Department advises that the environmental review discuss the compatibility of the project with the contract and local Williamson Act program requirements.

MITIGATING AGRICULTURAL LAND LOSS OR CONVERSION

Consistent with CEQA Guidelines, the Department advises that the environmental review address mitigation for the loss or conversion of agricultural land. An agricultural conservation easement is one potential method for mitigating loss or conversion of agricultural land. (*See* Cal. Code Regs., tit. 14, § 15370 [mitigation includes "compensating for the impact by replacing or providing substitute resources or environments, including through permanent protection of such resources in the form of conservation easements."]; *see also King and Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814.)

Mitigation through agricultural conservation easements can take at least two forms: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural easements. The conversion of agricultural land may be viewed as an impact of at least regional significance. Hence, the search for replacement lands may not need to be limited strictly to lands within the project's surrounding area. A helpful source for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

California Council of Land Trusts

Of course, the use of conservation easements is only one form of mitigation, and the Department urges consideration of any other feasible measures necessary to mitigate project impacts.

Thank you for giving us the opportunity to comment on the Notice of Preparation of an Environmental Impact Report for the Santa Maria General Plan Update. Please provide the Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Associate Environmental Planner via email at Farl.Grundy@conservation.ca.gov.

Sincerely,

Monique Wilber

Monique Wilber

Conservation Program Support Supervisor

Santa Maria General Plan Update Scoping Meeting

Three attendees joined us in the room for the presentation and subsequent discussion (at the Santa Maria Public Library).

Speakers:

1. Question from one speaker about what is going to happen with Mahoney Ranch.
    a. **Dana Eady response:** The GP Update isn't proposing to change the land use for this property. Notes question about potential future development due to current concerns about CTS/sensitive species on the property.
    b. **Commenter follow up:** Discussion of potential mitigation banking/land swap for addressing impacts and allowing potential development of the property.
2. A second speaker notes the 900+ acres proposed for annexation, and asks if there a phasing plan for development of these annexation areas (e.g, would it be from north to south?).
    a. **Dana Eady response:** Dana said there is not a current plan for the order of future development – likely landowner/developer driven. Discussed the high-level planning process for potential future development of annexation areas, including potential need for future project-specific environmental review. Commenter follow up: question about whether it would be helpful for the City to have information from landowners about what they may consider bringing forward. Dana Eady/Rincon response: Assumptions for these areas in the EIR will be based on current direction from City Council (CC identified annexation areas being considered, and has expressed a desire for a mix of uses, which informs the EIR PD/projections, and assumptions that will guide the EIR analysis).

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Santa Maria GPU (Net New)
Operational Year	2045
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.90
Precipitation (days)	10.0
Location	Santa Maria, CA, USA
County	Santa Barbara
City	Santa Maria
Air District	Santa Barbara County APCD
Air Basin	South Central Coast
TAZ	3382
EDFZ	6
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	16,140	Dwelling Unit	425	15,494,400	0.00	0.00	58,265	—

General Office Building	64,154	1000sqft	1,473	64,154,000	0.00	0.00	—	—
Industrial Park	305	1000sqft	7.00	304,920	0.00	0.00	—	—
City Park	33.0	Acre	33.0	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.13	annual days of extreme heat
Extreme Precipitation	4.70	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	47.0	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	10.6
AQ-PM	10.0
AQ-DPM	63.0
Drinking Water	11.2
Lead Risk Housing	99.5
Pesticides	94.3
Toxic Releases	11.0
Traffic	35.7
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	0.00
Haz Waste Facilities/Generators	58.3
Impaired Water Bodies	77.3
Solid Waste	86.5
Sensitive Population	—
Asthma	86.7
Cardio-vascular	52.0
Low Birth Weights	58.8
Socioeconomic Factor Indicators	—
Education	74.8
Housing	73.7
Linguistic	82.3
Poverty	68.8
Unemployment	11.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	16.7842936
Employed	26.07468241
Median HI	19.58167586
Education	—
Bachelor's or higher	21.46798409
High school enrollment	100
Preschool enrollment	24.25253433
Transportation	—
Auto Access	17.51571924
Active commuting	31.00218144
Social	—
2-parent households	26.42114718
Voting	71.23059156
Neighborhood	—
Alcohol availability	39.92044142
Park access	81.35506224
Retail density	93.58398563
Supermarket access	59.20698062
Tree canopy	1.73232388
Housing	—
Homeownership	21.2498396
Housing habitability	23.77774926
Low-inc homeowner severe housing cost burden	59.43795714
Low-inc renter severe housing cost burden	18.86308225

Uncrowded housing	12.81919672
Health Outcomes	—
Insured adults	9.444373155
Arthritis	44.8
Asthma ER Admissions	32.8
High Blood Pressure	74.3
Cancer (excluding skin)	57.8
Asthma	16.4
Coronary Heart Disease	34.0
Chronic Obstructive Pulmonary Disease	16.6
Diagnosed Diabetes	47.0
Life Expectancy at Birth	17.7
Cognitively Disabled	56.3
Physically Disabled	50.9
Heart Attack ER Admissions	66.1
Mental Health Not Good	18.5
Chronic Kidney Disease	45.1
Obesity	26.8
Pedestrian Injuries	59.4
Physical Health Not Good	24.5
Stroke	34.3
Health Risk Behaviors	—
Binge Drinking	40.3
Current Smoker	18.8
No Leisure Time for Physical Activity	31.5
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0

Other Decision Support	—
2016 Voting	53.4

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	67.0
Healthy Places Index Score for Project Location (b)	23.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Population based on a pph of 3.61.
Operations: Hearths	No fireplaces or wood stoves
Operations: Architectural Coatings	SBCAPCD Rule 323.1 nonflat coating

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.13	annual days of extreme heat
Extreme Precipitation	4.70	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	47.0	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	10.6
AQ-PM	10.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	67.0
Healthy Places Index Score for Project Location (b)	23.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

Potential to Occur Table

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur in Project Area	Habitat Suitability/ Observations
Plants and Lichens				
Astragalus didymocarpus var. *milesianus* Miles' milk-vetch	None/None G5T2/S2 1B.2	Annual herb. Coastal scrub. Clay soils. Elevations: 65-295ft. (20-90m.) Blooms Mar-Jun.	Low Potential	Suitable coastal scrub habitat does not occur in the study area. The elevation range of the study area is within the expected range of the species. The most recent CNDDB documented occurrence of the species within 2 miles of the study area is from 1935.
Caulanthus californicus California jewelflower	FE/SE G1/S1 1B.1	Chenopod scrub, Pinyon and juniper woodland, Valley and foothill grassland. Sandy. Elevations: 200-3281ft. (61 - 1000 m.) Blooms Feb-May.	Low Potential	Suitable valley and foothill grassland occurs in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Cirsium loncholepis La Graciosa thistle	FE/ST G5T1/S1 1B.1	Cismontane woodland, Coastal dunes, Coastal scrub, Marshes and swamps (brackish), Valley and foothill grassland. Mesic, Sandy. Elevations: 13-723ft. (4 - 220 m.) Blooms May-Aug.	Low Potential	Suitable valley and foothill grassland occurs in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Cordylanthus maritimus ssp. *Maritimus* salt marsh bird's-beak	FE/SE G4?T1/S1 1B.2	Coastal dunes, Marshes and swamps (coastal salt). Limited to the higher zones of salt marsh habitat. Elevations: 0-98ft. (0 - 30 m.) Blooms May-Oct(Nov)	Low Potential	Suitable higher zones of salt marsh habitat is not present in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Deinandra paniculata paniculate tarplant	None/None G4/S4 4.2	Annual herb. Coastal scrub, valley and foothill grassland, vernal pools. Usually in vernally mesic sites. Sometimes in vernal pools or on mima mounds near them. Elevations: 80-3085ft. (25-940m.) Blooms (Mar)Apr-Nov.	Low Potential	Suitable vernal pool habitat may occur in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Delphinium parryi ssp. *blochmaniae* dune larkspur	None/None G4T2/S2 1B.2	Perennial herb. Chaparral, coastal dunes. On rocky areas and dunes. Elevations: 0-655ft. (0-200m.) Blooms Apr-Jun.	Low Potential	Suitable chaparral and coastal dune habitat does not occur in the study area. Suitable rocky areas do not occur in the study area. The elevation range of the study area is within the expected range of the species. The most recent CNDDB documented occurrence of the species within 2 miles of the study area is from 1943.

Erigeron blochmaniae Blochman's leafy daisy	None/None G2/S2 1B.2	Perennial rhizomatous herb. Coastal dunes, coastal scrub. Sand dunes and hills. Elevations: 10-150ft. (3-45m.) Blooms Jun-Aug.	Low Potential	Suitable coastal dune and coastal scrub habitat does not occur in the study area. Suitable hills may occur in the study area. The elevation range of the study area is within the expected range of the species. The most recent CNDDB documented occurrence of the species within 2 miles of the study area is from 1991.
Eriogonum elegans elegant wild buckwheat	None/None G4G5/S4S5 4.3	Annual herb. Cismontane woodland, valley and foothill grassland. Usually in sandy or gravelly substrates; often in washes, sometimes roadsides. Elevations: 655-5005ft. (200-1525m.) Blooms May-Nov.	No Potential	Suitable valley and foothill grassland and wash habitats occur in the study area. However, the elevation range of the study area is outside of the expected range of the species. There are no CNDDB documented occurrences of the species within 2 miles of the study area.
Erysimum suffrutescens suffrutescent wallflower	None/None G3/S3 4.2	Perennial herb. Chaparral, coastal bluff scrub, coastal dunes, coastal scrub. Coastal dunes and bluffs. Elevations: 0-490ft. (0-150m.) Blooms Jan-Jul(Aug).	Low Potential	Suitable chaparral, coastal bluff scurb, coastal dune, and coastal scrub habitat does not occur in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurences of the species within 2 miles of the study area.
Horkelia cuneata var. *puberula* mesa horkelia	None/None G4T1/S1 1B.1 USFS S	Perennial herb. Chaparral, cismontane woodland, coastal scrub. Sandy or gravelly sites. Elevations: 230-2660ft. (70-810m.) Blooms Feb-Jul(Sep).	Low Potential	Suitable chaparral, cismontane woodland, and coastal scrub habitats do not occur in the study area. Suitable sandy or gravelly sites may occur in the study area. The elevation range of the study area is within the expected range of the species. The most recent CNDDB documented occurrence of the species within 2 miles of the study area is from 1895.
Layia erubescens blushing layia	None/None G2/S2 1B.2	Coastal dunes, Coastal scrub. Openings, Sandy 10-245m. Blooms (Feb)Mar-May(Jun).	Low Potential	Suitable coastal dune and coastal scrub habitat does not occur in the study area. The elevation range of the study area is within the expected range of the species. The most recent CNDDB documented occurrence of the species within 2 miles of the study area is from 1937.

Leptosiphon grandiflorus large-flowered leptosiphon	None/None G3G4/S3S4 4.2	Annual herb. Cismontane woodland, closed-cone coniferous forest, coastal bluff scrub, coastal dunes, coastal prairie, coastal scrub, valley and foothill grassland. Open, grassy flats, generally sandy soil. 5-. Elevations: 15-4005ft. (5-1220m.) Blooms Apr-Aug.	Low Potential	Suitable valley and foothill grassland habitat occurs in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Lessingia tenuis spring lessingia	None/None G4/S4 4.3	Annual herb. Chaparral, cismontane woodland, lower montane coniferous forest. Openings. Elevations: 985-7055ft. (300-2150m.) Blooms May-Jul.	No Potential	Suitable chaparral, cismontane woodland, and lower montane coniferous forest habitats do not occur in the study area. The elevation range of the study area is not within the expected range of the species. There are no CNDDB documented occurrences of the species within 2 miles of the study area.
Monardella sinuata ssp. *sinuata* southern curly-leaved monardella	None/None G3T2/S2 1B.2	Annual herb. Chaparral, cismontane woodland, coastal dunes, coastal scrub. Sandy soils. Elevations: 0-985ft. (0-300m.) Blooms Apr-Sep.	Low Potential	Suitable chaparral, cismontane woodland, coastal dune, and coastal scrub habitats do not occur in the study area. The elevation range of the study area is within the expected range of the species. The most recent CNDDB documented occurrence of the species within 2 miles of the study area is from 1895.
Navarretia fossalis spreading navarretia	FT/None G2/S2 1B.1	Chenopod scrub, Marshes and swamps (shallow freshwater), Playas, Vernal pools. San Diego hardpan and San Diego claypan vernal pools; in swales and vernal pools, often surrouded by other habitat types. Elevations: 49-2789 ft. (15-850 m.) Blooms Apr-Jun.	Low Potential	Suitable vernal pool habitat may be present in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Rorippa gambellii Gambel's watercress	FE/ST G1/S1 1B.1	Marshes and swamps (brackish, freshwater). Freshwater and brackish marshes at the margins of lakes and along streams, in or just above the water level. Elevations: 16-1083t. (5-330 m.) Blooms Apr-Oct.	No Potential	Suitable marsh and swamp habitat do not occur in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Senecio blochmaniae Blochman's ragwort	None/None G3/S3 4.2	Perennial herb. Coastal dunes. Elevations: 0-330ft. (0-100m.) Blooms May-Oct.	No Potential	Suitable coastal dune habitat does not occur in the study area. The elevation range of the study area is within the expected range of the species. However, there are no CNDDB documented occurrences of the species within 2 miles of the study area.
Invertebrates				

Branchinecta lynchi vernal pool fairy shrimp	FT/None G3/S3	Endemic to the grasslands of the Central Valley, Central Coast mountains, and South Coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	Moderate Potential	Suitable vernal pool habitat may occur in the study area. There are 3 recent CNDDB documented occurrences of the species within 5 miles of the study area from 2006 and 2010.
Danaus plexippus plexippus pop. 1 monarch - California overwintering population	FPT/None G4T1T2Q/S2 USFS S	Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico. Roosts located in wind-protected tree groves (eucalyptus, Monterey pine, cypress), with nectar and water sources nearby.	Moderate Potential	Suitable winter roost sites may occur in the study area. There is a recent CNDDB documented occurrence of the species within 5 miles of the study area from 2022.
Fishes				
Eucyclogobius newberryi tidewater goby	FE/None G3/S3 CDFW SSC	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River. Found in shallow lagoons and lower stream reaches, they need fairly still but not stagnant water and high oxygen levels.	No Potential	Suitable brackish water habitat does not occur in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Amphibians				
Ambystoma californiense pop. 2 California tiger salamander - Santa Barbara County DPS	FE/ST G2G3T2/S2 CDFW WL	Lives in vacant or mammal-occupied burrows throughout most of the year; in grassland, savanna, or open woodland habitats. Need underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	Moderate Potential	Suitable vernal pool and upland habitats may occur in the study area. However, the most recent CNDDB documented occurrence of the species within 5 miles of the study area is from 1995.
Anaxyrus californicus arroyo toad	FE/None G2G3/S2 CDFW SSC	Semi-arid regions near washes or intermittent streams, including valley-foothill and desert riparian, desert wash, etc. Rivers with sandy banks, willows, cottonwoods, and sycamores; loose, gravelly areas of streams in drier parts of range.	Moderate Potential	Suitable wash and river habitats occur in the study area. However, the most recent CNDDB documented occurrence of the species within 5 miles of the study area is from 1992.
Rana boylii foothill yellow-legged frog	None/SE G3/S3 CDFW SSC USFS S	Partly-shaded, shallow streams and riffles with a rocky substrate in a variety of habitats. Needs at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis.	No Potential	Suitable aquatic habitat is likely not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Rana draytonii California red-legged frog	FT/None G2G3/S2S3 CDFW SSC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	Moderate Potential	Suitable lowland and foothill habitats in or near permanent sources of deep water with dense, shrubby, or emergent riparian vegetation does not occur in the study area. There is a recent CNDDB documented occurrence of the species within 5 miles of the study area from 2003.

Spea hammondii western spadefoot	FPT/None G2G3/S3S4 CDFW SSC	Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands. Vernal pools are essential for breeding and egg-laying.	Moderate Potential	Suitable grassland and vernal pool habitats may occur in the study area. There are 3 recent CNDDB documented occurrences of the species within 5 miles of the study area from 2001 and 2004.
Reptiles				
Actinemys pallida southwestern pond turtle	FPT/None G2G3/SNR CDFW SSC USFS S	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying. Occurs in southern California from Monterey County south to Los Angeles, Riverside, and San Diego Counties into northern Baja California, Mexico.	Low Potential	Suitable aquatic habitat is likely not present in the study area. The most recent CNDDB documented occurrence of the species within 5 miles of the study area is from 1995.
Anniella pulchra Northern California legless lizard	None/None G3/S2S3 CDFW SSC USFS S	Sandy or loose loamy soils under sparse vegetation. Soil moisture is essential. They prefer soils with a high moisture content.	Moderate Potential	Suitable sandy or loose loamy soils under sparse vegetation with high moisture content may be present in the study area. There are 5 recent CNDDB documented occurrences of the species within 5 miles of the study area from 2009, 2010, 2012, 2016, and 2019.
Phrynosoma blainvillii coast horned lizard	None/None G4/S4 CDFW SSC	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes. Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	Moderate Potential	Suitable sandy wash habitat is present in the study area. There are 3 recent CNDDB documented occurrences of the species within 5 miles of the study area from 2008 and 2015.
Birds				
Agelaius tricolor tricolored blackbird	None/ST G1G2/S2 CDFW SSC USFWS BCC	Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	Low Potential	Suitable open water habitat is not present in the study area. Suitable nesting and foraging habitat may be present in the study area. The most recent CNDDB documented occurrence of the species within 5 miles of the study area is from 1992.
Aquila chrysaetos golden eagle	None/None G5/S3 CDFW FP CDFW WL	Rolling foothills, mountain areas, sage-juniper flats, and desert. Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.	Low Potential	Suitable foothill habitat may be present in the study area. Suitable nesting habitat may also be present in the study area. However, the study area is largely developed. There are no CNDDB documented occurrences of the species within 5 miles of the study area.

Athene cunicularia burrowing owl	None/SCE G4/S2 CDFW SSC USFWS BCC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Moderate Potential	Suitable grassland with low-growing vegetation is present in the study area. Suitable burrowing habitat is present in the study area. There are 2 recent CNDDB documented occurrences of the species within 5 miles of the study area from 2003 and 2009.
Baeolophus inornatus oak titmouse	None/None G4/S4 USFWS BCC	Oak woodlands. Cavity nester. Many will use scrub oaks or other brush as long as woodlands are nearby. Mostly live in warm, open, dry oak or oak-pine woodlands.	No Potential	Suitable oak woodland habitat does not occur in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Brachyramphus marmoratus marbled murrelet	FT/SE G3/S2	Feeds near-shore; nests inland along coast from Eureka to Oregon border and from Half Moon Bay to Santa Cruz. Nests in old-growth redwood-dominated forests, up to six miles inland, often in Douglas-fir.	Low Potential	Suitable nesting habitat is likely not present in the study area. Transient species may be present in the study area. However, there are no CNDDB documented occurrences of the species within 5 miles of the study area.
Circus hudsonius northern harrier	None/None G5/S3 CDFW SSC USFWS BCC	Coastal salt and freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas. Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas.	Low Potential	Suitable coastal salt and freshwater marsh habitat Is not present in the study area. Suitable nesting habitat may be present in the study area. However, there are no CNDDB documented occurrences of thes species within 5 miles of the study area.
Contopus cooperi olive-sided flycatcher	None/None G4/S3 CDFW SSC USFWS BCC	Nesting habitats are mixed conifer, montane hardwood-conifer, Douglas-fir, redwood, red fir and lodgepole pine. Most numerous in montane conifer forests where tall trees overlook canyons, meadows, lakes or other open terrain.	No Potential	Suitable nesting habitat is likely not present in the study area. Suitable montane coniferous forest habitat is not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.

Empidonax traillii extimus southwestern willow flycatcher	FE/SE G5T2/S3	Riparian woodlands in Southern California. For nesting, requires dense riparian habitats with cottonwood/willow and tamarisk vegetation. Saturated soils, standing water or nearby streams, pools, or cienegas are a component of nesting habitat.	No Potential	Suitable riparian woodland habitat is not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Geothlypis trichas sinuosa common yellowthroat	None/None G5T3/S3 CDFW SSC USFWS BCC	Resident of the San Francisco Bay region, in fresh and salt water marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	No Potential	Suitable fresh and saltwater marsh habitat is not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Gymnogyps californianus California condor	FE/SE G1/S2 CDFW FP	Require vast expanses of open savannah, grasslands, and foothill chaparral in mountain ranges of moderate altitude. Deep canyons containing clefts in the rocky walls provide nesting sites. Forages up to 100 miles from roost/nest.	No Potential	Suitable vast expanses of open grassland habitat is not present in the study area. There are no CNDDB documented occurences of the species within 5 miles of the study area.
Haliaeetus leucocephalus bald eagle	FD/SE G5/S3 CDFW FP USFS S	Ocean shore, lake margins, and rivers for both nesting and wintering. Most nests within 1 mile of water. Nests in large, old-growth, or dominant live tree with open branches, especially ponderosa pine. Roosts communally in winter.	Low Potential	Suitable nesting habitat may be present in the study area. However, the study area is largely developed. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Laurs californicus California gull	None/None G5/S4 CDFW WL USFWS BCC	Littoral waters, sandy beaches, waters and shorelines of bays, tidal mud-flats, marshes, lakes, etc. Colonial nester on islets in large interior lakes, either fresh or strongly alkaline.	Low Potential	Suitable littoral waters, waters and shorelines of bays, tidal mud-flats, marshes, and lake habitats are not present in the study area. Suitable nesting habitat is also not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.

Passerculus sandwichensis beldingi Belding's savannah sparrow	None/SE G5T3/S3 USFWS BCC	Inhabits coastal salt marshes, from Santa Barbara south through San Diego County. Nests in Salicornia on and about margins of tidal flats.	No Potential	Suitable coastal salt marsh habitat and nesting habitat are not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Pica nuttalli yellow-billed magpie	None/None G3G4/S3S4 USFWS BCC	Central Valley and coastal mountain ranges from south of San Francisco to Santa Barbara County. Open oak and riparian woodland, farm and ranchland or urban areas with tall trees near grassland, pasture or cropland.	Low Potential	Suitable farm, ranchland, and urban habitats with tall trees near grassland, pasture, or cropland is present in the study area. However, there are no CNDDB documented occurrences of the species within 5 miles of the study area.
Rallus obsoletus obsoletus California Ridgway's rail	FE/SE G3T1/S2 CDFW FP	Salt water and brackish marshes traversed by tidal sloughs in the vicinity of San Francisco Bay. Associated with abundant growths of pickleweed, but feeds away from cover on invertebrates from mud-bottomed sloughs.	No Potential	Suitable salt water and brackish marsh habitat is not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Rynchops niger black skimmer	None/None G5/S2 CDFW SSC USFWS BCC	Nests on gravel bars, low islets, and sandy beaches, in unvegetated sites. Nesting colonies usually less than 200 pairs.	Low Potential	Suitable nesting habitat may be present in the study area. However, the study area is largely developed. There are no CNDDB documented occurrences of the species within 5 miles of the study area.
Spinus lawrencei Lawrence's goldfinch	None/None G3G4/S4 USFWS BCC	Nests in open oak or other arid woodland and chaparral, near water. Nearby herbaceous habitats used for feeding. Closely associated with oaks.	Low Potential	Suitable nesting habitat is not present in the study area. Suitable foraging habitat is also not present in the study area. There are no CNDDB documented occurrences of the species within 5 miles of the study area.

Vireo bellii pusillus least Bell's vireo	FE/SE G5T2/S3	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	Low Potential	Suitable dry river bottom habitat below 2000 feet is present in the study area. Suitable nesting habitat may also be present in the study area. However, there are no CNDDB documented occurrences of the species within 5 miles of the study area.
Mammals				
Antrozous pallidus pallid bat	None/None G4/S3 CDFW SSC USFS S WBWG High	Found in a variety of habitats including deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts in crevices of rock outcrops, caves, mine tunnels, buildings, bridges, and hollows of live and dead trees which must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	Low Potential	Suitable grassland, shrubland, and roosting habitats are present in the study area. However, the most recent CNDDB documented occurrence of the species within 5 miles of the study area is from 1994.
Taxidea taxus American badger	None/None G5/S3 CDFW SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	Low Potential	Suitable habitat with friable soils is present in the study area. Suitable foraging habitat may not be present in the study area. The most recent CNDDB documented occurrence of the species within 5 miles of the study area is from 1991.
Sensitive Natural Communities				
Southern Vernal Pool	None/None GNR/SNR

WSC Technical Memorandum

Technical Memorandum

Date:	12/16/2024
To:	Raimi & Associates
Prepared By:	Cason Roberts, Stephanie Ard, PE
Reviewed By:	Joshua Reynolds, PE
Project:	Santa Maria General Plan Update
Subject:	Annexation Study

1.0 Introduction

This technical memorandum provides foundational background analysis for the City of Santa Maria's Sphere of Influence (SOI) and Annexation applications. The purpose of this analysis is to support the City in evaluating the capacity of its existing water and wastewater systems to meet current and future needs, including potential annexation areas.

The memorandum is organized as follows:

- Present and Probable Needs
- Capacity Analysis of Sewer and Water Facilities
- Recommended Infrastructure to Support Annexation Area

2.0 Present and Probable Needs

This section addresses SOI Section 10.B: “Present and probable needs for sewer and water facilities.” It is divided into two primary parts: one focusing on the present water and sewer system needs and the other summarizes the projected buildout needs.

2.1 Present Needs

Table 2.1 summarizes the City’s current water system demand. System demand represents the total quantity of water used, encompassing customer consumption, authorized non-customer usage, and distribution losses. This demand is calculated by summing supply data from all sources over a calendar year, covering the years 2020 through 2023, with an average calculated over this period.

Table 2.1 Current System Water Demand in acre-feet per year

	2020	2021	2022	2023	Average
Annual Water Demand (AFY)[1]	13,106	13,091	12,515	12,597	12,827

[1] System-wide demand calculated from total water production data provided by the City.

Table 2.2 summarizes the City's current wastewater flow, based on influent data from the City's Wastewater Treatment Plant (WWTP) for the years 2019 through 2023.

Table 2.2 Existing Wastewater Flow in million gallons per day

	2019	2020	2021	2022	2023	Average
Annual Wastewater Flow at WWTP (mgd)[1]	6.80	7.30	6.95	7.31	7.7	7.2

[1] Flow data provided by the City.

2.2 Probable Buildout Needs

Water demand and wastewater flow at buildout was estimated by multiplying the average annual per capita need with the population expected at buildout. The population at buildout was estimated based on the existing and proposed housing units within City limits, proposed housing units in the annexation area, and a persons per household factor of 3.76 sourced from US Census data. Table 2.3 shows the projected housing units and population at buildout.

Table 2.3 Projected Population at Buildout

	Housing Units [1]	Population [2,3]
Existing in City Limits	29,860	112,273
Proposed in City Limits	12,260	46,098
Proposed in Annexation	3,880	14,589
Total at Buildout	46,000	172,960

[1] Total household units at buildout per City staff.
[2] 3.73 person per household sourced from census.gov (United States Census Bureau, 2024)
[3] Total population at buildout calculated as the total housing units at buildout multiplied by the persons per housing unit factor.

The water demand at buildout was estimated by combining the projected demand from proposed growth with the existing water demand. The projected demand was determined using the anticipated population growth and a per capita water use factor of 109 gallons per person per day (gpcd) as indicated in the City's 2020 Urban Water Management Plan (UWMP). This water demand factor was used because the UWMP is the City's most recently published planning document. Table 2.4 summarizes the projected buildout water demand for the City and the annexation area.

Table 2.4 Buildout System Water Demand

	Population	Annual Water Demand	
		gpd	AFY
Existing in City Limits[1]	112,273	11,451,208	12,827
Proposed in City Limits[2]	46,098	5,024,638	5,628
Proposed in Annexation[2]	14,589	1,590,179	1,781
Total at Buildout	172,960	18,852,640	20,236

[1] Existing Annual Water Demand is based on historical data as presented in Table 2.1.
[2] Water demand projections assume 109 gpcd to be consistent with the City's 2020 UWMP.

Similar to the water demand projections, sewer flow at buildout was estimated by combining the projected flows from proposed growth with the existing sewer flows. The projected flow was determined based on the anticipated population growth and a per capita flow factor of 66.1 gpcd. This factor was selected as it aligns with the City's draft Wastewater Treatment Plant Master Plan, currently in development. Table 2.5 summarizes the projected wastewater flow at buildout.

Table 2.5 Projected Wastewater Flow at Buildout

	Population	Annual Water Demand[1]	
		gpd	mgd
Existing in City Limits[1]	112,273	7,200,000	7.20
Proposed in City Limits[2]	46,098	3,047,051	3.05
Proposed in Annexation[2]	14,589	964,320	0.96
Total at Buildout	172,960	11,211,371	11.21

[1] Existing sewer flow is based on historical data as presented in Table 2.2.
[2] Sewer flow projections assume 66.1 gpcd per the City's draft WWTP Master plan.

3.0 Capacity Analysis of Sewer and Water Facilities

This section addresses SOI Section 10.C, which evaluates the "Present capacity of sewer and water facilities and adequacy of sewer and water facilities the affected agency provides or is authorized to provide." The City's water and wastewater system capacities are analyzed and compared to current and projected needs below.

3.1 Water System Capacity

This analysis evaluates the City's water system capacity in terms of supply, storage, and distribution.

3.1.1 Supply Capacity

The supply capacity of the City's water system was assessed for normal, single dry, and multiple dry year conditions. Available supply under each scenario is based on the City's 2020 Urban Water Management Plan (UWMP). (Provost & Pritchard Consulting Group, 2021)

Tables 3.1, 3.2, and 3.3 present the available supply under each scenario. All scenarios show the City having sufficient supply to meet demand. The City anticipates that annexation will include the transfer of water rights sufficient to reliably offset the increased demand created by the annexation, thereby increasing the City's available supply.

Table 3.1. Normal Year Water Supply Capacity

	2025	2030	2035	2040	2045	Buildout
Available Supply (AFY)	36,558	36,403	36,250	36,095	35,941	35,941
Projected Demand (AFY)	15,026	17,247	17,869	18,490	18,716	20,237
Surplus/(Deficit) (AFY)	21,532	19,156	18,381	17,605	17,225	15,704

Table 3.2. Single Dry Year Water Supply Capacity

	2025	2030	2035	2040	2045	Buildout
Water Supply Total (AFY)	26,419	26,571	26,724	26,876	27,029	27,029
Projected Demand (AFY)	15,026	17,247	17,869	18,490	18,716	20,237
Surplus/(Deficit) (AFY)	11,393	9,324	8,855	8,386	8,313	6,792

Table 3.3 Multiple Dry Year Water Supply Capacity

		2025	2030	2035	2040	2045	Buildout
1st Year	Supply totals[1]	29,189	29,662	30,136	30,610	31,084	31,084
	Demand totals[1]	15,026	17,247	17,869	18,490	18,716	20,237
	Surplus/(Deficit)	14,163	12,415	12,267	12,120	12,368	10,847
2nd Year	Supply totals[1]	29,605	28,989	28,374	27,758	27,143	27,143
	Demand totals[1]	15,026	17,247	17,869	18,490	18,716	20,237
	Surplus/(Deficit)	14,579	11,742	10,505	9,268	8,427	6,906
3rd Year	Supply totals[1]	27,169	26,417	25,665	24,913	24,161	24,161
	Demand totals[1]	15,026	17,247	17,869	18,490	18,716	20,237
	Surplus/(Deficit)	12,143	9,170	7,796	6,423	5,445	3,924
4th Year	Supply totals[1]	30,126	30,121	30,116	30,111	30,106	30,106
	Demand totals[1]	15,026	17,247	17,869	18,490	18,716	20,237
	Surplus/(Deficit)	15,100	12,874	12,247	11,621	11,390	9,869
5th Year[2]	Supply totals[1]	25,180	25,180	25,180	25,180	25,180	25,180
	Demand totals[1]	15,026	17,247	17,869	18,490	18,716	20,237
	Surplus/(Deficit)	10,154	7,933	7,311	6,690	6,464	4,943

[1] Supply and demand values are in acre-feet.

[2] Fifth year demand values have been revised from what is in the UWMP to match those in the first through fourth year scenarios because the UWMP inexplicably shows an increase in demand in the fifth year of a drought.

3.1.2 Storage Capacity

The City's storage capacity was assessed based on the 2012 UCS. Usable storage volume is approximately 18 MG, distributed across three reservoirs.

Table 3.5 presents current and buildout storage requirements, including operational, fire flow, and emergency storage needs. The operational and emergency storage volumes are calculated as factors of ADD and PHD compared to reliable well capacity. The fire flow storage volume is calculated based on the City's largest fire flow. (Water Systems Consulting (WSC), Inc, 2015)

To meet buildout needs, storage improvements will be required, as indicated in the 2012 UCS. The 2012 UCS recommended increasing the number of generators in the distribution system from 3 to 5. This analysis found that 5 generators would be sufficient with the addition of the annexed areas. This analysis is summarized in Table 3.6.

Table 3.5. Existing Storage Requirements with Annexation

Storage Component	Required Volume (in million gallons)		
	Existing	Buildout (no improvements)	Buildout (with 5 Generators)
Operational Storage[1]	3.2	5.0	3.9
Fire Flow Storage[2]	0.7	0.7	0.7
Emergency Storage[3]	4.4	14.5	1.1
Total (MG) =	8.3	20.2[4]	5.7

[1] Calculated as 4 hours of PHD minus existing reliable well capacity. Note that the MDD peaking factor was calculated from 2023 production data while the PHD peaking factor was taken from the California Department of Public Health's criteria.

[2] Assumes a fire flow of 3,000 gpm for 4 hours.

[3] Calculated as 2 days of ADD minus existing reliable well capacity.

[4] Required volumes at buildout are greater than available storage volume.

3.1.3 Distribution System Capacity

Once an annexation area is determined, the City's hydraulic model will be used to analyze the system's capability to meet this increased demand. The City's water system is well looped, has average system pressures between 60 and 80 psi, and has a strong background of mains that are 18-inch diameter or greater. These factors indicate that the distribution system is adequately sized to provide maximum day demand + fire flows under existing plus annexation demands. Minor distribution system improvements may be recommended to meet build-out demands.

3.2 Wastewater System Capacity

The wastewater capacity analysis evaluates both the WWTP and the wastewater collection system.

3.2.1 Wastewater Treatment Plant Capacity

The City's current WWTP capacity is 8.0 mgd (California Regional Water Quality Control Board, Central Coast Region, 2010). Table 3.8 compares the current WWTP capacity to various flow conditions.

Table 3.8. WWTP Capacity Evaluation

	Existing	Existing + Annexation	Buildout + Annexation
WWTP Capacity (mgd)	8.0	8.0	8.0
System Flow (mgd)	7.2	8.2	11.2
Surplus/(Deficit) (mgd)	0.8	(0.2)	(3.2)

The City is currently updating its wastewater treatment plant master plan and has submitted a time schedule compliance plan to the Regional Water Quality Control Board with timelines for upgrading and expanding the existing WWTP to meet more strict discharge requirements and increased flows due to annexation and buildout. Based on this draft master plan, the WWTP will be expanded in two phases. The first phase, expected to be complete in 2032, will increase the WWTP's capacity to 10 mgd. The second phase, expected to be complete in 2052, will further increase the WWTP's capacity to 11.5 mgd. Buildout flows, including annexation, are projected at 11.2 mgd, so no additional improvements will be necessary.

3.2.2 Wastewater Collection System

The annexation will increase wastewater flows and likely require upgrades to the City's collection system. The existing collection system experiences some capacity issues, specifically in pipes near the WWTP, which can experience surcharging during high flows. The annexation will require either upsizing the City's existing trunk lines between the annexation area and the WWTP or the installation of dedicated sewer trunk lines from the annexation area to the WWTP. Final annexation details will determine specific improvements.

4.0 Recommended Infrastructure to Support Annexation Area

This section addresses requirements outlined in Annex Section 14.B, "Describe the level and range of the proposed sewer and water infrastructure," and Annex Section 14.D, "Indicate any improvements or upgrading of sewer and water facilities that will be required."

4.1 Proposed Infrastructure for Annexation Area

The annexation area will be developed with essential infrastructure, including water distribution system piping, valves, and other components, as well as wastewater collection system piping, manholes, and related appurtenances. Both water and wastewater systems will be integrated into the City's existing infrastructure, designed to support reliable service to the annexation area.

4.2 Required Improvements of Existing Systems

For the water system, no substantial improvements are anticipated. The current system has adequate supply and storage capacity to accommodate the annexation area, and the areas under consideration fall within the City's existing pressure zone, eliminating the need for additional capacity adjustments.

The wastewater system, however, will likely require the construction of a new sewer trunk line extending approximately 6.5 to 8.5 miles to effectively serve the annexation area. Additionally, if development proceeds rapidly, the City's WWTP may require upgrades to meet the increased

demand from both the annexation area and future growth within the City, ensuring sufficient treatment capacity for planned expansion.

Mitigation Monitoring and Reporting Program

Mitigation Monitoring and Reporting Program

Statutory Requirements

When a Lead Agency makes findings on significant environmental effects identified in an Environmental Impact Report (EIR), the agency must also adopt a "reporting or monitoring program for the changes to the project which it has adopted or made a condition of approval in order to mitigate or avoid significant effects on the environment" (Public Resources Code [PRC] Section 21081.6(a) and California Environmental Quality Act [CEQA] Guidelines Sections 15091(d) and 15097). The Mitigation Monitoring and Reporting Program (MMRP) is implemented to ensure that the mitigation measures and project revisions identified in the EIR are implemented. Therefore, the MMRP must include all changes in the proposed project either adopted by the project proponent or made conditions of approval by the Lead or Responsible Agency.

Administration of the Mitigation Monitoring and Reporting Program

The City of Santa Maria (City) is the Lead Agency responsible for the adoption and implementation of the MMRP. According to State CEQA Guidelines Section 15097(a), a public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity that accepts the delegation. The City may delegate responsibility for verifying and documenting compliance with the MMRP to an Applicant as coordinator of the project and its construction, and the Applicant will be responsible for compliance. However, until mitigation measures have been completed, the City, as the Lead Agency, remains responsible for ensuring that the implementation of the measures occurs in accordance with the program.

Mitigation Measures

Table ES-1 is structured to enable quick reference to mitigation measures and the associated monitoring program based on the environmental resource. The numbering of mitigation measures correlates with numbering of measures found in Chapter 4, Environmental Impact Analysis, of the EIR.

This page intentionally left blank.

Table ES-1 Mitigation Monitoring and Reporting Plan

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
Air Quality and Greenhouse Gas Emissions						
AQGHG-2 Project-Level Air Quality Analysis and Mitigation. The City shall require, where it is determined as necessary, applicants for future discretionary development projects facilitated by the 2045 General Plan Update to prepare a project-specific air quality analysis in accordance with SBCAPCD Environmental Review Guidelines. The analysis shall quantify construction and operational emissions and compare estimated emissions to the SBCAPCD's adopted thresholds of significance for criteria air pollutants. If the analysis determines that emissions would exceed any of the applicable thresholds, the project applicant shall implement all feasible mitigation measures to reduce emissions to below the thresholds. All mitigation measures shall be documented and verified by the lead agency prior to project approval or issuance of grading/building permits.	The project applicant shall submit all mitigation measures to the lead agency for review and approval prior to project approval or issuance of grading/building permits.	The lead agency shall verify compliance with mitigation measures during construction.	Lead agency			
AQGHG-3 Construction Equipment Exhaust Control Measures. For individual discretionary and ministerial residential projects facilitated by the 2045 General Plan Update that would develop three or more units; would involve demolition, mass grading, or excavation and trenching phases longer than two months; and would be located within 1,000 feet of existing sensitive receptors, the City shall enforce a project specific Condition of Approval requiring the following: a. Off-road diesel equipment 25 horsepower (hp) or greater shall be equipped with engines compliance with, or certified to meet or exceed, the California Air Resources Board's Tier 4 Final engine emissions standards. Where available, off-road construction equipment should be zero-emission. Alternative/renewable fuels such as compressed natural gas, liquefied natural gas, or propane should be utilized to the maximum extent feasible when zero-emission is not available. Commitments to Tier 4 and/or zero-emission equipment shall be included in applicable bid documents, purchase orders, and contracts; successful contractors shall demonstrate the ability to supply the compliant construction equipment for use prior to ground-disturbing and construction activities. b. All portable generators shall be powered by a source other than diesel fuel or gasoline (i.e. battery, natural gas, propane etc.).	The project applicant shall submit the construction equipment exhaust control documentation to the City for review and approval prior to project approval or issuance of grading and construction permits.	City staff shall spot check for compliance during construction.	City of Santa Maria			
Biological Resources						
BIO-1(a) Biological Resources Screening and Assessment. For development facilitated by the plan within undeveloped parcels, prior to construction activities and if determined necessary based on preliminary review conducted by City Staff, the City shall require project applicants to engage a qualified biologist (having the appropriate education and experience level) to perform a baseline Biological Resources Screening and Assessment to determine whether projects proposed within undeveloped parcels have any potential to impact special-status biological resources, inclusive of special-status plants and animals, sensitive vegetation communities (including vernal pools and other wetlands), and critical habitat. If it is determined that the project has no potential to impact biological resources, no further action is required. If the project would have the potential to impact biological resources, prior to construction, a qualified biologist shall conduct a project-specific biological analysis to document the existing biological resources within a project footprint plus a minimum buffer of 500 feet around the project footprint, as is feasible, and to determine the potential impacts to those resources. The project-specific biological analysis shall evaluate the potential for impacts to all biological resources including, but not limited to special-status species, nesting birds, wildlife movement, sensitive plant communities, critical habitats, and other resources judged to be sensitive by local, state, and/or federal agencies. If the project would have the potential to impact these resources, the following mitigation measures (Mitigation Measures BIO-1[b] through BIO-1[k]) shall be incorporated, as applicable, to reduce impacts to a less than significant level. Pending the results of the project-specific biological analysis, design alterations, further technical studies (e.g., protocol surveys) and consultations with the USFWS, CDFW, and/or other local, state, and federal agencies may be required. Note that specific surveys described in the mitigation measures below may be completed as part of the project-specific biological analysis where suitable habitat is present.	The applicant shall submit the results of the baseline Biological Resources Screening and Assessment to the City prior to project approval or issuance of grading and construction permits. If required, the applicant shall submit the biological assessment to the City prior to project approval or issuance of grading and construction permits.	The City shall ensure that the applicable biological resource assessment has been completed and provide confirmation of compliance with the conditions outlined in the measure.	City of Santa Maria			
BIO-1(b) Special-status Plant Species Surveys. For development facilitated by the plan where the project-specific Biological Resources Screening and Assessment (Mitigation Measure BIO-1[a]) determines that there is potential for significant impacts to federally or state-listed plants or regional population level impacts to species with a CRPR of 1B or 2B from project development, a qualified biologist shall complete surveys for special-status plants prior to any vegetation removal, grubbing, or other construction activity (including staging and mobilization). The surveys shall be floristic in nature and shall be seasonally timed to coincide with the target species. All plant surveys shall be conducted by a qualified biologist during the blooming season prior to development permit approval. All special-status plant species identified on site shall be mapped onto a site-specific aerial photograph or topographic map with the use of Global Positioning System unit. Surveys shall be conducted in accordance with the most current protocols established by the CDFW, USFWS, and the local jurisdictions if said protocols exist. A report of the survey results shall be submitted to the City, and the CDFW and/or USFWS, as appropriate, for review and/or approval. If special-status plants are not found during special-status plant surveys, no further action is required. If federally- and/or state-listed individuals and/or CRPR 1B or 2B plant populations are found during special-status plant surveys, the Mitigation Measures BIO-1(c) and BIO-1(d) shall be implemented.	The applicant shall submit the survey results to the City and CDFW and/or USFWS, as appropriate, for review and/or approval prior to project approval or issuance of grading and construction permits.	The City and CDFW and/or USFWS, as appropriate, shall review the survey results and provide confirmation of compliance with the conditions outlined in the measure.	City of Santa Maria; CDFW; USFWS			

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
BIO-1(c) Special-status Plant Species Avoidance, Minimization, and Mitigation. If federally-listed and/or state-listed individuals, and/or CRPR 1B or 2 plant populations are found during special-status plant surveys (pursuant to Mitigation Measure BIO-1[b]) and would be directly impacted by development, then the project shall be re-designed to avoid impacting listed plant species or CRPR 1B or 2 populations, where feasible. Rare and listed plant occurrences that are not within the immediate disturbance footprint but are located within 50 feet of disturbance limits shall have bright orange protective fencing installed at least 30 feet beyond their extent, or other distance as approved by a qualified biologist, to protect them from harm. Prior to initiation of construction activities the project proponent shall submit a site plan depicting the location(s) of special-status plants and avoidance buffers to the City for review and approval. If special-status plants can be avoided, no further action is required. If federally- and/or state-listed individuals and/or CRPR 1B or 2 plant populations cannot be avoided, then Mitigation Measure BIO-1(d) shall be implemented.	The applicant shall submit a site plan depicting the location(s) of special-status plants and avoidance buffers to the City for review and approval prior to the issuance of grading or construction permits.	The City shall review the site plan and avoidance buffers and provide confirmation of compliance with the conditions outlined in the measure.	City of Santa Maria			
BIO-1(d) Habitat Mitigation and Monitoring Plan. If federally- and/or state-listed plants, non-listed special-status plant populations, sensitive natural communities, or waters of the US and/or State cannot be avoided and will be impacted by development facilitated by the plan, the City shall require mitigation at a minimum ratio of 1:1 per acre of impact (and 1:1 per tree), to be determined in coordination with CDFW and USFWS as and if applicable, for each species as a component of habitat restoration. A habitat mitigation and monitoring plan (HMMP) shall be prepared by a qualified biologist and submitted to the City for review and approval. The HMMP shall include, at a minimum, the following components. 1. Description of the project/impact site (i.e., location, responsible parties, areas to be impacted by habitat type). 2. Goal(s) of the compensatory mitigation project (type[s] and area[s]) of habitat to be established, restored, enhanced, and/or preserved; specific functions and values of habitat type[s] to be established, restored, enhanced, and/or preserved). 3. Description of the proposed compensatory mitigation site (location and size, ownership status, existing functions, and values). 4. Implementation plan for the compensatory mitigation site (rationale for expecting implementation success, responsible parties, schedule, site preparation, planting plan). 5. Maintenance activities during the monitoring period, including weed removal as appropriate (activities, responsible parties, schedule). 6. Monitoring plan for the compensatory mitigation site, including no less than quarterly monitoring for the first year (performance standards, target functions and values, target acreages to be established, restored, enhanced, and/or preserved, annual monitoring reports). 7. Success criteria based on the goals and measurable objectives; said criteria to be, at a minimum, at least 80 percent survival of container plants and 30percent relative cover by vegetation type or other industry standards as determined by a qualified restoration specialist. 8. An adaptive management program and remedial measures to address any shortcomings in meeting success criteria. 9. Notification of completion of compensatory mitigation and agency confirmation. 10. Contingency measures (initiating procedures, alternative locations for contingency compensatory mitigation, funding mechanism). 11. All nursery plants used in restoration shall be inspected for sudden oak death. If a federally and/or state-listed plant species has the potential be impacted, an HMMP shall be submitted to the USFWS and/or CDFW for review, and federal and/or state take authorization may be required by these agencies. Within 30 days of completion of monitoring, a final monitoring report shall be submitted to the City for review and approval, documenting compliance with the HMMP and achievement of success criteria.	The applicant shall submit the HMMP to the City, and CDFW and/or USFWS, as applicable, for review and approval prior to the issuance of grading and construction permits. Within 30 days of completion of monitoring, a final HMMP monitoring report shall be submitted to the City for review and approval, documenting compliance with the HMMP and achievement of success criteria.	The City, CDFW and/or USFWS shall review and approve the HMMP for compliance prior to issuance of the grading and construction permits.	City of Santa Maria			
BIO-1(e) Endangered/Threatened Special-status Species Habitat Assessments and Protocol Surveys. For development facilitated by the plan where the project-specific biological analysis (Mitigation Measure BIO-1[a]) determines that suitable habitat may be present for federal- or state-listed, candidate, or proposed species, the City shall require protocol habitat assessments/surveys be completed in accordance with current CDFW and/or USFWS protocols prior to issuance of any construction permits. If, through consultation with the CDFW and/or USFWS, it is determined that protocol habitat assessments/surveys are not required, the project applicant shall be required to complete and document this consultation and submit it to the City prior to issuance of any construction permits. Each protocol has different survey and timing requirements. The applicant shall be responsible for ensuring they understand the protocol requirements and shall hire a qualified biologist to conduct protocol surveys. (Note: if a federally and/or state-listed wildlife species will be impacted, federal and/or state take authorization may be required by USFWS and CDFW.)	The applicant shall submit results of required protocol survey(s) and consultation with CDFW and/or USFWS to the City for review and approval prior to the issuance of any grading and construction permits.	The City shall review the survey results and provide confirmation of compliance with the conditions outlined in the measure	City of Santa Maria			
BIO-1(f) Endangered/Threatened Animal Species Avoidance and Minimization. For development facilitated by the plan where potential impacts to aquatic and/or terrestrial animal species are identified by the project specific Biological Resources Screening and Assessment required under Mitigation Measure BIO-1(a), the following measures shall be applied.	These measures shall be implemented during grading and construction activities. The applicant shall provide monthly maintenance reports during construction to the City	City staff shall spot check for compliance during construction.	City of Santa Maria			

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
1. Ground disturbance shall be limited to the minimum necessary to complete the project. A qualified biologist shall flag the project limits of disturbance. Areas of special biological concern within or adjacent to the limits of disturbance shall have highly visible orange construction fencing installed between said area and the limits of disturbance. 2. All projects occurring within/adjacent to aquatic habitats (including riparian habitats and wetlands) shall be completed between April 1 and October 31,if feasible, to avoid impacts to sensitive aquatic species. Any work outside these dates would require project-specific approval from the City and maybe subject to regulatory agency approval. 3. All projects occurring within or adjacent to sensitive habitats that may support federally and/or state-listed endangered/threatened species shall have a CDFW- and/or USFWS-approved biologist present during all initial ground disturbing/vegetation clearing activities. Once initial ground disturbing/vegetation clearing activities have been completed, said biologist shall conduct daily pre-activity clearance surveys for endangered/threatened species. Alternatively, and upon approval of the CDFW and/or USFWS, said biologist may conduct site inspections at a minimum of once per week to ensure all prescribed avoidance and minimization measures are fully implemented. 4. No endangered/threatened species shall be captured and relocated without express permission from the CDFW and/or USFWS. 5. If at any time during project construction an endangered/threatened species enters the construction site or otherwise may be impacted by the project, all project activities shall cease. A CDFW/USFWS-approved biologist shall document the occurrence and consult with the CDFW and USFWS, as appropriate, to determine whether it was safe for project activities to resume. 6. For all work occurring in areas where endangered/threatened species may be present and are at risk of entering the project site during construction, the applicant shall install exclusion fencing along the project boundaries prior to start of construction (including staging and mobilization). The placement of the fence shall be at the discretion of the CDFW/USFWS approved biologist. This fence shall consist of solid silt fencing placed at a minimum of three feet above grade and two feet below grade and shall be attached to wooden stakes placed at intervals of not more than five feet. The applicant shall inspect the fence weekly and following rain events and high wind events and shall be maintained in good working condition until all construction activities are complete. 7. All vehicle maintenance/fueling/staging shall occur not less than 100 feet from any riparian habitat or water body, including seasonal wetland features. Suitable containment procedures shall be implemented to prevent spills. A minimum of one spill kit shall be available at each work location near riparian habitat or water bodies. 8. No equipment shall be permitted to enter wetted portions of any affected drainage channel or wetland. 9. At the end of each workday, excavations shall be secured with a cover or a ramp provided to prevent wildlife entrapment. 10. All trenches, pipes, culverts, or similar structures shall be inspected for animals prior to burying, capping, moving, or filling. 11. Considering the potential for the project to impact federally and state-listed species and their habitat, the City shall contact CDFW and USFWS to identify mitigation banks within Santa Barbara County during project development. If the results of the project-specific biological analysis (Mitigation Measure BIO-1[a]) determine that impacts to federally and state threatened or endangered species habitat are expected, City and/or applicant shall explore species-appropriate mitigation bank(s) servicing the region for purchase of mitigation credits. 12. Prior to grading and construction in natural areas of containing suitable upland habitat, a qualified biologist shall conduct a preconstruction survey as determined necessary during the biological analysis (Mitigation MeasureBIO-1[a]). The survey should include a transect survey over the entire project disturbance footprint (including access and staging areas), and mapping of suitable habitat features, such as burrows, that are potentially suitable for listed species. If any listed species are detected, no work shall be conducted until the individual(s) leaves the site of their own accord, unless federal and/or state “take” authorization has been issued for relocation. Typical preconstruction survey procedures, such as burrow scoping and burrow collapse, cannot be conducted without federal and state permits. If any life stage of listed species are found within the survey area, the City and/or applicant shall consult with the USFWS and CDFW to determine the appropriate course of action to comply with the FESA and CESA, if permits are not already in place at the time of construction	compliance monitoring staff to document compliance with the measures.				
BIO-1(g) Worker Environmental Awareness Program. For development facilitated by the plan within undeveloped parcels and prior to construction activities (including staging and mobilization), the City shall require the project proponent to arrange Worker Environmental Awareness Program (WEAP) training for all construction personnel to attend, conducted by a City-approved biologist, to aid workers in recognizing special-status resources that may occur in the construction area. The specifics of this program shall include identification of the sensitive species and habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the work area. A fact sheet conveying this information shall also be prepared for distribution to all contractors, their employers, and other personnel involved with construction. All employees shall sign a form provided by the trainer indicating they have attended the WEAP training and understand the information presented to them. The form shall be submitted to the City to document compliance.	City compliance monitoring staff shall review WEAP information prior to the training and verify the selected biologist is qualified with the appropriate professional qualification standards. The applicant shall provide the attendance log that includes the names and signatures of all personnel that have received the training to City compliance monitoring staff for verification prior to any ground disturbing activities in the project area.	The City shall review training materials, notification, and attendance log and provide confirmation of compliance with the conditions outlined in the measure.	City of Santa Maria			

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
BIO-1(h) Northern California Legless Lizard Avoidance and Minimization. For all development facilitated by the plan in undeveloped areas and if determined necessary based on preliminary review conducted by City staff, a pre-construction clearance survey for Northern California legless lizard shall be conducted by a City-approved qualified biologist within 48 hours prior to the start of construction (including staging and mobilization). The survey shall cover the entire disturbance footprint within suitable habitats with moist loose soil, plus a minimum 100-foot buffer, where permissible, and should identify all special-status wildlife species observed on the project site. During the pre-construction survey the qualified biologist shall inspect under logs, leaf litter, or other suitable refuge. If Northern California legless lizards are identified, individuals shall be relocated by a qualified biologist to suitable cover with loose soils a minimum of 500 feet from the project site, as accessible. A report of the survey results shall be submitted to the City, for review and approval.	A report of the survey results conducted within 48 hours prior to the start of construction shall be submitted to the City, for review and approval.	The City shall review the survey results and provide confirmation of compliance with the conditions outlined in the measure.	City of Santa Maria			
BIO-1(i) Roosting Bat Surveys and Avoidance Prior to Removal. For all development facilitated by the plan that will require the removal of large trees (greater than 20 inches in diameter at five feet from the ground), abandoned buildings, bridges, or other suitable roosting structure identified during a Biological Resources Screening and Assessment prior to tree and/or structure removal, a qualified biologist shall conduct a focused survey of all trees and structures to be removed or impacted by construction activities to determine whether active roosts of special-status bats are present on site. Tree or structure removal shall be planned for either the spring or the fall, and timed to ensure both suitable conditions for the detection of bats and adequate time for tree and/or structure removal to occur during seasonal periods of bat activity exclusive of the breeding season, as described below. Trees and/or structures containing suitable potential bat roost habitat features shall be clearly marked or identified. If no bat roosts are found, the results of the survey will be documented and submitted to the City within 30 days of the survey, after which no further action will be required. If roosts are present, the biologist shall prepare a site-specific roosting bat protection plan to be implemented by the contractor following the City's approval. Additionally, the qualified biologist shall determine compensatory mitigation for temporary or permanent habitat loss due to tree removal, in conjunction with CDFW. The plan shall incorporate the following guidance as appropriate: ▪ When possible, removal of trees/structures identified as suitable roosting habitat shall be conducted during seasonal periods of bat activity, including the following: ▫ Between September 1 and about October 15, or before evening temperatures fall below 45 degrees Fahrenheit and/or more than 0.5inch of rainfall within 24 hours occurs. ▫ Between March 1 and April 15, or after evening temperatures rise above 45 degrees Fahrenheit and/or no more than 0.5 inch of rainfall within 24 hours occurs. ▪ If a tree/structure must be removed during the breeding season and is identified as potentially containing a colonial maternity roost, then a qualified biologist shall conduct acoustic emergence surveys or implement other appropriate methods to further evaluate if the roost is an active maternity roost. Under the biologist's guidance, the contractor shall implement measures similar to or exceeding the following: ▫ If it is determined that the roost is not an active maternity roost, then the roost may be removed in accordance with the other requirements of this measure. ▫ If it is found that an active maternity roost of a colonial roosting species is present, the roost shall not be disturbed during the breeding season(April 15 to August 31). ▪ Tree removal procedures shall be implemented using a two-step tree removal process. This method is conducted over two consecutive days and works by creating noise and vibration by cutting non-habitat branches and limbs from habitat trees using chainsaws only (no excavators or other heavy machinery) on day one. The noise and vibration disturbance, together with the visible alteration of the tree, is very effective in causing bats that emerge nightly to feed to not return to the roost that night. The remainder of the tree is removed on day two. ▪ Prior to the demolition of vacant structures within the project site, a qualified biologist shall conduct a focused habitat assessment of all structures to be demolished. The habitat assessment shall be conducted enough in advance to ensure the commencement of building demolition can be scheduled during seasonal periods of bat activity (see above), if required. If no signs of day roosting activity are observed, no further actions will be required. If bats or signs of day roosting by bats are observed, a qualified biologist will prepare specific recommendations such as partial dismantling to cause bats to abandon the roost, or humane eviction, both to be conducted during seasonal periods of bat activity, if required. ▪ If the qualified biologist determines a roost is used by a large number of bats (large hibernaculum), bat boxes shall be installed near the project site. The number of bat boxes installed will depend on the size of the hibernaculum and shall be determined through consultation with CDFW. If a maternity colony has become established, all construction activities shall be postponed within a 500-foot buffer around the maternity colony until it is determined by a qualified biologist that the young have dispersed. Once it has been determined that the roost is clear of bats, the roost shall be removed immediately.	Results of the survey(s) shall be submitted to the City within 30 days of completion. If necessary, the biologist shall provide a roosting bat protection plan for City review and approval. The qualified biologist shall determine compensatory mitigation, as applicable, in conjunction with CDFW.	The City shall review the survey results and provide confirmation of compliance with the conditions outlined in the measure. The City shall conduct spot checks during construction to ensure compliance with the roosting bat protection plan.	City of Santa Maria; CDFW			

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
BIO-1(j) Monarch Butterfly Avoidance and Minimization. For development facilitated by the plan within undeveloped parcels, prior to construction activities and if determined necessary based on preliminary review conducted by City staff, the City shall require that all construction activities (including equipment staging, grading, and construction) shall be avoided during the monarch butterfly overwintering season between October 15 through March 15, if practicable. In the event construction activities cannot be avoided during the overwintering season, the City shall retain a qualified biologist to conduct a survey for roosting monarch butterflies within seven days prior to initiation of construction activities to determine their presence/absence. If no monarch butterflies are observed during pre-construction surveys, no further actions are necessary. In the event construction pauses for a period of 7 days or more, if construction is planned to restart during the monarch butterfly overwintering season (October 15 through March 15), the City shall retain a qualified biologist to conduct a new survey in accordance with the requirements of this mitigation measure. If construction activities occur during the overwintering season and monarch butterflies are present, the qualified biologist shall establish a protective buffer, ranging from 100 to 300 feet from the roosting site in which monarch butterflies are aggregating. The buffer shall be delineated on site by the biologist with flagging or staking visible by construction personnel. The construction contractor shall ensure no construction occurs within the protective buffer, including staging of equipment or stopping or idling in the buffer, during the overwintering season. In the event construction activities, or other use of equipment, is needed to work within the buffer, the qualified biologist shall be present on site to monitor construction activities and determine if the work is disturbing the aggregated butterflies. If the biologist determines the work is disturbing the butterflies, the biologist shall have the authority to stop work within the protective buffer at any time. In addition, due to the regular movement of the butterflies and locations of the aggregations, the biologist shall have the discretion to adjust the protective buffers, as necessary.	City staff shall conduct a preliminary review of undeveloped parcels prior to the initiation of construction activities. If necessary, the City shall retain a qualified biologist to conduct pre-construction survey(s) within seven days prior to initiation of construction activities. The applicant shall consult with a qualified biologist during construction.	The City shall review the survey(s) prior to project approval and provide confirmation of compliance with the conditions outlined in the measure. City compliance monitoring staff shall spot check in the field throughout grading and construction.	City of Santa Maria			
BIO-1(k) Pre- Construction Bird Surveys, Avoidance, and Notification. For all development facilitated by the plan, prior to construction activities and if determined necessary based on preliminary review conducted by City staff, construction activities initiated during the bird nesting season (February 1 – September 15), involving removal of vegetation (e.g. trees and shrubs), abandoned structures, or other nesting bird habitat, a pre-construction nesting bird survey shall be conducted no more than 5 days prior to initiation of ground disturbance and vegetation removal. The nesting bird pre-construction survey shall be conducted on foot and shall include a buffer around the construction site at a distance determined by a qualified biologist, including staging and storage areas. The minimum survey radius surrounding the work area shall be the following: 250 feet for non-raptors and 1,000 feet for raptors. The survey shall be conducted by a qualified biologist familiar with the identification of avian species known to occur in the Santa Maria region. If construction lapses for seven days or longer, the qualified biologist shall conduct another focused survey before project activities are reinitiated. If nests are found, an avoidance buffer shall be determined by the biologist dependent upon the species, the proposed work activity, and existing disturbances associated with land uses outside of the site. The qualified biologist shall observe the active nest to establish a behavioral baseline of the adults and nestlings, if present. The qualified biologist shall continuously monitor the active nests to detect signs of disturbance and behavioral change as a result of construction impacts, such as noise, vibration, odors, or worker/equipment motion. If signs of disturbance and behavioral changes are observed, the qualified biologist shall cease work causing those changes and may contact CDFW or USFWS for guidance. The buffer shall be demarcated by the biologist with bright orange construction fencing, flagging, construction lathe, or other means to demarcate the boundary. All construction personnel shall be notified of the buffer zone as an “Ecologically Sensitive Area” and to avoid entering the buffer zone during the nesting season. No ground disturbing activities shall occur within the buffer until the biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Encroachment into the buffer shall occur only at the discretion of the qualified biologist on the basis that the encroachment will not be detrimental to an active nest. A report summarizing the pre-construction survey(s) shall be prepared by a qualified biologist and shall be submitted to the City prior to the commencement of construction activities. Project site plans shall include a statement acknowledging compliance with the federal MBTA and California Fish and Game Code that includes avoidance of active bird nests and identification of Best Management Practices to avoid impacts to active nests, including checking for nests prior to construction activities during February 1 to September 15, and what to do if an active nest is found so that the nest is not inadvertently impacted during grading or construction activities.	The applicant shall submit the results of the pre-construction survey(s) prepared by a qualified biologist to the City prior to the commencement of construction activities. The City shall verify that project site plans include a statement acknowledging compliance with the federal MBTA and California Fish and Game Code.	The City shall review the survey(s) prior to project approval and provide confirmation of compliance with the conditions outlined in the measure. City compliance monitoring staff shall spot check in the field throughout grading and construction.	City of Santa Maria			
Cultural and Tribal Cultural Resources						
CUL-1 Historical Built Environment. If determined necessary based on preliminary review conducted by City staff, applicants for new discretionary development projects that propose to significantly alter or demolish any historic-age features (i.e., structures determined to be over 50 years of age based on available City records, such as permitting records) shall be required to submit a historical resources evaluation prepared by a qualified architectural historian or historian who meets the Secretary of the Interior’s Professional Qualifications Standards in architectural history or history (36 CFR Part 61). The report shall address areas containing buildings, structures, objects, sites, landscape/site plans, or other features that are 50 years of age or older and are proposed to be altered or demolished as a part of the proposed project. The evaluation shall include an intensive-level evaluation in accordance with the guidelines and best practices meeting the State Office of Historic Preservation guidelines. All	The applicant shall submit the historical resources evaluation report prepared by a qualified architectural historian to the City for review and concurrence prior to project approval.	The City shall review and approve the historic resources evaluation prior to project approval.	City of Santa Maria			

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
evaluated properties shall be documented on Department of Parks and Recreation Series 523 Forms. The historical resources evaluation report shall be submitted to the City for review and approval. If historical resources are identified through the survey and evaluation, the relocation, rehabilitation, or alteration of the resource shall be completed consistent with the Secretary of the Interior's Standards for the Treatments of Historic Properties (Standards). Applicants shall submit a report to the City that identifies and specifies the treatment of character-defining features and construction activities, and demonstrates how the project complies with the Standards and avoids the substantial adverse change in the significance of the historical resource as defined by CEQA Guidelines Section 15064.5(b). The report shall be prepared by an architectural historian or historical architect meeting the Professional Qualifications Standards as defined by 36 CFR Part 61 and provided to the City for review and concurrence prior to project approval.						
CUL-2(a) Archaeological Resources Assessment. If determined necessary based on preliminary review conducted by City staff, applicants for new discretionary development projects that involve ground disturbance activities (that may include but are not limited to, pavement removal, potholing, grubbing, tree removal, and grading) shall be required to submit to the City an archaeological resources assessment prepared by a qualified archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in either prehistoric or historic archaeology. Assessments shall include a CHRIS records search at the NWIC and a SLF Search from the NAHC. The records searches shall characterize the results of previous cultural resource surveys and disclose any cultural resources that have been recorded and/or evaluated in and around the development site. A qualified archaeologist shall conduct a Phase I pedestrian survey for those projects which include development in archaeologically sensitive areas, as designated by the City, to locate any surface cultural materials. If the Phase I archaeological survey identifies resources that may be affected, the applicant shall also conduct Phase II testing and evaluation. If resources are determined significant or unique through Phase II testing and site avoidance is not possible, the qualified professional shall identify appropriate site-specific mitigation measures in the Phase II evaluation. These measures may include, but would not be limited to, a Phase III data recovery program, avoidance, or other appropriate actions to be determined by a qualified archaeologist. If significant archaeological resources cannot be avoided, impacts may be reduced to less than significant level by filling on top of the sites rather than cutting into the cultural deposits. Alternatively, and/or in addition, a data collection program may be warranted, including mapping the location of artifacts, surface collection of artifacts, or excavation of the cultural deposit, to characterize the nature of the buried portions of sites. Curation of the excavated artifacts or samples would occur as specified by the archaeologist. The City shall review and approve the archaeological resources assessment prior to project approval.	The applicant shall submit the archaeological resources assessment prepared by a qualified archaeologist to the City for review and concurrence prior to project approval.	The City shall review and approve the archaeological resources assessment prior to project approval.	City of Santa Maria			
CUL-2(b) Unanticipated Discoveries. For new development projects where a Phase I archaeological survey identifies archaeological resources that may be affected, project applicants shall be required to retain a qualified cultural resource specialist to monitor construction activities that involve ground disturbing activities within 60 feet of a potentially significant cultural resource. If archaeological resources are encountered during ground-disturbing activities, work in the immediate area shall halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find. If determined to be necessary by the qualified archaeologist, the evaluation may require preparation of a treatment plan and archaeological testing for CRHR eligibility. If the discovery proves to be significant under CEQA and cannot be avoided by the project, additional work, such as excavating the cultural deposit to fully characterize its extent and collecting and curating artifacts, may be determined to be necessary by the qualified archaeologist to mitigate any significant impacts to cultural resources. If archaeological resources of Native American origin are identified during construction, a qualified archaeologist shall consult with the City to begin Native American consultation procedures. Periodic reports of the find and subsequent evaluations shall be submitted to the City during construction.	If necessary, the Applicant shall submit to the City a contract or Letter of Commitment with a qualified archaeologist prior to the issuance of project approval and the issuance of grading and construction permits. The City shall verify the selected archaeologist is qualified with the appropriate professional qualification standards.	City permit compliance staff shall confirm monitoring by the City-approved archaeologist and City grading inspectors shall spot check fieldwork. Periodic reports of the find and subsequent evaluations shall be submitted to the City during construction.	City of Santa Maria			
CUL-2(c) Workers Environmental Awareness Program. For new development projects where a Phase I archaeological survey identifies archaeological resources that may be affected, project applicants shall ensure a City-approved archaeologist provides a cultural resources awareness training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers. The WEAP shall be conducted prior to any project-related ground disturbing activities in the project area. The WEAP would include relevant information regarding sensitive cultural resources, including applicable regulations, protocols for avoidance, and consequences of violating State laws and regulations. The WEAP shall also describe appropriate avoidance and impact minimization measures for cultural resources that could be located at the project site and would outline what to do and who to contact if any potential cultural resources or tribal cultural resources are encountered.	City compliance monitoring staff shall review WEAP information prior to conducting the training. The City shall review and approve the selected archaeologist to ensure qualification with the appropriate professional qualification standards. The applicant shall provide the attendance log that includes the names and signatures of all personnel that have received the training to City compliance monitoring staff for verification prior to any project-related ground disturbing activities in the project area.	The City shall review training materials and attendance log and provide confirmation of compliance with the conditions outlined in the measure.				

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
CUL-4(a) Workers Environmental Awareness Program. For any project with the potential to encounter tribal cultural resources as determined through consultation and/or the preparation of archaeological assessments, the project applicant shall be required to invite a City-approved archaeologist to provide a tribal cultural resources awareness training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers. The City would also invite consulting Tribe(s) to provide a tribal cultural resources awareness training program for all personnel involved in project construction, including field consultants and construction workers. The WEAP training shall be conducted prior to any project-related ground disturbing activities in the project area. The WEAP would include relevant information regarding sensitive cultural resources and tribal cultural resources, including applicable regulations, protocols for avoidance, and consequences of violating State laws and regulations. The WEAP will also describe appropriate avoidance and impact minimization measures for tribal cultural resources that could be located at the project site and would outline what to do and who to contact if any potential cultural resources or tribal cultural resources are encountered. The WEAP would emphasize the requirement for confidentiality and culturally appropriate treatment of any discovery of significance to Native Americans and would discuss appropriate behaviors and responsive actions, consistent with local tribal values.	City compliance monitoring staff shall review WEAP information prior to conducting the training. The City shall invite consulting Tribe(s) to the WEAP training. The applicant shall submit the attendance log that includes the names and signatures of all personnel that have received the training to City compliance monitoring staff for verification prior to any project-related ground disturbing activities in the project area.	The City shall review training materials and attendance log and provide confirmation of compliance with the conditions outlined in the measure.				
CUL-4(b) Tribal Cultural Monitoring. For any project with the potential to encounter tribal cultural resources as determined through consultation and/or the preparation of archaeological assessments, the project applicant shall be required to retain a tribal monitor to monitor construction activities that involve ground-disturbing activities that will occur within 60 feet of a potentially significant cultural resource.	If necessary, the Applicant shall submit to the City a contract or Letter of Commitment with a tribal monitor prior to the issuance of project approval and the initiation of ground-disturbing activities.	City staff shall spot check for compliance during construction.	City of Santa Maria			
Noise						
NOI-1 Conditions of Approval to Reduce Construction Noise. The City of Santa Maria shall review future developments within 500 feet of a sensitive receptor, and where applicable, require construction contractors to implement the following feasible measures as standard conditions of approval. Construction plans submitted to the City shall include construction noise analysis and identify these measures on demolition, grading, and construction plans submitted to the City. The City of Santa Maria Building Division shall verify that grading, demolition, and/or construction plans submitted to the City include these notations prior to issuance of demolition, grading and/or building permits. Project specific environmental documents may adjust recommended noise reduction measures as necessary to respond to site specific conditions. ▪ **Mufflers**. During excavation and grading construction phases, all construction equipment, fixed or mobile, shall be operated with closed engine doors and shall be equipped with properly operating and maintained mufflers consistent with manufacturers' standards. ▪ **Stationary Equipment**. All stationary construction equipment shall be placed so that emitted noise is directed away from the nearest sensitive receptors. ▪ **Equipment Staging Areas.** Equipment staging shall be located in areas that will create the greatest distance feasible between construction-related noise sources and noise-sensitive receptors. ▪ **Smart Back-up Alarms**. Mobile construction equipment shall have smart back-up alarms that automatically adjust the sound level of the alarm in response to ambient noise levels. Alternatively, back-up alarms shall be disabled and replaced with human spotters to ensure safety when mobile construction equipment is moving in the reverse direction in compliance with applicable safety laws and regulations. ▪ **Electrically-Powered Tools and Facilities.** Electrical power shall be used to run air compressors and similar power tools and to power any temporary structures, such as construction trailers or caretaker facilities, where feasible. ▪ **Noise Disturbance Coordinator.** The project applicant shall designate a "noise disturbance coordinator" responsible for responding to any local complaints about construction noise. The disturbance coordinator shall determine the cause of any noise complaint and shall require that reasonable measures be implemented to correct the problem. A telephone number for the disturbance coordinator and the City shall be posted at the construction site. ▪ **Temporary Noise Barriers.** Erect temporary noise barriers, where feasible, when construction noise is predicted to exceed the acceptable standards (e.g., 80 dBA Leq at residential receptors, schools or other sensitive receptors during the daytime) or when the anticipated construction duration is greater than is typical (e.g., two years or greater). Temporary noise barriers shall be constructed with solid materials (e.g., wood) with a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier. If a sound blanket is used, barriers shall be constructed with solid material with a density of at least 1 pound per square foot with no gaps from the ground to the top of the barrier and be lined on the construction side with acoustical blanket, curtain or equivalent absorptive material rated sound transmission class (STC) 32 or higher.	Construction plans shall note construction hours, truck routes, and required noise reduction measures, and shall be submitted to the City for approval prior to grading and construction permit issuance for each project phase. Noise reduction measures shall be identified and described for submittal to the City for review and approval prior to issuance of grading and construction permits. They shall be adhered to for the duration of the project. The applicant shall provide and post signs stating these restrictions at construction site entries. Signs shall be posted prior to commencement of construction and maintained throughout construction. The City of Santa Maria Building Division shall confirm that construction noise reduction measures are incorporated in plans prior to approval of grading and construction permit issuance.	City staff shall ensure compliance throughout all construction phases. Building inspectors and permit compliance staff shall periodically inspect the site for compliance with activity schedules and respond to complaints.	City of Santa Maria			

Mitigation Measure	Plan Requirements and Timing	Monitoring	Responsible Agency or Party	Compliance Verification Initial	Compliance Verification Date	Compliance Verification Comments
NOI-2 Conditions of Approval to Reduce Construction Vibration. The City of Santa Maria shall review future developments within 500 feet of a sensitive receptor, and where applicable, require construction contractors to implement the following feasible buffers for construction equipment as standard conditions of approval. Construction plans submitted to the City shall include construction vibration analysis and identify the following buffer distances during demolition, grading, and construction plans submitted to the City. The City of Santa Maria Building Division shall verify that grading, demolition, and/or construction plans submitted to the City include these notations prior to issuance of demolition, grading and/or building permits. Project specific environmental documents may adjust recommended noise reduction measures as necessary to respond to site specific conditions. To reduce potential construction vibration impacts, the City of Santa Maria shall require the following: ▪ Prior to the issuance of a building permit for a project requiring pile driving during construction, the project applicant shall prepare a groundborne noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to the following construction activities: 1) within 135 feet of fragile structures such as historical resources; 2) within 100 feet of non-engineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); 3) use of a vibratory roller within 40 feet of fragile historical resources or 25 feet of any other structure; or 4) use of a dozer or other large earthmoving equipment within 20 feet for a fragile historical structure or 15 feet of any other structure. The noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed the City's architectural damage thresholds (e.g., 0.12 in/sec PPV for fragile or historical resources, 0.2 in/sec PPV for non-engineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses such as drilling piles as opposed to pile driving, static rollers as opposed to vibratory rollers, and lower horsepower earthmoving equipment shall be used. If necessary, construction vibration monitoring shall be conducted to ensure the FTA's vibration thresholds are not exceeded.	Construction plans shall note construction hours, truck routes, and required vibration reduction measures, and shall be submitted to the City for approval prior to grading and construction permit issuance for each project phase. If necessary, based on the findings of the groundborne noise and vibration analysis, vibration reduction measures shall be identified and described for submittal to the City for review and approval prior to issuance of grading and construction permits. They shall be adhered to for the duration of the project. The City of Santa Maria Building Division shall confirm that construction vibration reduction measures are incorporated in plans prior to project approval and issuance of grading and construction permits.	City staff shall ensure compliance throughout all construction phases. Building inspectors and permit compliance staff shall periodically inspect the site for compliance with applicable mitigation. If necessary, construction vibration monitoring shall be conducted.	City of Santa Maria			

ATTACHMENT G

CEQA FINDINGS
CITY OF SANTA MARIA 2045 GENERAL PLAN UPDATE

A. Findings that with regard to certain project and cumulative effects, changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment.

The following topics were discussed in detail within the Environmental Impact Report (EIR) for the 2045 Santa Maria General Plan Update (SCH # 2025020584) and were determined to result in less than significant impacts after implementation of the mitigation measures identified in the EIR.

1. AIR QUALITY (AQ) AND GREENHOUSE GAS (GHG) EMISSIONS

a. **Impact AQGHG-3.** Construction activities for projects lasting longer than two months or located within 1,000 feet of sensitive receptors could expose sensitive receptors to substantial pollutant concentrations. However, with implementation of Mitigation Measure AQGHG-3, This impact would be less than significant. This measure requires that for individual discretionary and ministerial residential projects facilitated by the 2045 General Plan Update that would develop three or more units; would involve demolition, mass grading, or excavation and trenching phases longer than two months; and would be located within 1,000 feet of existing sensitive receptors, the City shall enforce a project specific Condition of Approval requiring off-road heavy-duty diesel engines to meet CARB-certified Tier 3 or higher emission standards or employ CARB-certified Level 3 diesel particulate filters to the extent that this equipment is commercially available. “Commercially available” shall be defined as the availability of required equipment in geographic proximity to the project site and within a reasonable timeframe relative to critical path construction timing. If Tier 3 or higher emission standard equipment or Level 3 diesel particulate filters are not commercially available, documentation shall be provided by the project applicant to the City stating that Tier 3 equipment or higher emission standard or Level 3 diesel particulate filters are not commercially available with supporting evidence from the contractor. If CARB-certified Level 3 diesel particulate filters are utilized, they shall be kept in working order and maintained in operable condition according to manufacturer’s specifications, as applicable. Therefore, this impact will be Class II, less than significant with incorporation of mitigation.

2. BIOLOGICAL RESOURCES (BIO)

a. **Impact BIO-1**. Development facilitated by the 2045 General Plan Update could have a substantial adverse effect on special-status species, either directly or as a result of habitat modification. Implementation of federal, State, and local regulations and policies, as well as Mitigation Measures BIO-1(a) through BIO-1(k) would ensure that impacts from development facilitated by the 2045 General Plan Update on candidate, sensitive, or special-status species would be less than significant. Therefore, this impact will be Class II, less than significant with incorporation of mitigation.

b. **Impact BIO-2.** Wetlands within the Plan Area may be affected by Development facilitated by the 2045 General Plan Update. Development projects would be subject to adopted City regulations to minimize impacts to riparian habitat, sensitive natural communities, and wetlands. Compliance with the NPDES Construction General Permit, Santa Maria Municipal Code, proposed policies in the 2045 General Plan Update, and Mitigation Measures BIO-1(a) and BIO-1(d) would ensure potential impacts to riparian habitat, sensitive natural communities, and wetlands would be less than significant with mitigation.

3. CULTURAL AND TRIBAL CULTURAL RESOURCES (CUL)

a. **Impact CUL-1**. Development facilitated by the 2045 General Plan has the potential to adversely affect previously unidentified historic-period resources. Implementation of applicable 2045 General Plan policies, State and federal regulations, and the Santa Maria Municipal Code would minimize adverse impacts on historical resources. Additionally, Mitigation Measure CUL-1 requiring the submittal of a historical resources evaluation if determined necessary based on a preliminary review conducted by city staff for any structures that are 45 years of age or older and are proposed to be altered or demolished would reduce impacts to less than significant. If historical resources are identified through the survey and evaluation, the relocation, rehabilitation, or alteration of the resource shall be completed consistent with the Secretary of the Interior's Standards for the Treatments of Historic Properties (Standards). Therefore, this impact will be Class II, less than significant with incorporation of mitigation.

b. **Impact CUL-2**. Development facilitated by the 2045 General Plan Update has the potential to disturb or damage archaeological resources. Implementation of applicable 2045 General Plan policies, State and federal regulations, and the Santa Maria Municipal Code would minimize adverse impacts to archaeological resources. Additionally, implementation of mitigation measures CUL-2(a), CUL-2(b), and CUL-2(c) requiring archeological resources assessments prepared by a qualified archaeologist who meets the Secretary of the Interior's Professional Qualification Standards in either prehistoric or historic archaeology, retaining a qualified cultural resource specialist to monitor construction activities that involve ground-disturbing activities within 60 feet of a potentially significant cultural resource identified through a Phase I archaeological survey, and the completion by a City-approved archaeologist of a cultural resources awareness training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers for projects where a Phase I archaeological survey identifies archaeological resources that may be affected would reduce impacts to less than significant.

c. **Impact CUL-4**. Development facilitated by the 2045 General Plan Update has the potential to disturb or damage tribal cultural resources. Implementation of applicable 2045 General Plan policies, State and federal regulations, and the Santa Maria Municipal Code would minimize adverse impacts to tribal cultural resources. Mitigation Measure CUL-4(a), requires that for any project with the potential to encounter tribal cultural resources as determined through consultation

and/or the preparation of archaeological assessments, the project applicant shall be required to invite a City-approved archaeologist to provide a tribal cultural resources awareness training program (Worker Environmental Awareness Program [WEAP]) for all personnel involved in project construction, including field consultants and construction workers. The City would also invite consulting Tribe(s) to provide a tribal cultural resources awareness training program for all personnel involved in project construction, including field consultants and construction workers. The WEAP training shall be conducted prior to any project-related ground disturbing activities in the project area. Mitigation Measure CUL-4(b) requires that for any project with the potential to encounter tribal cultural resources as determined through consultation and/or the preparation of archaeological assessments, the project applicant shall be required to retain a tribal monitor to monitor construction activities that involve ground-disturbing activities that will occur within 60 feet of a potentially significant cultural resource. Therefore, this impact will be Class II, less than significant with incorporation of mitigation.

4. NOISE (NOI)

a. **Impact NOI-2.** Construction activity from buildout of the 2045 General Plan Update would generate groundborne vibration, potentially affecting nearby land uses. Implementation of required mitigation measure NOI-2 requiring the City of Santa Maria to review future developments within 500 feet of a sensitive receptor, and where applicable, require construction contractors to implement feasible buffers for construction equipment as standard conditions of approval, as well as policies and actions in the plan, would ensure vibration levels would not exceed applicable thresholds for building damage. Therefore, this impact would be Class II, less than significant with incorporation of mitigation.

B. Findings that with regard to certain project and cumulative effects, those changes or alterations which mitigate those effects, are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.

No impacts were identified in the EIR for which mitigation measures were the responsibility and jurisdiction of another public agency.

C. Findings that with regard to certain project and cumulative effects, specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

The EIR identified significant, unavoidable adverse project-specific or cumulative related environmental impacts associated with the proposed project that cannot be mitigated to less than significant levels by the adoption of mitigation measures in the topic areas of Agricultural Resources, Air Quality and Greenhouse Gas Emissions, Noise, and Transportation and Traffic.

The City Council finds that these impacts will be mitigated to the maximum extent

feasible, but will still remain significant and unavoidable, consistent with the following findings.

1. AGRICULTURAL RESOURCES (AG)

a. **Impact AG-1.** Land use changes in the annexation area have the potential to conflict with existing zoning for agriculture. There are no feasible mitigation measures that would avoid or fully mitigate for the conversion of Farmland or agriculturally zoned lands. As a result, this would be a significant and unavoidable impact. No feasible mitigation is available to reduce this impact to less than significant.

2. AIR QUALITY (AQ) AND GREENHOUSE GAS EMISSIONS

a. **Impact AQGHG-1**. The 2045 General Plan Update would result in new emissions that may exceed the 2022 Ozone Plan's direct and indirect emissions inventory for the County. As a result, the plan would conflict with or obstruct implementation of the 2022 Ozone Plan. No feasible mitigation is available that would reduce this impact to less than significant. This impact would be significant and unavoidable.

b. **Impact AQGHG-2**. The 2045 General Plan Update could result in a cumulatively considerable net increase of all criteria pollutants for which the plan region is in non-attainment under an applicable federal or State ambient air quality standard. Even with implementation of Mitigation Measure AQGHG-2, impacts would be significant and unavoidable. The measures identified in Mitigation Measure AQGHG-2 will be implemented, including requiring applicants for future discretionary development projects facilitated by the 2045 General Plan Update to prepare a project-specific air quality analysis in accordance with SBCAPCD Environmental Review Guidelines. The analysis shall quantify construction and operational emissions and compare estimated emissions to the SBCAPCD's adopted thresholds of significance for criteria air pollutants. If the analysis determines that emissions would exceed any of the applicable thresholds, the project applicant shall implement all feasible mitigation measures to reduce emissions to below the thresholds. All mitigation measures shall be documented and verified by the lead agency prior to project approval or issuance of grading/building permits. As mentioned above, impacts from the 2045 General Plan Update would result in cumulatively considerable net increase in criteria pollutants. Impacts would remain significant and unavoidable after implementation of Mitigation Measure AQGHG-2.

c. **Impact AQGHG-5**. Development facilitated by the 2045 General Plan Update would generate GHG emissions that may have a significant impact on the environment and conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases. No feasible mitigation is available that would reduce this impact to less than significant. This impact would be significant and unavoidable.

3. NOISE

a. Impact NOI-1. Development facilitated by the 2045 General Plan Update would result in construction noise that may impact nearby noise-sensitive land uses. The plan would introduce new noise sources and contribute to an increase in long-term operational noise levels within the city limit as well as the annexation area. Implementation of required noise-reduction mitigation, as well as policies and actions in the plan, would minimize disturbance to noise-sensitive land uses. Implementation of Mitigation Measure NOI-1 requiring the City of Santa Maria to review future developments within 500 feet of a sensitive receptor, and where applicable, requiring construction contractors to implement feasible noise reduction measures as standard conditions of approval would reduce these impacts but would not avoid or fully mitigate for the increase in construction and traffic noise in the plan area. As a result, impacts would remain significant and unavoidable after implementation of Mitigation Measure NOI-1.

4. TRANSPORTATION AND TRAFFIC

a. **Impact TRA-2**. The future (2045) citywide rates of VMT with the 2045 General Plan Update would not meet the 17% VMT reduction target required to be consistent with CEQA Guidelines 15064.3(b). There are no feasible General Plan policies or mitigation measures that could reduce citywide rates of VMT below the VMT reduction target. No feasible mitigation is available that would reduce this impact to less than significant. As a result, this would be a significant and unavoidable impact.

D. Findings that with regard to certain project effects, those effects found to be less than significant and no mitigation measures are required.

The EIR identified the following potential impacts to be less than significant or no impact.

1. AGRICULTURAL RESOURCES

a. **Impact AG-2**. The 2045 General Plan Update would not conflict with existing zoning for forest land, timberland, or timberland production, nor result in the loss of forest land or convert forest land to non-forest uses. There would be no impact.

2. AIR QUALITY AND GREENHOUSE GAS EMISSIONS (GHG)

a. **Impact AQGHG-4**. Future development facilitated by the 2045 General Plan Update would not create objectionable odors that could affect a substantial number of people or expose future residents to odors that would produce a public nuisance or hazard. This impact would be less than significant.

3. BIOLOGICAL RESOURCES (BIO)

a. **Impact BIO-3.** Due to the existing level of development, there are no essential wildlife connectivity areas within the plan area. With adherence to the proposed policies of the 2045 General Plan Update and compliance with the Santa Maria Municipal Code, implementation of the 2045 General Plan Update would have a less than significant impact on the movement of native resident or migratory fish or wildlife species within the plan area, or on established native resident or

migratory wildlife corridors.

b. **Impact BIO-4**. Development facilitated by the 2045 General Plan Update would be required to adhere to the proposed policies of the 2045 General Plan Update and Santa Maria Municipal Code requirements related to protection of trees and biological resources. Therefore, this impact would be less than significant.

c. **Impact BIO-5**. Implementation of the 2045 General Plan Update would not conflict with the provision of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. No impact would occur.

4. CULTURAL (CUL) AND TRIBAL CULTURAL RESOURCES

a. **Impact CUL-3**. Ground disturbing activities associated with development facilitated by the 2045 General Plan Update could result in disturbance of human remains. Compliance with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.8 would ensure this potential impact would be less than significant.

5. HYDROLOGY AND WATER QUALITY

a. **Impact HYD-1**. Development facilitated by the 2045 General Plan Update would result in construction and operational activities which may contribute to soil erosion and degraded water quality. Development facilitated by the plan would be required to adhere to existing NPDES permits and Municipal Code requirements which would minimize the potential for development to degrade water quality. This impact would be less than significant.

b. **Impact HYD-2**. Development facilitated by the 2045 General Plan Update would increase the amount of impervious surface area and increase groundwater demand in Santa Maria. Compliance with the Central Coast RWQCB, Municipal Code, and 2045 General Plan Update policies would ensure the proposed Plan would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge. This impact would be less than significant.

c. **Impact HYD-3**. Development facilitated by the 2045 General Plan Update would potentially alter the existing drainage pattern on individual project sites throughout the city. Development facilitated by the 2045 General Plan Update would be required to adhere to existing NPDES Permit and Municipal Code requirements which would ensure development would not substantially alter existing drainage patterns. This impact would be less than significant.

d. **Impact HYD-4**. Development facilitated by the 2045 General Plan Update may occur in flood hazard areas. Compliance with applicable municipal code requirements and proposed Safety Element policies would ensure development within areas subject to inundation would be sited, designed, and constructed as to not exacerbate risks from release of pollutants from inundation. This impact would be less than significant.

e. **Impact HYD-5**. There is no sustainable groundwater management plans for the

Santa Maria Valley Groundwater Basin; however, development facilitated by the 2045 General Plan Update would be subject to the Basin Plan. Future development facilitated by the plan would not conflict with the Basin Plan as it would be required to adhere to federal, State, and local regulations to minimize water quality impacts in compliance with the Basin Plan. This impact would be less than significant.

6. NOISE (NOI)

a. **Impact NOI-3**. Buildout of the 2045 General Plan Update could expose people residing or working in the plan area to excessive noise levels from airport noise. Implementation of policies and actions in the plan would ensure this impact would be less than significant.

7. TRANSPORTATION AND TRAFFIC

a. **Impact TRA-1**. The 2045 General Plan Update would not conflict with the Connected 2050 RTP/SCS, the Sant Maria Active Transportation Plan, or any other applicable program, plan, ordinance, or policy relevant to the transportation system. This impact would be less than significant.

b. **Impact TRA-3**. Development facilitated by the 2045 General Plan Update would comply with State, Santa Maria Fire Department, and City requirements related to transportation design safety and emergency access. With adherence to these requirements, the 2045 General Plan Update would not substantially increase hazards due to a geometric design feature or result in inadequate emergency access, and this impact would be less than significant.

8. UTILITIES AND SERVICE SYSTEMS

a. **Impact UTIL-1**. Development facilitated by the 2045 General Plan Update would increase demand for additional utility infrastructure which may require relocation or construction of utility facilities or services to serve plan buildout beyond existing conditions, specifically within the annexation area. However, development facilitated by the 2045 General Plan Update would be constructed consistent with applicable City code, buildings standards, and engineering standards. Therefore, these impacts would be less than significant.

b. **Impact UTIL-2**. The overall growth anticipated by the 2045 General Plan Update would generate additional water demand in Santa Maria that could exceed projected water supplies during some Multiple Dry-Years. With the implementation of existing policies and programs, this impact would be less than significant.

c. **Impact UTIL-3**. The 2045 General Plan Update would not generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure. New development facilitated by the plan would be required to comply with applicable solid waste reduction statutes and regulations. This impact would be less than significant.

E. CEQA findings of Infeasibility of Alternatives pursuant to PRC Section 21081 and CCR Section 15091

As a Programmatic analysis of a citywide general plan update for a twenty-year planning period, the EIR provides a comparative impact analysis for a range of growth scenarios and policy options under community consideration and concludes that some of the alternatives could potentially lessen some environmental impacts. The City Council finds that specific economic, legal, social, technological and other considerations make the alternatives identified in the EIR infeasible, based on the EIR analysis, public comment, and Council deliberations as follows:

1. No Project Alternative. Under the No Project Alternative, the City of Santa Maria would not adopt the 2045 General Plan Update. Instead, development would continue in accordance with the existing General Plan. This alternative assumes that current land use designations, policies, and growth projections would remain in effect, guiding future development and infrastructure decisions. For the purpose of this analysis, the No Project Alternative is assumed to result in reduced overall buildout potential compared to the 2045 General Plan Update, as it reflects continuation of existing land use designations and policies without the proposed changes that would facilitate additional growth. As discussed in detail in Section 6.2.2 of the EIR, this alternative would avoid the potential environmental impacts associated with the increased development intensity and expanded planning strategies in the plan.

   While some development would still occur under existing entitlements and zoning regulations, the City would not implement the new land use strategies, environmental protections, or housing and mobility policies in the plan. As a result, the No Project Alternative would not fulfill the objectives of the 2045 General Plan Update because it would not fully address evolving community needs, state housing requirements (future RHNA cycles), or infrastructure demands anticipated through 2045. Therefore, the city rejects this Alternative. The findings for the proposed plan set forth in this document and the overriding social, economic and other considerations set forth in the Statement of Overriding Considerations provide support for the proposed project and the elimination of this alternative from future consideration.

2. Infill Only Alternative. Under the Infill Only Alternative, the City of Santa Maria would adopt the 2045 General Plan Update, including all goals and policies. However, the Infill Only Alternative would exclude the annexation of areas located east of the current City limits and direct development to areas within existing urban or suburban areas such as infill, redevelopment, or increased densities. For the purpose of this analysis, the Infill Only Alternative is assumed to result in a similar overall level of buildout and population growth compared to the 2045 General Plan Update, despite the exclusion of future development in the Eastern Annexation area. As discussed in detail in Section 6.3.2 of the EIR, this alternative would avoid environmental impacts in the annexation area, such as conversion of agricultural land, fragmentation of

open space, or potential effects on biological resources, while potentially exacerbating environmental impacts associated with the increased development density in existing neighborhoods.

While this alternative would reduce the geographic footprint of development, it would result in increased development pressure on existing neighborhoods and infrastructure. As a result, the Infill Only Alternative would not fulfill the primary objectives of the 2045 General Plan Update because it would not fully address evolving community health needs, state housing requirements, or opportunities for connected growth anticipated through 2045. The City therefore rejects this Alternative. The findings for the proposed plan set forth in this document and the overriding social, economic and other considerations set forth in the Statement of Overriding Considerations provide support for the proposed project and the elimination of this alternative from future consideration.

3. Greater Annexation Alternative. Under the Greater Annexation Alternative, the City of Santa Maria would adopt the 2045 General Plan Update, including all goals, policies, and land use changes. However, the Greater Annexation Alternative would include a larger annexation area east of the current City limits. This alternative assumes a similar level of development density would occur in the larger annexation area, resulting in increased total development and an increased population compared to the 2045 General Plan Update. For the purpose of this analysis, the Greater Annexation Alternative is assumed to result in increased overall buildout potential and population growth compared to the 2045 General Plan Update, due to the inclusion of a larger annexation area and expanded Sphere of Influence.

   The expanded geographic footprint of the Greater Annexation Alternative would fulfill many of the primary objectives of the 2045 General Plan Update because it would have the capacity to meet state housing requirements and address some community needs; however, the distributed development that may occur under this alternative would not fully address evolving community health needs or opportunities for connected growth anticipated through 2045. As discussed in detail in Section 6.4.2, of the EIR, this alternative would result in greater environmental impacts across many resource areas as the increased footprint would reduce available agricultural land and increase VMT and associated criteria pollutant and GHG emissions. Therefore, the city rejects this Alternative. The findings for the proposed plan set forth in this document and the overriding social, economic and other considerations set forth in the Statement of Overriding Considerations provide support for the proposed project and the elimination of this alternative from future consideration.

ATTACHMENT H

SANTA MARIA 2045 GENERAL PLAN UPDATE

Statement of Overriding Considerations

CEQA requires the decision-making agency to balance the benefits of a project against its significant unavoidable impacts when determining whether to approve a project. If the benefits of the project outweigh its unavoidable adverse environmental effects, those effects may be considered acceptable (CEQA Guidelines Section 15093(a)). CEQA requires the agency to state in writing the specific reasons for considering a project acceptable when significant impacts are not avoided or substantially lessened. Those reasons must be based on substantial evidence in the Final EIR or elsewhere in the administrative record (CEQA Guidelines Section 15093(b)).

Having reduced the adverse significant environmental effects of the Santa Maria 2045 General Plan ("Project") to the extent feasible by adopting mitigation measures, and having considered the entire administrative record on the project, the City Council has weighed the benefits of the Project against its unavoidable adverse impacts after mitigation in regard to Agricultural Resources, Air Quality and Greenhouse Gas Emissions, Noise, and Transportation and Traffic. While recognizing that the unavoidable adverse impacts are significant under CEQA thresholds, the City Council nonetheless finds that the unavoidable adverse impacts that will result from the Project are acceptable and outweighed by specific social, economic and other benefits of the Project.

The City Council of the City of Santa Maria adopts and makes this Statement of Overriding Considerations regarding the significant unavoidable impacts of the Project and the anticipated benefits of the Project as required by Section 21081(b) of the California Environmental Quality Act. The City Council finds that each of the benefits set forth below in this Statement constitutes a separate and independent ground for finding that the benefits of the Project outweigh the risks of their potential significant adverse environmental impacts. The benefits of the Project, which constitute the specific economic, legal, social, technological and other considerations that justify the approval of the Project are as follows:

1. The Project considers and plans for future growth in the City of Santa Maria through the year 2045 based on the City's historic growth patterns, current and potential land available for development, and current and future economic and social conditions in Santa Maria. The growth projections were informed by job and population projections from the Santa Barbara County Association of Governments (SBCAG) and three cycles of potential Regional Housing Needs Allocation (RHNA).

2. The Project plans for future growth within existing City boundaries and future planned annexation areas while balancing the need for adequate infrastructure, housing, and economic vitality with the needs for resource management,

environmental protection, and preservation of quality of life for Santa Maria residents.

3. The Project provides a Land Use Policy Map that accounts for existing development, physical constraints, future growth areas including proposed annexation areas, economic development, hazards, and incompatible uses, and assigns densities and use types accordingly to enhance the safety, livability, and economic vitality of Santa Maria.

4. The Project implements principles of sustainable growth by concentrating intensification of existing urban uses primarily along key commercial and transportation corridors (ex. Main Street and Broadway), thereby providing opportunities for a diverse mix of uses while maintaining the City's existing single family residential neighborhoods.

5. The Project enhances the local economy and provides opportunities for future jobs and business development commensurate with forecasted growth by planning for a mix of residential and commercial development near existing urbanized areas and transportation corridors.

6. The Project improves mobility options through the development of a multi-modal transportation network that enhances connectivity, supports community development patterns, limits traffic congestion, promotes public and alternative transportation methods, and supports the goals of adopted regional transportation plans.

7. The Project is the product of a comprehensive planning effort driven by members of the general public, members of the Technical Advisory Committee, city stakeholders, the Planning Commission and the City Council through numerous surveys, public meetings, hearings, and workshops that resulted in a thoughtful balance of community, economic, social, and environmental interests.

CITY OF SANTA MARIA

PLANNING COMMISSION STAFF REPORT

MARCH 4, 2026

5.a

Attachment J. Planning Commission Staff Report 3-4-26.docx

Property Location: Citywide

The City of Santa Maria Planning Commission will review and consider for recommendation to City Council, certification of the Final Environmental Impact Report, adoption of the Santa Maria 2045 General Plan including initiation of proceedings to amend the City's Sphere of Influence and annex the territory designated "Planned Annexation", and approval of a Zoning Map Amendment repealing and reenacting the City of Santa Maria Official Zoning Map for consistency with the General Plan.

Environmental: Environmental review for this project was completed through the preparation of an Environmental Impact Report (SCH# 2025020584) pursuant to the California Environmental Quality Act (CEQA) and State Guidelines.

Planner Contact: Dana Eady, 805-925-0951 ext. 2444; deady@cityofsantamaria.org

RECOMMENDATION:

Take the following actions:

1. By resolution, recommend that the City Council adopt a resolution certifying the Final Environmental Impact Report prepared for the Santa Maria 2045 General Plan Update; and

2. By resolution, recommend that the City Council adopt a resolution adopting the City of Santa Maria 2045 General Plan, replacing the existing adopted General Plan; and

3. By resolution, recommend that the City Council adopt an ordinance approving a Zoning Map Amendment (Z2026-0001) repealing and reenacting the City of Santa Maria Official Zoning Map.

DISCUSSION

The City of Santa Maria's General Plan is a comprehensive document that establishes the community's vision and provides a framework that will guide decisions on topics such as growth, economic development, and land use through the planning horizon year of 2045. The plan includes goals, policies, and implementation actions in chapters called Elements. The Santa Maria 2045 General Plan supersedes and replaces the City's

current General Plan and has been substantially updated to address local conditions, community priorities and goals, and State law.

This item was reviewed by the Planning Commission at the February 18, 2026, public hearing where it was continued to March 4, 2026, with direction to staff to respond to the items raised in the following public comment letters:

1. Grower Shipper Association, dated February 18, 2026
2. Urban Planning Concepts, Inc., dated February 13, 2026
3. Urban Planning Concepts, Inc., dated February 16, 2026
4. Urban Planning Concepts, Inc., PowerPoint comments, February 18, 2026
5. Dignity Health Marian Regional Medical Center, dated February 17, 2026

The following table includes a summary of the comments provided in each letter, a staff response, and any recommended changes to be incorporated into the Final General Plan.

Letter 1: Grower Shipper Association, dated February 16, 2026	
Comment Summary	Staff Response
<u>*Circulation Element*</u> 1. *Page 10-Roundabouts. "It is important for the City to collaborate with local communities to be engaged and involved in the design and implementation of local roundabouts <u>where appropriate."</u> We have commented extensively that roundabouts are not always the appropriate solution for areas frequented by agricultural vehicles and equipment.*	Revise as follows: "It is important for the City to collaborate with local communities and to be engaged and involved in the design and implementation of local roundabouts <u>to ensure that they are sited and designed appropriately.</u>
2. *~~"Action CIR-4.2.2: Maintain a truck route plan identifying streets to be posted as designated truck routes to avoid sensitive uses, and to be posted with weight limit restrictions and accompanied with street design elements where possible to discourage their use by heavy vehicles."~~ Appropriate and efficient agricultural transportation corridors must remain open to avoid irreparable harm to highly perishable fresh produce. Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	Action CIR-4.2-2 is required per Assembly Bill (AB) 98, requiring the City to update its Circulation Element by January 1, 2028, identifying and establishing specific travel routes for the transport of goods, materials, or freight for storage, transfer, or redistribution to safely accommodate additional truck traffic and avoid residential areas and concentrations of sensitive noise receptors.

3. *"Policy CIR-7.1: Reduce VMT. Reduce VMT ~~below regional averages~~ on a "per resident" and "per employee" basis <u>where required</u>…" We are concerned that going above and beyond already-stringent State requirements could reduce job and economic opportunities for residents and businesses. As a regulatory requirement, it should instead conform with State mandates without creating additional undue burdens. Additional incentives could be considered but should not be a mandatory reduction.*	In accordance with SB 743 and CEQA Guidelines Section 15064.7(c), Thresholds of Significance, the City of Santa Maria has elected to adopt the VMT reduction target set by CARB for the SBCAG region as the threshold of significance for VMT impact determination. Using this threshold, VMT impacts would be considered potentially significant if the forecasted rate of residential VMT per household or VMT per employee for the project were to exceed 83 percent of the existing rate of VMT in each category (i.e., at least a 17 percent reduction in per-unit VMT would be required for an impact to be considered less than significant). Recommend the following changes to Policy CIR-7.1: Reduce VMT. Reduce VMT <u>in accordance with the reduction target set by the California Air Resources Board (CARB) for the Santa Barbara County Association of Governments (SBCAG) region</u> ~~below regional averages~~ on a "per resident" and "per employee" basis.
<u>*Conservation and Open Space Element*</u> 1. *"Action COS-1.3.1: …• Reduce mowing in targeted areas (i.e., within ~~agricultural and~~ habitat buffers and in City open spaces) to promote natural plant growth and habitat for pollinators." This change is needed to protect agricultural resources from damaging pests and diseases that can be harbored in unmanaged lands.*	Recommend changes to Action COS1.3.1 as proposed.
2. *"Policy COS-2.1: Agricultural preservation. Collaborate with Santa Barbara County and local landowners to preserve existing agricultural uses on lands not proposed for future development, including croplands and rangelands. Action COS-2.1.1: During review of projects that would alter or convert existing agricultural uses, balance state and regional efforts to preserve existing agricultural uses, including the Santa Barbara County Right to Farm Ordinance, clustering of urban land uses/development, and transfer of development rights —with*	Policy COS-2.1 and Action COS-2.1.1 both include direction regarding the potential future development of areas that are adjacent to agricultural uses. These would apply to the future Planned Annexation area (PA) as well as areas within City limits that are adjacent to agricultural uses and are planned for future development. No changes to these policies are recommended as additional planning would be required to implement the policy and action to ensure that future development takes into account the location of agricultural uses and provides sufficient buffers.

other factors. These include providing adequate housing, achieving a jobs-housing balance, supporting economic sustainability, and advancing other City interests." Inducing or placing incompatible uses, such as sensitives sites, residential uses, and DACs into and near agricultural production and support areas will result in predictable land use conflicts and cascading impacts to both agricultural operations and residents. Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.	
3. *"Action COS-2.1.2: To the extent feasible, support the establishment of agricultural conservation easements on land within the City's Sphere of Influence that is zoned for agriculture and designated as Prime Farmland, Farmland of Statewide Importance, and Unique Farmland by initiating discussions with property owners on eligible sites and providing education and technical assistance to interested owners." A compact urban footprint and prudent land use planning would be most beneficial to agricultural resources, conservation, and open space, rather than conservation easements or technical assistance from the City for agricultural lands within the City's Sphere of Influence.*	Recommend deleting Action COS-2.1.2. Area within the City's limits and SOI is not zoned for agriculture and there are no proposed changes to land use designations or zoning to add agricultural zoning designations to property within the City's limits or in the SOI.
4. *~~"Policy COS-2.2: Sustainable agriculture. Encourage the adoption of sustainable agricultural practices to preserve productivity while protecting natural environments."~~ While we also support various forms of sustainable agriculture, this Policy is beyond the scope of the City, overly prescriptive, and outside of its area of expertise.*	While Policy COS-2.2 is broad in scope, the intent is to provide direction for the City to generally support sustainable agricultural practices. No changes to this policy are recommended.
5. *"Action COS-2.2.1: Support local agricultural operators to encourage the continued use and adoption of best management practices that enhance soil*	Recommend making the changes to Action COS-2.2.1 as recommended in item #5.

quality, protect plant health, conserve water, and reduce soil erosion~~, including: • Integrated pest management and reduction of chemical pesticide use • Rotational grazing and crop rotation to enhance soil health and biodiversity • Agroforestry • Composting~~" While we also support the advancement of best management practices, these comments are overly prescriptive, not reasonably feasible for the City to support, not applicable to agriculture in Santa Maria, and/or would compromise the food safety and marketability of the fresh produce grown in and near the City.	
6. *~~"Policy COS-5.2: Agricultural air pollutant emissions. Reduce air pollutant emissions associated with agricultural uses. Action COS-5.2.1: Work with agricultural operators located within City limits and in adjacent unincorporated areas to encourage the adoption of farming practices that minimize dust, consistent with the Santa Barbara County's dust control measures. These practices include limiting plowing, disking, mowing, and tilling when soil is dry and winds are high, and using surface coverings or cover crops to reduce wind erosion and stabilize soil. Action COS-5.2.2: Coordinate with SBCAPCD to report illegal burnings and enforce SBCAPCD regulations pertaining to agricultural burnings. Action COS-5.2.3: Collaborate with SBCAPCD to monitor pesticide residues in the air and enforce pesticide use and storage regulations.~~ These Policies and Actions are overly prescriptive, already regulated by various agencies, and beyond the City's jurisdiction. Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	Recommend deleting Action COS-5.2.3 as these activities are monitored by Santa Barbara County. No other changes are recommended to be made as this policy and action address agricultural operations that could impact properties within City limits and within the Planned Annexation (PA) area should it be annexed and developed in the future.

7. *"Action COS-5.2.4: Update the Municipal Code to establish a minimum buffer requirement between agricultural uses, including agricultural supply businesses, and development based on the type of use. Sensitive land uses, including residential uses, schools, day cares, senior homes, and hospitals, shall require the largest buffer distance from agricultural and related uses." Buffers must be placed on the new use, rather than the existing agricultural use, and are not a substitute for good land use planning. Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	The buffer ordinance would be developed through a public review process, and the focus would be placed on the new use and how far that use could be located to agricultural uses. Recommend the following changes to Action COS-5.2.4: Update the Municipal Code to establish a minimum buffer requirement between <u>existing</u> agricultural uses, including agricultural supply businesses, and <u>new</u> development based on the type of use. Sensitive land uses, including residential uses, schools, day cares, senior homes, and hospitals, require the largest buffer distance from agricultural and related uses.
8. *"Action COS-5.2.5: Update the Municipal Code to require the use of green walls or vegetation barriers in combination with minimum buffers to provide a physical barrier between agricultural and sensitive uses." Industrial and commercial uses would be the most beneficial buffers. We are concerned about ongoing maintenance of the vegetative areas, and the potential for these spaces near agricultural areas to be reservoirs for agricultural pests, diseases, and food safety threats, which would be detrimental to agricultural uses.*	Recommend deleting Action COS-5.2.5. The buffers are addressed in Action COS-5.2.4.
<u>*Economic Development Element*</u> 1. *"Policy ECON-2.8: Annexation lands. Support efforts for the annexation of land into the city to promote business expansion and residential growth. Leverage annexation as a tool to accommodate economic development, enhance infrastructure, and create opportunities for sustainable urban growth." Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	No changes to Policy ECON-2.8 are recommended. The 2045 General Plan includes an area that is designated as Planned Annexation (PA). This policy would directly apply to the future development of this area should it be annexed by LAFCO.

Health and Environmental Justice Element 1. *Page 3. "(DACs) are areas identified by the California Environmental Protection Agency or low-income areas that ~~are~~ may be disproportionately affected by environmental pollution and other hazards that can lead to negative health effects, exposure, or environmental degradation." Page 5. "Below are summaries of environmental health factors that may affect DACs in Santa Maria." We have exhaustively commented that potential risk does not equal exposure and these inaccuracies must be corrected.*	No changes to this section are recommended. DACs are defined by the Cal EPA as described in the General Plan.
2. *Page 5. "Relative to other communities in California, ~~Santa Maria experiences higher rates of pesticide exposure, as~~ the majority of census tracts in the city are above the 80th percentile for pesticide use in CalEnviroScreen 4.0. ~~Pesticide use during agricultural production poses significant public health risks since both short-term and long-term~~ Exposure to certain pesticides are linked to serious illnesses such as cancers, pregnancy complications, and developmental issues—especially for children, pregnant women, older adults, and agricultural workers. DACs that are located near agricultural fields, including farmworker communities in and around Santa Maria, could face heightened exposure risks. We have exhaustively commented that potential risk does not equal exposure and these inaccuracies must be corrected.*	Recommend revising as follows: *Relative to other communities in California, Santa Maria experiences higher rates of pesticide exposure, as the majority of census tracts in the city are above the 80th percentile for pesticide use in CalEnviroScreen 4.0. ~~Pesticide use during agricultural production poses significant public health risks since both short-term and long-term~~ Exposure to certain pesticides are linked to serious illnesses such as cancers, pregnancy complications, and developmental issues—especially for children, pregnant women, older adults, and agricultural workers. DACs that are located near agricultural fields, including farmworker communities in and around Santa Maria, could face heightened exposure risks.*
3. *HEJ Page 7. "~~H-2A Housing. The increasing number of H-2A Visa workers in agricultural jobs and~~ the associated requirements for employers to supply worker housing have heightened the need for ~~increasing the amount of safe and affordable housing in the city.~~" We appreciate the appropriate deletions elsewhere from the Policy Frameworks Draft; this final reference needs to be deleted to conform with the City's dedication to fair housing.*	Recommend revising as follows: *~~"H-2A Housing. The increasing number of H-2A Visa workers in agricultural jobs and~~ The associated requirements for employers to supply worker housing have heightened the need for increasing the amount of safe and affordable housing in the city.*

4. *"~~Policy HEJ-1.1: Protect against industrial pollution. Prevent industrial and commercial facilities~~ from exposing sensitive land uses (e.g., schools, playgrounds, housing, hospitals, senior centers, and daycare centers) to harmful air pollution and toxic chemicals, especially in DACs that have experienced disproportionate pollution burdens, by carefully analyzing proposed development and the ~~expansion of industrial and commercial uses.~~" Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	It is important to consider incompatible uses and impacts to sensitive land uses from proposed and expanded development. Therefore, staff recommends the following changes to Policy HEJ-1.1: Protect against <u>potential exposure to</u> ~~industrial~~ pollution. <u>Avoid siting new sensitive land uses (e.g., schools, senior centers, and daycare centers) near existing industrial, commercial, and agricultural uses which have the potential to</u> ~~Prevent industrial and commercial facilities from exposing sensitive land uses (e.g., schools, playgrounds, housing, hospitals, senior centers, and daycare centers) to~~ <u>result in exposure to</u> harmful air pollution and toxic chemicals, especially in DACs that have experienced disproportionate pollution burdens, by carefully analyzing proposed development. ~~and the expansion of industrial and commercial uses~~
5. *"~~Policy HEJ-1.2: Enforce truck routes. Ensure local adherence to the City's most recent truck routes~~ map and regulations that aim to reduce significant traffic and pollution impacts on homes, schools, ~~childcare centers, senior centers, and other sensitive land uses.~~" Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	Policy HEJ-1.2 is required per Assembly Bill (AB) 98, requiring the City to identify and establish specific travel routes for the transport of goods, materials, or freight for storage, transfer, or redistribution to safely accommodate additional truck traffic and avoid residential areas and concentrations of sensitive noise receptors.
6. *"~~Policy HEJ-1.4: Promote healthy farming techniques. Support sustainable agricultural practices in~~ and around the City of Santa Maria. Action HEJ-1.4.1: Support the Santa Barbara County Agriculture/Weights & Measures Department's efforts to identify communities that should be prioritized for education and interventions to reduce farms' pesticide use, limit pesticide drift onto communities, protect farm workers against pesticide exposure, ensure compliance with pesticide spraying time blocks, and support the use of Integrated Pest Management practices. Action HEJ-1.4.2: Work collaboratively with Santa Barbara County's Agricultural*	In accordance with SB 1000, the environmental justice element, or related environmental justice goals, policies, and objectives integrated in other elements, shall do all of the following: (A) Identify objectives and policies to reduce the unique or compounded health risks in disadvantaged communities by means that include, but are not limited to, the reduction of pollution exposure, including the improvement of air quality, and the promotion of public facilities, food access, safe and sanitary homes, and physical activity. (B) Identify objectives and policies to promote civic engagement in the public decision-making process. (C) Identify objectives and policies that prioritize improvements and programs that address the needs of disadvantaged communities. This policy and action items were

Commissioner's Office and the California Department of Pesticide Regulation to enforce the County's agricultural buffer zones and the installation of vegetative barriers to minimize land use conflicts; determine buffers for proposed projects; limit pesticide drift; and protect farmers, workers, and residents from harms related to ~~agricultural uses.~~" Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.	developed through the public process to address the SB1000 requirements noted above for Santa Maria. No changes are recommended.
7. *"Policy HEJ-1.8: Preserve water quality. Continue to ensure that Santa Maria residents have access to clean, safe, affordable, and accessible water for drinking, cooking, and sanitation, by working with the County, State, and Central Coast Regional Water Quality Control Board to guard against potential contamination ~~from fertilizer-related impacts and surface stormwater impacts~~." Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information."*	Recommend revising Policy HEJ-1.8 as proposed.
<u>*Land Use Element*</u> 1. *"Action LU-1.1.3: Amend the Area 9 Specific Plan to allow low-density residential uses along A Street, consistent with the LMDR designation." We oppose amending the Area 9 Specific Plan to allow low-density residential uses along A Street that are unrelated to the surrounding agricultural and industrial uses. This action is counter to many of the other pillars in the Draft General Plan and EIR. To maintain compatibility for agricultural, residential, and sensitive uses, we oppose inducing residential and sensitive uses into and near spaces intended for agricultural, industrial, and commercial uses.*	The preferred land use alternative selected by the City of Santa Maria City Council in 2023 included amending the general plan land use designation and zoning of the CPO designated and zoned area in Area 9 to single-family residential. A future Specific Plan Amendment would be required prior to any single-family residential development in this area. No changes to this Action are recommended.

2. *Policy LU-1.2 regarding Infill Development. This draft falls short in fulfilling opportunities to revitalize key areas of the City without impacting immediate and adjacent agricultural resources. The prior draft language should be restored.*	The proposed land use designations and increased land use densities were included in the preferred land use alternative that was selected by the City Council as a basis for the planned growth in the City. No changes are recommended.
3. *"Policy LU-2.1: Planned Annexation area. Expand Sphere of Influence and annex the Planned Annexation areas identified on the General Plan Land Use Map to meet housing and jobs development goals." Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	No changes to Policy LU-2.1 are recommended. The preferred land use alternative selected by the City Council included the SOI expansion and future annexation of land as described in the Final General Plan.
4. *Policy LU-2.3: Future Specific Plans…. • Buffer schools, parks, and homes from infrastructure, major roadways, the Santa Maria regional landfill, industrial land uses, agricultural land uses, and other land uses that may ~~produce odor or noise or negatively impact air quality~~ generate land use conflicts." Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	No changes to Policy LU-2.3 are recommended. Implementing appropriate buffers in future Specific Plans, specifically within the Planned Annexation (PA) area will be necessary. The policy states "other land uses", which may include a range of uses.
5. *"Policy LU-4.2: Industrial on major corridors. Prohibit new industrial, manufacturing, and heavy polluting uses in the Main Street and Broadway Corridor Mixed-use designated areas, as they detract from creating a walkable mixed-use environment. Policy LU-4.3: Mixed-use development. Support vertical and horizontal mixed-use development, integrating residential uses along Broadway and Main Street to promote a pedestrian-focused environment in the core of the city and reduce vehicle trips." We oppose the prohibition of industrial and other uses west of Blosser Road. We oppose changing the land use designation **west** of Blosser Rd from Commercial and Industrial to Corridor-Mixed Use. We are concerned that these changes would induce residential, other*	The Corridor Mixed Use (CMU) designation was developed through the Preferred Land Use Alternative phase of the project and was reviewed and selected by the City Council in 2023. This area is zoned PD/C-2, General Commercial. Mixed-use developments are currently allowed under the City's mixed-use Ordinance in the PD/C-2 zone. No changes to the zoning are currently proposed. New Industrial, Manufacturing, and heavy polluting uses within the City are required to be located within the appropriate industrial zones in the City and outside of areas that are zoned for mixed-use residential types of developments. No changes to Policy LU-4.2 are recommended.

sensitive uses, and potentially DACs into and near working spaces, including industries that support agriculture, and result in predictable land use conflicts.	
6. *"Policy LU-5.3: Location of new housing. Discourage single-family housing production directly adjacent to high-intensity commercial, agricultural, and industrial uses, in favor of land use transitions and buffers between differing intensities of development." Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	Recommend revising Policy LU-5.3 as proposed. It is feasible for new housing to be located near agricultural areas provided that adequate buffers are planned and implemented as a part of future specific plans and development plans.
7. *This draft of the Land Use Element had introduced inconsistencies in its description and treatment of agricultural lands. For example, LU 9.1 says "Preserve agricultural resources in the city on land not proposed for future development: and LU-9.3 calls out "lands designated for agricultural uses" while page 6 states "No land within City limits is designated or zoned specifically for agriculture; agricultural uses operate as transitional uses until development is planned for an area." It would be important to have clarification and consistency before finalizing the plan.*	Policy LU-9.3, requires the Municipal Code to be updated to require buffers between new development and lands designated for agricultural use. This policy is intended to apply to areas that may be utilized for agriculture that are in existing city limits and within the unincorporated area of Santa Barbara County. The final General Plan was completed in accordance with direction from the City Council through selection of the Preferred Land Use Alternative which included the Planned Annexation (PA) area of 985-acres located east of Highway 101. Should this area be annexed into City limits and developed, agricultural buffers would need to be considered and implemented where required. No changes to Policy LU-9.1 or 9.3 are recommended.
8. *Policy 9.1: "…Preserve agricultural resources in the city on land not proposed for future development, specifically those with State or local importance…." The draft of this policy is inconsistent and undermines the future vitality of agriculture both within and adjacent to the City. The prior draft language should be reinstated.*	
9. *"Policy LU-9.3: Agricultural buffers. Update the Municipal Code to require buffers between new development and lands designated for agricultural uses. Examples of buffers include but are not limited to roadways, stormwater basins, and landscaped or open space areas."*	See response to #7, above. The agricultural buffer ordinance would be developed through a future effort with public input and required approval by the City Council. Policy LU-9.3 does not limit the types of buffers that could be included within the ordinance, it only provides an example of types of buffers that could be considered. No changes are recommended.

As stated previously, the uses allowed in the buffer and the total distance will determine whether buffers would be helpful or make land use conflicts even worse. For example, active recreational uses and unmanaged reservoirs for pests and diseases would not be helpful mitigation measures. The most useful approach is to exercise good land use planning. This includes industrial and commercial uses as potential buffers between agriculture and residential and sensitive uses.	
10. ~~*"Policy LU-12.4: Walking paths as buffers. Utilize walking paths and linear parks as a transition and/or buffer between non-compatible uses or noticeable changes in building scale or density."*~~ *Active recreational uses are not compatible as an agricultural buffer.*	See response to #7 and # 9, above. This policy addresses many types of uses that could be noncompatible. Agricultural buffers will be developed that are specific to that use. No changes are recommended.
11. *"Policy LU-13.1: Land use buffers. Require the use of buffers between incompatible land uses by using context-appropriate buffers such as berms, walls, landscaping, <u>walking and</u> bike paths, and arterial streets, where appropriate and depending on neighboring use, to avoid adverse impacts to either use. Action LU-13.1.1: Update the City's municipal code to protect sensitive land uses by, for example, requiring a buffer between sensitive uses and local sources of air pollution such as industrial and commercial facilities (e.g., warehouses, processing plants, factories, landfills, hazardous waste facilities) <u>and avoid locating new sensitive land uses near existing agricultural, commercial, and industrial facilities</u>. Developments should incorporate appropriate mitigation measures that reduce potential pollution exposure." Good land use planning is mutually beneficial to both types of uses.*	No changes to Policy-13.1 are recommended. This policy provides examples of buffers but does not limit the types of buffers that could be utilized. Action LU-13.1.1 addresses the development of a buffer ordinance within the municipal code which will be a future City effort through a public hearing process. Avoiding siting incompatible uses from each other is discussed in other policies in the Land Use Element (such as Policy LU-5.3). No changes are recommended.

12. *"Policy LU-13.2: Residential encroachment. Protect residential neighborhoods and schools from encroachment by incompatible nonresidential uses such as light industrial, general industrial, and heavy commercial/manufacturing, and the impacts associated with adjacent nonresidential activities. Protect existing agricultural, industrial, and commercial operations from residential encroachment, resulting in impacts to nonresidential activities." Good land use planning is mutually beneficial to both types of uses.*	No changes to Policy LU-13.2 are recommended. This Policy focuses on protecting sensitive land uses (residences and schools) from incompatible industrial, commercial, and manufacturing land uses. The protection of Agricultural resources from future residential types of development would occur through the establishment of buffers as described above.
Noise Element 1. *"Policy N-2.2: Industrial and agricultural traffic noise reduction measures. Evaluate and identify measures and strategies to reduce traffic noise from industrial and agricultural truck traffic, and coordinate with local businesses to implement the measures and strategies as needed. Action N-2.2.1: Coordinate with businesses to identify possible limitations on local truck traffic, including loading and unloading, specific routes, times, and speed limits appropriate for each zoning district, while ensuring compatibility with essential business operations. Action N-2.2.2: Work with local businesses and law enforcement to minimize traffic noise by encouraging the use of preferred routes and delivery times." Limitations on transportation options would adversely impact agricultural resources and are also counter to the emergency evacuation and response infrastructure goals outlined in the Safety Element. Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	Emergency response and evacuation planning would be considered through the implementation of Action N-2.2.2. The language in this Policy and Actions directs the city to look at possible traffic noise reduction measures that would be feasible to local businesses and law enforcement. Future work on this item would be required through thoughtful collaboration with local businesses, the City's Police and Fire Departments, and public input. No changes are recommended.

Safety Element 1. *Page 7. "Agricultural practices exacerbate local flood issues by causing pooling, reducing ground absorption, and blocking drainage systems." Agricultural discharges are regulated by the Water Quality Control Board. It is inappropriate to generalize agricultural practices or single out one industry. This reference must be removed. Furthermore, there are major technical flaws in this argument.*	Recommend making the changes outlined in item #1.
2. *"Figure S-7: Oil and Natural Gas Network." The Association has previously encouraged consideration of potential annexation of the Bradley Lands as a preferable alternative to annexation of prime agricultural lands on the Santa Maria Valley floor. Some argued this was not feasible due current or former oil and gas locations in Bradley Lands. Figure S-7 illustrates similar intensity of Oil and Gas in the southern portion of the proposed annexation alternative parallel to Highway 101.*	The area proposed for annexation in the General Plan was selected by the City Council through the preferred land use alternative. No changes are recommended.
3. *~~"Policy S-3.2: Agricultural runoff reduction. Work with the County of Santa Barbara to reduce off-~~site and urban flooding caused by agricultural runoff. Action S-3.2.1: Work with the County of Santa Barbara to educate agricultural operators on best management practices to address runoff and irrigation control and the implementation of efficient onsite drainage systems. Action S-3.2.2: Collaborate with local agricultural operators and the Cachuma Resource Conservation District to ~~implement and enforce agricultural runoff control measures.~~" Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information.*	Policy S-3.2, Action S-3.2.1, and Action S-3.2.2 provide direction for the City to coordinate with the County of Santa Barbara regarding any potential agricultural related runoff issues. No changes to this policy or action items are recommended.
4. *"Policy S-3.6: Dam and levee inundation safety." Action S-3.6.4: Support legal and technical efforts to retain the essential functions of*	Action S-3.6.4 was previously deleted.

Twitchell Reservoir for flood control and groundwater recharge <u>purposes.</u>	
5. *"Policy S-8.2, Climate resilient design. Require new development and redevelopment to incorporate climate-resilient design to mitigate the impacts of climate change. Action 8.2.1: Adopt regulatory standards such as CALGreen Tier 1 and 2 to encourage energy efficiency and climate-smart design for new development and redevelopment." We are concerned with the impacts to economic viability of going above and beyond California regulatory requirements, including the CA Building Code; voluntary incentives should be reinstated.*	Recommend the following revision to Policy S-8.2: Climate resilient design. ~~Require~~ <u>Encourage</u> new development and redevelopment to incorporate climate-resilient design to mitigate the impacts of climate change. Action 8.2.1 directs the City to adopt regulatory standards to encourage energy efficiency and climate-smart design for new development and redevelopment. The Action provides an example of CALGreen Tier 1 and Tier 2 but does not limit or require these standards specifically. The regulatory standards ultimately adopted by the city will be developed through a public hearing process with input from the public and decision makers.
6. *Limitations to transportation options identified elsewhere are counter to the emergency evacuation and response infrastructure goals outlined in the Safety Element.*	See response above regarding Noise Element #1.
<u>*Draft EIR and Alternatives*</u> *"Agricultural Resources-Project Impacts and Mitigation Measures* *"DEIR 4.1-10: "As such, future development adjacent to agricultural land would not lead to farmland loss due to potential conflicts between existing farming operations and new urban or non-agricultural uses. The 2045 General Plan Update would result in less than significant impacts as it would not result in the conversion of farmland to non—agricultural uses that have not already been evaluated in previous environmental documents and would not result in conflicting uses introduced adjacent to existing farmland."* *"DEIR 4.1-13. A majority of development facilitated by the plan would likely not create significant impacts, particularly for development that would be located in urbanized areas of the city. However, because implementation of the plan would allow for future conversion of Important Farmland and conflict with agricultural zoning*	Page 4.1-10 of the Final EIR states: The California Department of Conservation currently lists several sites within the city as either Grazing Land, Prime Farmland, or Unique Farmland. However, these sites have previously undergone environmental review for the conversion of agricultural land. For example, the area west of A street and north of Betteravia Road was evaluated within the Sphere of Influence Expansion Environmental Impact Report (SCH #90010930) in 1994 and the Area 9 Specific Plan Environmental Impact Report (SCH #2008071018) in 2011 wherein impacts to agricultural resources were determined to be less than significant. The Environmental Impact Report for the City's Sphere of Influence Expansion (SCH#90010930) documented the conversion of these agricultural resources to non-agricultural uses, and the City Council Resolution No. 92-136 presented a Statement of Overriding Considerations, which the Council adopted on September 15, 1994. Santa Barbara LAFCO approved annexation of

within the annexation area, impacts would be significant and unavoidable." *These statements are patently false. Please refer to the comments submitted by Somach Simmons & Dunn on behalf of the Association for additional information. The Draft EIR is woefully inadequate in its analysis of potential impacts to and mitigation measures to lessen potential impacts to agriculture under the Agricultural Resources and many other potential impact categories as listed throughout this letter and the comment letter submitted by Somach Simmons & Dunn on behalf of the Association. The individual and cumulative impacts to agriculture-related impact categories have not been properly identified, analyzed, or mitigated as required by CEQA, and must be adequately corrected in future drafts. Although analysis of the Bradley Lands annexation would have been preferred by the Association, it might also prove useful to analyze an alternative that prioritizes infill and annexes only the portion of lands north of Main Street and the block immediately east of Marian Regional Medical Center, both in the EIR and General Plan Land Use Alternatives.*	the project area to Santa Maria on November 23, 2004. Furthermore, to mitigate the conversion of these agricultural resources, the City adopted a "Greenbelt and Urban Buffer" resolution in 1994 (Resolution 94-9). The Greenbelt and Urban Buffer resolution established that the City would preserve agricultural and open space areas immediately adjacent to the City's Urban Boundary Limit. This resolution protects agricultural and open space areas adjacent to the city by prohibiting the city from expanding its Urban Boundary Limit into such areas. Because the impacts of the conversion of these agricultural resources on the site were previously offset by the establishment of the City's Greenbelt and Urban Buffer, impacts were found not to be significant (City of Santa Maria 2011). As such, conversion of the area known as Area 9 would not result in a significant impact to agricultural resources. Similarly, the area south of Main Street between Blosser Road and Hanson Way was evaluated within the Sphere of Influence Expansion Environmental Impact Report (SCH #90010930) in 1994. As part of the Sphere of Influence Expansion project, this area was assigned urban growth potential as part of the West Main Specific Plan and did not include area identified for future agricultural use. Conversion of this area would not result in significant impacts as the area has been previously evaluated and slated for urban growth in previous environmental analyses. The area east of South Blosser Road, south of West Stowell Road, and north of Battles Road was evaluated within the Blosser-Southeast Specific Plan Amendment Supplemental Environmental Impact Report (SCH #1994107909) in 2020 wherein impacts to agricultural resources were determined to be less than significant. The Supplemental Environmental Impact Report determined that the Blosser-Southeast Specific Plan area has been anticipated for non-agricultural use, including residential development, since the evaluation of the City's Sphere of Influence Boundary Amendment and Concurrent Annexation Program in 1992. As part of the

	Sphere of Influence Boundary Amendment and Concurrent Annexation Program, this area was assigned residential growth potentials and did not include area identified for future agricultural use. As such, conversion of this area would not result in a significant impact to agricultural resources. The area east of Blosser Road and south of Battles Road was evaluated within the Betteravia Plaza General Plan Amendment, Land Use and Zone Change and Development Agreement Environmental Impact Report (SCH #2015011029) in 2015. Impacts to agricultural resources within this Environmental Impact Report were determined to be less than significant as this area was identified an infill site located within the urbanized city, surrounded by urban development and is planned and zoned for future urban development. Prior to the preparation of the Betteravia Plaza General Plan Amendment, Land Use and Zone Change and Development Agreement Environmental Impact Report (SCH #2015011029), an Initial Study – Mitigated Negative Declaration was prepared for this area indicating the site had a land use designation of Light Industrial and a zoning designation of Light Manufacturing that has since been changed to allow for retail commercial and professional office uses. As the area has been designated for development and has been previously evaluated in previous environmental documents, impacts related to the conversion of agricultural land would be less than significant. The Final EIR fully analyzes the 2045 General Plan Update's impacts to Agricultural Resources and discloses that while the 2045 General Plan Update includes policies which are intended to minimize future impacts to agricultural lands in and around Santa Maria, there is no set of General Plan policies or mitigation measures that could feasibly reduce the identified impact to agricultural lands in the Planned Annexation area, should that be annexed and developed in the future. Although the Infill Only Alternative would be the Environmentally Superior Alternative, this alternative would not fulfill the primary

	objectives of the 2045 General Plan Update, including the provision of housing quality and various housing choices or improving opportunities for connected growth. Further, the Infill Only Alternative would not enhance new and existing neighborhoods such that each neighborhood would be a Complete Neighborhood or provide innovative housing and may result in the City failing to meeting its RHNA obligations in accordance with State law as it would significantly reduce the affordable housing options and limit new housing to infill only and redevelopment. A Statement of Overriding Considerations addressing this impact has been provided as Attachment E to this report.
Letter 2: Urban Planning Concepts, Inc. dated February 13, 2026	
The purpose of this letter is to provide information regarding the Guggia/DeBernardi property, that we refer to as Planned Annexation Area #1, which is located within the east side Planned Annexation Area addressed in the General Plan Update. This letter documents the planning work completed to date, demonstrates consistency with the vision and policies of the Draft General Plan, and requests that the Conceptual Land Use Plan and Project Description for this property be included in the General Plan and Draft EIR record as an example of how the properties could be developed in the future. However, this submittal is not a request for project approval, annexation, or entitlement at this stage. We respectfully request that the Planning Commission, as part of its recommendation on the General Plan Update and Draft EIR, acknowledge the Conceptual Land Use Plan and Project Description for the Guggia/DeBernardi property as consistent with the Draft General Plan as an appropriate implementation framework within the Planned Annexation Area.	This area is included within the area that is identified as the Planned Annexation (PA) area on the Land Use Policy Map. Any future development of this area will not be able to occur until after the City's SOI has been changed and the area annexed through the LAFCO process. A specific plan and additional environmental review will also be required. This letter is noted as a part of the record for the General Plan Update.

Letter 3: Urban Planning Concepts, Inc., dated February 16, 2026	
Introduction *Pictures There are too many pictures that take up at least 80 pages of this 290-page GP document. As suggested before, these pictures could have been reduced and made into a collage page. Pictures are not required This collage for each element could replace the repeated generic aerial photo that looks like any city. The Goals and Policies section are the most important part of the GP Element. Request the Planning Commission direct staff to work with the community and consultants to revise the cover page of each element.*	The photos were included in the draft General Plan that was circulated for public review and the City received one comment from this commenter regarding a concern with the number and placement of photos within the plan. No other specific comments or concerns regarding the photos were noted. It is common for current General Plans to include photos throughout, based on the element topic. No changes are recommended.
Fig INT-2. All of the regional maps in this GP must include the 1500-acre city owned Los Flores Park and future Landfill. It is referred to many times, so people need to know where it is located. All city maps should clearly note the SMAPD boundaries. This will make it clear to LAFCO that 2,500 acres are not available for housing.	Los Flores Park is not located within City limits and is not identified by the City as a city park. The Land Use Policy Map depicts the Santa Maria Airport area. The Santa Maria Airport Specific Plan identifies the type and density of any future development in that area and is the document to refer to regarding development in that area.
Fig INT-3, Page 11 - We requested that on this map that includes the PA areas be Identified as *PA 1 Guggia and DeBarnerdi* *PA 2 Cal Giant* *PA 3 the rest of the PA areas.* *As noted on Page 11, We had asked that this paragraph bullet these Planning Areas and provide more information about each one and what is being proposed as Pre-zoning. This will help refer future PA's and Specific Plans maps that go along with them.*	The Land Use Policy Map identifies the Planned Annexation Area for future development. The phases for build-out of this area and the names of the areas will be determined/developed through future review, including through pre-zoning for the LAFCO annexation application and process.
Page 13 - Project History should have been expanded to include a summary of the 1993 Sphere of Influence and Annexation Study that planned the annexation of 3,000 acres and helped the City grow from 65,000 people to 110,000.	Information on the prior 1993 SOI and Annexation Study is available in those specific documents for reference and is not required to be included in the 2045 General Plan.
Page 15 - Delete word Implementation as it is not used in the rest of the General Plan. Only use the ACTION.	Recommend change to delete the word implementation.

Land Use Element *Page 11 - The last sentence refers to the Entrada Specific Plan (1976). This plan needs to be retired as it is inconsistent with the Objective Desing Standards, and the city has not used this SP in years.*	The Entrada Specific Plan is not proposed to be retired at this time. This is an action that the City Council could consider in the future through updates to the Municipal Code following the adoption of the General Plan.
Page 12 - We will be asking that all reference to the old FAR standards be deleted.	Government Code Section 65302 states that the land use element shall include a statement of the standards of population density and building intensity recommended for the various districts and other territory covered by the plan. Floor Area Ratio (FAR) is a current planning practice that is used in General Plans to designate the appropriate building intensity for Commercial, Industrial and Professional Office zones. No changes are recommended.
Page 13 - The third PAR needs to be changed to SOI and annexation.	Recommend adding SOI to this paragraph.
Page 14 - This is an old planning method that most cities are retiring. It is not consistent with the ODS, and most high density /mixed use projects will not meet this standard. Delete all references in the LUE to FAR's	See comment above regarding FAR.
Delete Residential Agricultural (RA) designation. It has never been used in the city. Include in all the residential Designations JADU's and ADU's.	The RA zone designation was not recommended to be deleted as a part of the Preferred Land Use Alternative selection. No changes are recommended.
Page 16-17 - Delete all reference to FAR as this is no longer a valid Planning Tool.	See comment above regarding FAR.
Page 21 - Bullet 7 needs to be revised to require 2.5 aces per 1,000 in order to be consistent with the current park land standard.	The City Council has adopted the standard of 5-acres of parks per 1,000 people. No changes are recommended.
Page 21 - Policy LU-2.2 Deleted this provision as it does not make sense. What kind of Connection and what core of Santa Maria? Are you asking to have pedestrian bridges over 101???	Policy LU-2.2 would ensure that future developments located within the Planned Annexation (PA) area are planned as complete neighborhoods with multi-modal access to adjacent developed areas that allow for multi-modal access to the developed core area of the City (bike paths, roads, sidewalks, for example). This policy is flexible and intended to allow for creativity in the design of future developed areas.

Page 22 – Policy 4.1.1 retire Estrada Specific Plan and delete this Policy or revise it to refer to the Objective Design Standards (2025)	See comment above regarding the Entrada Specific Plan.
Page 23 - Policy LU-3.5 this policy should be revised to support the parking structures as it exists. *Policy LU 3.6 is in conflict with 3.5. need to delete one of them.*	Future parking solutions within the Downtown Specific Plan area may be considered. No changes to Policy LU-3.5 are recommended. Policy LU-3.5 directs the City to support parking solutions that reduce surface parking lots within the Downtown area to better utilize land and promote pedestrian walkability. Policy LU-3.6 directs the City to continue to identify and develop shared parking facilities within the Downtown Specific Plan area to support future mixed-use developments in the area. Shared parking facilities are a method of reducing the number of surface parking lots in the City which is consistent with the direction in Policy LU-3.5. No changes are recommended.
Page 24 - Action LU-4.12 This action is conflicting with the main and Broadway being designated State highway Truck Routes. Suggest deleting it.	Caltrans is currently in the process of reviewing truck routes on Main Street and Broadway and looking at strategies with the City to implement the Downtown Multi-modal streetscape plan. This Action is appropriate to include in the General Plan which is a visionary document to the year 2045.
Page 24 - Policy LU 5.2 it is important to note that 10,000= infill units will not be close to parks, schools, etc. Suggest deleting the last part of this sentence to be honest.	Policy LU-5.2: Siting of infill development. Promote new infill housing in areas that are underutilized and in close proximity to parks, recreation, public amenities, and local goods and services. This policy is consistent with the land use density changes that were included in the Preferred Land Use Alternative selected by the City Council and also applies to any future redevelopment of areas within the City. Do not recommend deleting this policy.
Page 24 - Action LU 6.5-1 and Action LU-6.6-1 we agree with these actions but also need to make sure to delete FAR requirements.	See comment above regarding FAR.
Page 28 - Policy Lu-12.1 add this phrase…gathering places should be placed to be protected by the wind.	No changes recommended. The placement of outdoor seating areas and gathering places can be determined through the Planned Development process when projects are being developed.

Page 12 - We will be asking that all reference to the old FAR standards be deleted.	See comment above regarding FAR.
pes Circulation Element *Page 5 - There is only one heliport in Santa Maria at Marian Hospital, The other three listed here are located on the oil platform over 3 miles off the coast.*	Recommend making this change.
Page 10 - There is no comment on parking in local streets and neighborhood because of ADU's. This is a huge challenge for the future.	The regulation of parking for ADUs and JADUs is per State law and addressed in the City's Municipal Code (Title 12). No changes are recommended.
Short- and long-Term transit *This paragraph should include SMOOTH and other local transits operations besides SMRT. Uber. Lyft. Etc.*	Private local transit operations are not operated by or controlled by the City. No changes recommended.
Figs CIRC-1, CIRC-2 - This figure shows no road patterns for the Planning Area on the east side of Santa Maria. There should be something planned for these annexation areas. Fig CIR 2 shows no bike trails in the annexation areas.	Future roadway planning will be completed through the development of Specific Plans for the Planned Annexation (PA) area. The plan does show how existing roadways would connect to this area. No changes recommended.
Page 16 - Multi-Use Paths Class 1 are in the Specific Plans of street trails add to this paragraph The class III bike trials are becoming more of a problem because fo the parking demand for ADU's *Is there a need for charging stations for these micro bikes?*	No changes to the Class III bike trails are recommended by the Public Works Department at this time.
Page 21 - Again no plan on CIR -4 for the east side of the freeway for pedestrian trails.	Future planning for pedestrian trails will be completed through the development of Specific Plans for the Planned Annexation (PA) area. The plan does show how existing roadways would connect to this area. No changes recommended.
Page 22 - CIRC 1.1 What is a Complete Street??? need to have exhibits. Action CIR 1.1.1 Delete Too costly to convert exiting streets to complete streets. CIR 1.3 Delete as there is not enough space to do this design in private projects. *CIRC 1.2 delete reference to private streets. There is not enough road width to do complete street designs.*	The Complete Streets Act and Office of Land Use and Climate Innovation (LCI) *Update to the General Plan Guidelines: Complete Streets and the Circulation Element* emphasize planning for a balanced multimodal network that meets the needs of all users in a manner suitable to local context, implemented through adopted policies, standards, and prioritized projects. The Circulation Element follows this framework by:

Page 26 - Delete the last sentence. Projects are already overtaxed and this would need the vote of the city.	(1) establishing complete streets goals and policies (Goal CIR-1), (2) mapping the multimodal system through the Street Network, Bikeway Network, and Pedestrian Priority Improvement Network diagrams, and (3) providing implementable actions including pursuing retrofit funding, updating street standards, and conditioning new development to provide multimodal amenities to the extent feasible. Consistent with a context-sensitive, network-based approach, the City also plans for the safe and efficient movement of freight, emergency response vehicles, transit vehicles, and other large vehicles primarily on designated arterials and collectors, while local residential streets are designed and managed primarily for neighborhood access, lower speeds, and safe walking/rolling and bicycle compatibility. Local streets therefore contribute to complete streets through ADA-compliant pedestrian facilities, safe crossings and connections to the designated bicycle and transit corridors, and appropriate speed management rather than requiring every corridor to accommodate every mode, including freight or high-capacity transit, on every block. No changes to Policies are recommended.
<u>Conservation and Open Space Element</u> *Page 12 - Correct the last paragraph the groundwater basin is NOT in overdraft. This has been determined by the courts.*	Will include a change on Page 12 to delete the statement regarding potential overdraft of the Santa Maria Valley Groundwater Basin.
Page 13 - The percentages do not add up right… Correct this paragraph.	This section is discussing the overall decrease in emissions for commercial/industrial, residential, and transportation sectors. These percentages are not intended to add up to 100 percent, it is just noting the overall decrease in each area. No changes recommended.
Page 14 - Historic District …the city needs to change the 50-year standard to …a year. anything before 1960 may need to have a historic review report	Under the California Environmental Quality Act (CEQA), structures that are typically 50 years old or older are considered potential historical resources. While 50 years is the general threshold for evaluating significance, structures younger than 50 years can also be designated if they possess exceptional historical significance. No changes recommended.

Page 20 - What mining operations ???are you talking about the riverbed? Is that in the SLO county?	While "mining" often refers to hard-rock extraction, in regulatory and economic contexts, it is an umbrella term for the extraction of all non-renewable, naturally occurring resources, including oil and gas uses.
Page 19 - Delete reference to "NO NET LOSS" this is very bad wording delete Action COS 1.1.2	Action COS 1.1.2 applies only to areas that are identified as sensitive habitat or a wildlife corridor area. It requires new development to be located outside of these areas. Future projects would be subject to the mitigation measures in the Final EIR for the General Plan (should the project use this document for CEQA), or other mitigation developed through a CEQA document specifically developed for that project. No changes are recommended.
Page 20 - Delete the words "coordinate with the county" Delete COS 1.2 and Action1.2.1 give county too much control over annexations.	Recommend revising Policy COS 1.2 as follows: Policy COS-1.2: City greenbelt. ~~Coordinate with Santa Barbara County to~~ Develop a continuous system of greenbelts and natural corridors. No changes to Action 1.2.1 are recommended.
Page 20 - Policy COS 1.3 and Action COS 1.3.1 the city does not have money to do this, and the priority should be on active recreation.	This policy and action would provide the City with the direction to facilitate/implement these actions in the future should the City elect to do that. No changes are recommended.
Page 21 - Delete all of COS 1.-4 and the action items Urban wilding the city does not have money to do this. Delete all of COS 2.1 Why would the city collaborate with the county on ag land in the city??? *Delete Action COS 2.1.1 and 2.1.2 This whole action item needs to be deleted*	Policies addressing urban rewilding are required to be included in General Plans due to Senate Bill 1425 (SB 1425), which requires cities and counties to update their local open-space elements by January 1, 2026. The update must include plans for rewilding opportunities, climate resilience, and equitable access to open space. See responses to Letter number 1 above regarding COS 2.1 and related actions.
Page 22 - Delete COS 2-3 and all the action items as there is no mining in the city of Santa Maria. Policy COS 3.1 the urban canopy only applies to the developed parts of the city. Not SMAPCD or area 7 or 9 until they are developed	While "mining" often refers to hard-rock extraction, in regulatory and economic contexts, it is an umbrella term for the extraction of all non-renewable, naturally occurring resources, including oil and gas uses and infrastructure.

Noise Element *Fig N-1 - Insert the new ALUC noise maps from 2023* *smx_alucp_v2_final.pdf*	The Airport Land Use Compatibility Plan contains the most updated maps. The General Plan references this document. No changes are recommended.
Page 9 - This section should make it clear that the Railroad and the SMAP do not run at night	While they do not currently operate overnight, this could change in the future. No changes are recommended.
Fig N-3 - Replace this map with the Noise contour map from the EIR Fig…____	Figure 4.6-3 - Existing Traffic Noise Contours in the EIR is the same figure that is included in the Noise Element (Figure N-3). No changes are recommended.
Page 13 - Action N 1.2.1 The way this action is written every project would be required to have a noise study? Revise to only apply to those projects with noise generating uses.	Action N-1.2.1 requires discretionary projects that would be located adjacent to sensitive noise receptors to complete a noise study to determine if they will generate noise that would exceed the allowable noise levels for adjacent noise-sensitive land uses. This requirement does not apply to ministerial permits.
Page 15 - Action N-2.1.4 revised this action to state that exterior noise levels are allowed to be at 75dB along major corridors (Ord 12-7.14a)	Municipal Code Section 12-7.14a applies to properties that are zoned R-2, medium density residential. It states that outdoor living areas such as patios and balconies may be incorporated into multifamily development projects in areas which experience elevated noise levels. These noise levels may not exceed the "Normally Unacceptable" Community Noise Exposure levels (75dB and above) specified in Figure 2 of the "Noise Element Guidelines" (Appendix C of the California General Plan Guidelines). Action N-2.1.4 directs the City to update the Municipal Code to require new residential and mixed-use development within the 60 dBA CNEL noise contours or higher of transportation corridors to submit an acoustical analysis and incorporate noise reduction strategies, such as vegetation buffers and physical sound barriers, as necessary to meet the requirements of the Noise Ordinance. The incorporation of balconies and patios into multifamily projects in the R-2 zone would not be impacted by this Action. Therefore, no changes are recommended.

Safety Element *There should be a paragraphs and references in this Element of the Safety support agencies. Highway Patrol, sheriff, county fire, AMR, Marian Hospital, Heliport, etc. this is so important to know what the resources are in this region.*	A discussion of the Fire Department and Police Department operations is included in the Public Facilities and Services Element. Marian Medical Center is discussed in the Environmental Health and Justice Element. No changes are recommended.
Page 14 - Solid Waste. This paragraph needs to include a sentence on the future landfill site at Los Flores. The city purchased this ranch about 15 years ago for a new landfill stie after the existing one closes.	The Public Facilities and Services Element includes a summary of solid waste facilities and the landfill. No changes are recommended.
Page 7 - Flood and Dam…It paragraph and other sections and policies should clearly note who is responsible for the Dam. TMA, SMWCD, BLM. And then FCD	This information is included in the Public Facilities and Services Element. No changes are recommended.
Page 26 - Goals and Policies on this page related to the Twitchell Dam should list Twitchell Management Authority (TMA) and Santa Maria Water Conservation District (SMWCD) and BLM. Flood Control does not have authority on the Dam. These policies should be corrected.	Policy S-3.6 and Action S-3.6.2 reference coordination with Santa Barbara County Flood Control and other local and State agencies as required. The General Plan is a long-term comprehensive planning document through 2045, and responsible agencies could change in the future. No changes are recommended.
Page 31 - These policies S-6.6 to S-6.9 should include reference to all other local support services listed above.	Local support services would inherently be involved with the development of the programs noted in these policies. The General Plan is a long-term comprehensive planning document through 2045, and responsible agencies could change in the future. No changes are recommended.
Health and Environmental Justice Element *Page 7 - There is now an added sentence in the H2 A paragraph about ADU's. It would seem that ADU's and their known benefits and impacts to the community warrant a separate paragraph The city has issued over 2,000 ADU permits. There is no comment on parking in local streets and neighborhood because of ADU's. This is a huge challenge for the future and no of these neighborhood streets will ever be Complete Streets.*	Recommend revising as follows: ~~H-2A Housing. The increasing number of H-2A Visa workers in agricultural jobs and~~ The associated requirements for employers to supply worker housing have heightened the need for increasing the amount of safe and affordable housing in the city. No other changes are recommended.

Page 17 - Goal HEJ -3, Policy HEJ 3.1 and 3,2 Remove reference to "Complete Streets". There is no definition of what that means and the city does not have funds to make this happen. Also, many existing streets are now impacted by ADU Parking so there is no space to add amenities. Also, these Complete Street Policies do not apply to private driveways or internal roads.	See response regarding Complete Streets policies and ADU regulations above.
Page 23 – Delete this policy and action item: Policy HEJ-8.6 and Action HEJ – 8.6.1, Develop Community Benefit Agreements.	This policy and action is included in the General Plan to provide the City Council with the opportunity to develop this type of program in the future should they elect to do so. No changes to this Policy and Action are recommended.
All of the DAC areas are located in the existing city and not near the Planning Areas. The PA will not be impacting those areas. This is just adding another layer of costs on future housing and development projects *Also, what about large city projects that might be in these areas. DELETE this Policy and Action item*	Disadvantaged communities (DACs) are areas identified by the California Environmental Protection Agency or low-income areas that are disproportionately affected by environmental pollution and other hazards identified in CalEnviroScreen 4.0 that can lead to negative health effects, exposure, or environmental degradation. A multistep process, including extensive community engagement, was used to identify Santa Maria's DACs. This is required per SB 1000 to be included in Environmental Health and Justice Elements. No changes are recommended.
<u>*Public Facilities and Services Element*</u> *Page 3 - Why did this section include facts? How much state water is the city relying on and how much groundwater. It is critical that this information be in this document.*	The most updated information regarding groundwater can be found in the Utilities Department annual reports such as the Urban Water Management Plan and Capital Improvement Plan (CIP). Referring to these reports for the most updated information allows the General Plan to remain relevant and avoid frequent updates to this Element.
Page 4 - Need to include a full discussion Green Canyon drainage through the middle of the city of Santa Maria	This section provides a general overview of stormwater infrastructure in the city. No additional changes are recommended.
Page 7 - Should add AHC that has 4 years college degree.	Recommend including this information.

Page 7, PFS-2 "…future school site" There are no future school sites on the map. with 50,000 people there will need to be 10 more schools and two more high schools. Where are they going to be located?	The Land Use Policy Map identifies a potential location for a future High School on the west side of North Broadway, just south of Preisker Rd. This Element notes that as educational services and facilities are not directly provided by the City of Santa Maria, the City's role and responsibility are limited. However, the City recognizes that to grow properly, adequate school sites must be planned for. The continued coordination and input from the area's school districts will be imperative to identify the appropriate location for new schools as a part of planning efforts. For more information on the location and distribution of existing and future school sites, please see the Community Facility land use designation in the General Plan Land Use Map in the Land Use Element. Additional information on existing schools and plans for the future development of schools in the Santa Maria Bonita School District and Santa Maria Joint Union High School District can be found at www.smbsd.org and www.smjuhsd.org. No changes are recommended.
Page 9 - Need to show the number of officers per 1,000 and the number of fire fighters per 1,000.	Annual updated information regarding staffing is provided by the Police and Fire Departments. Rather than include specific numbers which change and would necessitate frequent updates to the General Plan, this Element references these reports. No changes are recommended.
Fig PFS-3 - Need to amend the map to include the Orcutt Fire stations and proposed fire stations in Orcutt And Santa Maria. Need to add the Sheriffs Office on foster road. what about police station on the east side of the freeway. This is for the future not just what is there today.	Figure PFS-3 includes police and fire stations within the City limits. A future fire station is proposed adjacent to Blosser Rd. in the Blosser Southeast Area 5B Specific Plan. The number and location of future police and fire stations will be determined through future planning efforts, including Specific Plans, once more information is available regarding the type and intensity of developments proposed. No changes are recommended.
Page 12 - Solid Waste Chapter needs to include a discussion on Los Flores landfill. What is the schedule for this landfill to be constructed?	The Public Facilities and Services Element of the General Plan includes Goals and policies addressing solid waste. Specifically, Policy PFS-9.3: Regional cooperation, states: collaborate with other agencies to develop coordinated waste management solutions,

	supporting a unified approach to recycling, waste diversion, and sustainable practices. According to the Final EIR, the Santa Maria Regional Landfill has a maximum permitted daily throughput of 8,820 tons per week and a remaining capacity of approximately 2,845,000 cubic yards and is estimated to remain operational through 2034 (California Department of Resources, Recycling, and Recovery [CalRecycle] 2025a). Beyond 2034, solid waste generated by the city may be diverted to other nearby landfills, such as the Cold Canyon Landfill. The City's Utilities Department will continue monitoring the remaining capacity of the landfill and the General Plan provides flexibility in options regarding waste management solutions if/when the existing landfill reaches capacity.
Page 12, Page 3 - Annexation talks about WWTP capacity is sufficient for present needs projected flows at full buildout will exceed that capacity???? *There is nothing in the General Plan that details what is the current capacity, current design and what is needed for future 16,000 units. Is the current plant able to serve all of the future 160,000 people??? Give us some facts???*	This information is included in Section 4.8, Utilities and Service Systems, of the Final EIR prepared for the General Plan Update. Policy PFS-1.2: Wastewater system, states the following: Maintain a wastewater collection, treatment, and disposal system capable of meeting the daily and peak demand of existing and future residents and businesses. The Utility Capacity Study is currently in the process of being updated and is the best/most current source to obtain information regarding projected sewer flows.
Page 17 - Delete Action PFS 3.1.2 . we do not need additional fees for development *Policy PFS- 4.3 Schools….How many schools has the city determined will be needed and where will they be located for the infill development and the annexation areas?* *Page 18 - Library standards are listed on Page 15 and then again in Policy PFS S-1 Why maintain this old ratio when the libraries are being used 30-40 % less? Need to update these standards in light of the internet.*	No changes to these Policies and Actions are recommended. Action PFS-3.1.2 provides the City Council with the option to direct staff to study a potential assessment district for funding regional stormwater programs. See response above regarding future school sites. The library standards were reviewed by the library director and city staff and were determined to be correct for use in the General Plan.
Page 18 - Goal PFS-6 and Policy PFS-1. All of these Public Facilities policies need to be revised as most public buildings are not open to the public anymore and they have security, cameras and locked spaces. These policies should reflect what is happening now.	The General Plan is a long-term planning document that includes Goals, Policies and Actions to facilitate future use of public facilities should this be directed by the City Council. This provides an opportunity for future consideration. No changes are recommended.

Page 19 - Policy PFS 6.5 this is not allowed by State law. All school sites are fences, secured, and have cameras to monitor the public. Delete this provision.	See response to Goal PFS-6 and Policy PFS-1 above.
Page 19 - No information on how many Fire fighters are needed for now and at full build out? How many fire stations will be needed on the east side of town and to added infill development.	See response regarding Figure PFS-3 above.
Page 20 - No mention on the Los Flores Landfill. When is that going to be needed.	See response above.
Page 26 - Schools. All of the school policies should have already been done with this plan. Policy PFS-10.1 does not list Santa Maria High School District? Do they have enough high schools for the full build out of the city.?	See response above regarding future school sites.
<u>*Economic Development Element*</u> *Page 3 - It should include employment opportunities in VSFB and the growing medical and educational opportunities in the region.* *Page 7 – Include HBACC, Marian Hospital and VSFB and the SM Airport. This section should refer to the 4-year programs at AHC that have just started.* *Econ 2-3 – Change this policy to start with the word "Encourage "not "~~Prioritize.~~" We do not want this policy to be used against the annexation application.* *Policy Econ 2.8 - This Needs to be a **GOAL** for the SOI and annexations.*	VSFB and Marian medical center are discussed on page 7 of this Element. A reference to the 4-year program at AHC can be added to the Public Facilities and Services Element and this Element as well. No changes to Policy Econ-2.3 are recommended as this is consistent with direction provided in the selected Preferred Land Use Alternative. Policy Econ-2.8 is clear regarding direction for SOI and annexations. No changes are recommended.
<u>*Recreation and Parks Element*</u> *Page 7 - Now the total is 30 parks instead of 27…how much acreage is now maintained by the city.* *Page 11 - Please include the total acreage for the city parks.* *Page 13 - Delete bullet 4 as there are now two parks Acquistapace and Carmen lane and another under construction*	Rather than list all parks and recreational facilities together by acreage, the Element includes a separate map and table listing Recreational Facilities and a separate map and table for Parks Facilities. The leisure needs assessment that is completed by the Recreation and Parks Department includes the full acreage of existing parks in the City and this document is updated every 5 years. No changes are recommended.
Page 13 - We agree that for consistent and equity that the city standard be 2.5 acre per 1,000. Also the city can barely afford to maintain the parks that they have.	No changes to this policy are recommended. The City Council has adopted 5 park acres per 1,000 as the current standard.

Paragraph 4 Park Quality is poorly written. The sentence should state that at 5 acres per 1,000 the city should currently have 550 acres but only have 270. At full build out, the city at 5 acres per 1,000 would need to have 800 acres of parkland to acquire and maintain. If the ratio is 2.5 acres per 1,000 the city would have 400 acres.	No changes to this policy are recommended. The City Council has adopted 5 park acres per 1,000 as the current standard.
Page 14 - The table REC- 3 provided is not complete as it does not give the PC and CC information on want is the current level of service for each of these categories and what the city should plan for in the future. Park standard needs to be changed to 2.5 acres per 1,000. Or the city needs to change their inventory and include Los Flores Ranch, school playgrounds including AHC, and the many private cub houses, pools, and play areas.	No changes to this policy are recommended. The City Council has adopted 5 park acres per 1,000 as the current standard. Los Flores Ranch is not located within City limits and is not a designated City park. Private amenities that are not accessible to the general public cannot be included as a city park. However, developers may include open spaces in project design that could be designated for public use.
Page 17 - Policy REC-2.1 Revise this policy to only have 2.5 acres per 1,000. Action REC 2.1.1 add to this that the park classification should include schools and private amenities.	No changes to this policy are recommended. The City Council has adopted 5 park acres per 1,000 as the current standard. Private amenities that are not accessible to the general public cannot be included as a city park. However, developers may include open spaces in project design that could be designated for public use.
Page 18 - Action REC 2.2.1 this provision or add another that describe the Landscaping and Lighting District Tax that is paid for by new residents.	Action REC-2.2.1 states: Regularly review and update park mitigation fees to reflect current needs and construction costs. No changes to this Action are recommended.
Policy REC 3.3 and 3.4 3.5 it is too bad that this was not discussed in the body of this element. Could include PCPA, High School program orchestra, Civic theater, etc. also referred to OASIS, and other senior centers	No changes are recommended.

Letter 4: Urban Planning Concepts, Inc. PowerPoint, February 18, 2026	
Requested Policy Changes: *Land Use Element* *Page 12, 14, 16-17 Delete all references to the old Floor Area Ratio (FAR) as this standard no longer applies in the planning profession based on new Housing Laws that require High Density Housing and Mixed-Use projects to be much higher than 1 or 2 FAR.*	See comments above regarding FAR. No changes are recommended.
Action LU-2.1.1 ~~In collaboration with the County of Santa Barbara~~. As soon as possible the city shall submit a LAFCO application to modify the city's Sphere of Influence to include the Planned Annexation Areas. *The city is the lead agency on these applications not the county. The county does not support the Planning Area application as noted in their comment letter.*	Recommend revising as follows: Action LU-2.1.1: ~~In collaboration with the County of Santa Barbara,~~ The city shall submit a LAFCO application to modify the city's Sphere of Influence to include the Planned Annexation Areas.
Delete all of Policy LU- 2.2 *~~Policy LU-2.2: Connections to annexed area. Require new development within future annexation areas to provide infrastructure, multimodal, and public realm connections to the developed core of Santa Maria~~There is no explanation as to what the city is looking for to connect PA 1 to the downtown four miles away?*	Policy LU-2.2 would ensure that future developments located within the Planned Annexation (PA) area are planned as complete neighborhoods with multi-modal access to adjacent developed areas that allow for multi-modal access to the developed core area of the City (bike paths, roads, sidewalks, for example). This policy is flexible and intended to allow for creativity in the design of future developed areas.
Policy LU -2.3 Revise Bullet – Provide 2.5 acres per 5 acres of parks per 1,000 residents, per the City's park service standard, and plan for new public and recreational facilities. Throughout the whole General Plan elements all references to 5 aces per 1,000 needs to be revised to the current actual standard of 2.5 acres	No changes to this policy are recommended. The City Council has adopted 5 park acres per 1,000 as the current standard.
Circulation Element *CIRC 1.1, CIRC 1.2, 1.3* *Delete reference to "Complete Street??? The city has not provided an example of what a Complete street? It should have been included in this Element so that future landowners know what they are being required to do. These standards do not apply to private driveways and roads*	See response above regarding these comments. No changes are recommended.

Policy CIR 1.2 Complete Streets Construction: Complete City street ~~and private streets~~ to be constructed and maintained to the extent feasible *~~Policy CIR-1.3: Complete Streets in new development. Condition approvals of new development with street improvements and access provisions, to the extent feasible, that would be necessary to maintain multimodal operating standards and require complete street amenities consistent with the General Plan and accepted standards for new public and private streets~~*	
<u>Conservation Element</u> *Page 12 Revise the last paragraph* *Subsurface groundwater flows to the ocean are required to prevent seawater intrusion into the Basin. ~~Overdraft of the Santa Maria Groundwater Basin could lead to the reduction of available quality groundwater.~~ It could also reduce the natural subsurface flow towards the ocean, leading to an increased* *The courts have ruled that the SMV groundwater basin is not in overdraft and the TMA is responsible to reporting each year on the health of the basin. This information should have been detailed in this element.*	Recommend revising as follows: Subsurface groundwater flows to the ocean are required to prevent seawater intrusion into the Basin. ~~Overdraft of the Santa Maria Groundwater Basin could lead to the reduction of available quality groundwater. It could also reduce the natural subsurface flow towards the ocean, leading to an increased potential of saltwater intrusion on the western edge of the Basin.~~
Historic Review – The City needs to add an action item. Action ____ City will change the city ordinance so that historic value review may apply to buildings built before 1960 or earlier as the benchmark date instead of referring to 50 years old (1975)	Under the California Environmental Quality Act (CEQA), structures that are typically 50 years old or older are considered potential historical resources. While 50 years is the general threshold for evaluating significance, structures younger than 50 years can also be designated if they possess exceptional historical significance. No changes recommended.
~~Action COS-1.1.1: Prevent the loss of natural land area and/or the reduction of the quality of natural lands through the establishment of a no net loss land use management policy.~~ *~~• Site new development outside of sensitive habitat and wildlife corridor areas.~~* *~~• Prohibit redevelopment that would encroach upon sensitive habitat and wildlife corridor areas.~~*	Action COS 1.1.2 applies only to areas that are identified as sensitive habitat or a wildlife corridor area. It requires new development to be located outside of these areas. Future projects would be subject to the mitigation measures in the Final EIR for the General Plan (should the project use this document for CEQA), or other mitigation developed through a CEQA document specifically developed for that project. No changes are recommended.

Action COS-1.1.2: If impacts to natural resources are identified during environmental review, require the applicant to adjust site design and/or incorporate additional mitigation measures to minimize the identified impacts	See response above. No changes are recommended.
Delete these policies that state " Coordinate with the county …" and references to green belt. The city can not commit to a greenbelt around the city. *~~Policy COS-1.2: City greenbelt. Coordinate with Santa Barbara County to develop a continuous system of greenbelts and natural corridors.~~* *~~Action COS-1.2.1: Define the purpose and desired outcomes for a system of greenbelts and collaborate with Santa Barbara County to develop designation criteria and standards for the design, implementation, and use of greenbelt areas.~~* *~~Action COS-1.2.2: Assess existing land use patterns to designate areas that will comprise the City's greenbelt. Design the greenbelt to ensure connectivity to existing and planned parks, trails, and open spaces to facilitate wildlife movement~~* *~~Policy COS-2.1: Agricultural preservation. Collaborate with Santa Barbara County and local landowners to preserve existing agricultural uses on lands not proposed for future development, including croplands and rangelands.~~* *~~Action COS-2.1.1: During review of projects that would alter or convert existing agricultural uses, balance State and regional efforts to preserve existing agricultural uses, including the Santa Barbara County Right to Farm Ordinance, clustering of urban land uses/development, and transfer of development rights —with other factors. These include providing adequate housing, achieving a jobs-housing balance, supporting economic sustainability, and advancing other City interests.~~*	Recommend revising Policy COS 1.2 as follows: Policy COS-1.2: City greenbelt. ~~Coordinate with Santa Barbara County to~~ Develop a continuous system of greenbelts and natural corridors. No other changes are recommended.

Noise Element *Change out the Noise Element Figures to be correct* *Revise Action N-2.1.4: ~~Update~~ According to the City's Municipal Code to require new residential and mixed use development located above 75 dBA CNEL ~~within the 60 dBA CNEL~~ noise contours or higher of transportation corridors to submit an acoustical analysis and incorporate noise reduction strategies, such as vegetation buffers and physical sound barriers, as necessary to meet the requirements of the Noise Ordinance (Ord 12-7.14a)*	See response above regarding Action N-2.1.4. No changes are recommended. The Noise Element Figures were reviewed and no changes are recommended.
Health and Environmental Justice *~~Policy HEJ-8.6: Develop community benefits agreements. Facilitate the creation of community benefits agreements (CBAs) for major private development projects to provide resources and mitigate pollution impacts for the benefit of local communities, especially when located in a DAC.~~* *~~Action HEJ-8.6.1: Identify potential community benefits, including:~~* *~~• Lower levels of environmental pollution~~* *~~• Reduced car and truck traffic~~* *~~More affordable housing units~~* *~~• Workforce development opportunities~~* *~~• Tree and native species planting~~* *~~• Shade structures for extreme heat events~~* *~~• Green (e.g., trees) or gray (e.g. sound walls) barriers for noise and pollution mitigation~~* *~~• Community gardens and publicly accessible green space~~* *~~Other investments as suggested by Santa Maria community members.~~*	This policy and action is included in the General Plan to provide the City Council with the opportunity to develop this type of program in the future should they elect to do so. No changes to this Policy and Action are recommended.
Public Facilities and Services Element *Goals PFS-6 Policy PFS -1 and Policy PFS 6.5* *They should all be deleted or revised to state that currently these buildings are locked down, fenced off or under surveillance and only available to the public in limited manner. School site are not open to the public.*	See response above. No changes are recommended.

<u>Recreation and Parks Element</u> *Park quality and capacity. Population growth over the last 25 to 30 years has contributed to overcrowding at many parks, (Why did the city Parks allow this to happen?) and this trend is expected to continue unless new parkland is added or existing facilities are expanded. To meet the City's park service goal today would require over 270 acres of new parkland above the current 250 acres ??? and over 440 acres by 2050. In addition to park expansion, it will be important to optimize underutilized portions of existing parks and to incorporate new parks into future Specific Plans.* *The city policy of 5 acres per 1,000 in unattainable and the city could not afford to maintain that much land. Current there is 230 acres and the city cannot afford to take on more than 2.5 acres per 1,000.* *PC needs to recommend to the city council this new policy of 2.5 acres per 1,000*	See response above. No changes are recommended.
Letter 5: Dignity Health Marian Regional Medical Center, February 17, 2026	
Dignity Health requests the City to designate 60 acres of the Planned Annexation (PA) bordered by Main Street and Suey Road for Community Facilities (CF) development with a specific medical facility overlay. The potential future uses for this land include but are limited to the development of health sciences education campus, a behavioral health hospital and supportive services, advanced imaging and diagnostic services, ambulatory surgical center, skilled, convalescent and assisted living facilities, ancillary retail services and a comprehensive medical offices complex. The designation of land, close to the hub of existing medical services will streamline future development and accelerate the timeframe for future services. It will prioritize healthcare for the community and allow for planning for needed housing and retail development in the remaining Planned Annexation. The identified location will create a cohesive healthcare market that will create convenience for patients, efficiencies for healthcare providers and unity for the community.	This item can be reviewed in coordination with Marian Regional Medical Center following adoption of the General Plan and direction from the City Council to initiate the LAFCO application process for SOI amendments and annexation. This process would include pre-zoning the 985-acre Planned Annexation area where the requested acreage for future medical uses can be considered. This letter is noted as being a part of the record for the General Plan Update. No changes are recommended.

COUNCIL AGENDA REPORT

TO: Mayor and City Council

FROM: Director of Utilities Shad S. Springer, P.E., MPA

DATE: **May 5, 2026**

SUBJECT: **Ordinance Approving Solid Waste Collection Rates Commencing each July 1 from 2026 through 2029**

Description:
The City Council will introduce an ordinance updating solid waste collection rates commencing each July 1 from 2026 through 2029.

Environmental Notice: The activity is not a "Project" as defined under Section 15378 of the California Environmental Quality Act State Guidelines; therefore, pursuant to State Guidelines Section 15060(c)(3) no environmental review is required.

RECOMMENDATION:

The City Council to:

1. Conduct a public hearing;
2. Receive a presentation regarding solid waste collection rates;
3. Determine whether a majority protest exists;
4. Waive first reading and introduce an Ordinance approving solid waste collection rates commencing each July 1 from 2026 through 2029; and
5. Set for adoption at the next regular City Council meeting.

SUMMARY:

The Utilities Department recommends adjusting solid waste collection rates to address increasing operating and capital costs. The proposed rates would take effect annually each July from 2026 through 2029. The most recent rate adjustment occurred in July 2025.

The rate-setting process followed established cost-of-service methodologies and all legal requirements of Proposition 218 ("Prop 218"). Under Prop 218, rate changes are subject to a written majority protest. For this proceeding, 10,293 written protests are required to constitute a majority protest.

Key drivers of the proposed rate adjustments include inflationary increases in labor, fuel, and materials; vehicle replacement needs; organics collection requirements under Senate Bill (SB) 1383; and ongoing regulatory compliance obligations.

BACKGROUND:

Cost of Service Study. The City initiated an update to its comprehensive cost of service study for the Solid Waste Collection Enterprise Fund. The study was conducted by HDR Consultants, Inc. (HDR). Spanning from July 2024 through December 2025, the study evaluated the City's short- and long-term financial needs, assessed revenue sufficiency, and identified equitable, cost-based rates for all solid waste customers. HDR's report, filed with the Utilities Department, provides the basis for the proposed rates.

Public Workshop. A Public Workshop was held on March 18, 2026, at Shepard Hall to present the rate-setting process, answer questions, and receive public input (Attachment B). The workshop was advertised in the Prop 218 Notification, through a City news release, and via a Santa Maria Times advertisement published February 25, 2026 (Attachment C). Two residents attended.

Public Hearing and Majority Protest. Proposed rates are subject to a written majority protest (50 percent plus one). If 10,292 of the City's 20,583 solid waste customers submit written protests before the close of the Public Hearing, the rates cannot be adopted. As of March 31, 2026, the City Clerk's Office received four written protests.

Legal Requirements. Article XIII D, Section 6(a) of the California Constitution (known as Prop 218) governs fees for property-related services, including refuse collection. Prop 218 requires that fees do not exceed the proportional cost of providing service to each parcel and that revenues be used solely for the service for which they are collected. Prop 218 also requires that notice be mailed to all affected customers at least 45 days before the Public Hearing. The notice must include the proposed rates, the basis for calculation, the reasons for the changes, and the date, time, and location of the Public Hearing.

The Utilities Department mailed bilingual (English and Spanish) notices as utility bill inserts during January and February 2026 (Attachment D).

Historical Rate Adjustments. Solid waste collection rates were not adjusted for ten years prior to 2011. The City adopted three-year rate schedules in 2011 (effective 2012–2014) and again in 2014 (effective 2015-2017). In 2021, the City adopted a four-year schedule effective January 1, 2022, and each July thereafter through July 1, 2025.

DISCUSSION

The Utilities Department provides mandatory solid waste collection services to all residents and businesses, including trash, recycling, and organics collection. Organics collection continues to expand in response to State mandates such as Assembly Bill (AB) 341, AB 1826, and SB 1383. The department is committed to delivering safe, efficient, and cost-effective services while maintaining the resources necessary to meet regulatory requirements and operational needs. Staff conducts ongoing financial analyses using a solid waste rate proforma grounded in industry-recognized rate-setting principles. The proforma evaluates current and projected costs to ensure long-term financial sustainability of the City's Solid Waste Collection Enterprise Fund.

The solid waste program incurs costs to:

- Comply with State and Federal regulatory mandates, including AB 341, AB 1826, and SB 1383, which expand recycling and organics collection requirements and increase reporting and contamination-monitoring obligations.
- Fund renewal and replacement of capital assets, particularly aging collection vehicles and equipment that require scheduled replacement to maintain service reliability.
- Cover operating and maintenance expenses, including rising costs for labor, fuel, vehicle maintenance, parts, carts, and other operational materials.
- Pay landfill tipping and processing fees, which increase due to recycling market conditions and regulatory requirements.
- Fund annual franchise fees to the City's General Fund, consistent with established City policy.

In addition to these general cost drivers, several significant cost increases are impacting the Solid Waste Collection Enterprise Fund, including:

- Future fleet electrification and charging infrastructure: approximately $11.5 million
- Organics processing costs: approximately $710,000
- Mixed recycling processing costs: approximately $180,000
- Fleet operating and maintenance costs: approximately $500,000 (16% above fiscal year 2025-26)
- General liability insurance: increase of approximately $260,000 (70% above historical average)

These cost pressures contribute to the need to update rates to maintain service reliability, regulatory compliance, and long-term financial sustainability.

Alternatives

The City Council may:

(1) Elect not to approve the recommended rates. This will result in insufficient funding for the Solid Waste Collection Enterprise Fund, requiring the City to identify another funding source, such as the General Fund. In addition to creating a funding shortfall, not approving the rates will likely result in deferred vehicle replacements, increased maintenance costs, and challenges in meeting State-mandated organics collection and reporting requirements.

(2) Direct Staff to evaluate alternative rates and return to City Council for consideration. Any alternative must comply with cost-of-service principles and Prop 218 requirements. Developing alternatives will require additional time and expense, and because they will rely on the same underlying data, they will not materially differ from the proposed rates. Delaying adoption will result in higher future rates.

Staff recommends approving the rates as presented in the Prop 218 Notice. The proposed rates are cost-based, equitable, legally compliant, and necessary to maintain the financial stability of the Solid Waste Collection Enterprise Fund. Even with the proposed adjustments, the City's rates will remain substantially lower than those of surrounding jurisdictions (Attachment E).

Fiscal Considerations

The recommended rates are designed to recover the full cost of providing solid waste collection services and to proportionately allocate those costs among ratepayers. Adoption of the proposed rates will help ensure the solvency of the Solid Waste Collection Enterprise Fund, support ongoing operations and maintenance, and provide resources for equipment repair and replacement while maintaining a positive cash balance.

Impact on Community

State law prohibits the City from charging more than the cost of providing service. As a result, the City cannot subsidize solid waste rates unless external funding is secured to offset costs. Staff recognizes that any rate increase may impact household budgets; however, State law mandates the City may only recover the full cost of providing service, and the proposed rates reflect only those necessary costs.

ORDINANCE NO.

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF SANTA MARIA, CALIFORNIA APPROVING SOLID WASTE COLLECTION RATES COMMENCING EACH JULY 1 FROM 2026 THROUGH 2029

WHEREAS, the City of Santa Maria Utilities Department provides mandatory solid waste collection services to all residential and commercial customers; and

WHEREAS, the Utilities Department completed an update to its cost-of-service analysis to evaluate revenue needs and establish equitable, cost-based rates for solid waste collection services; and

WHEREAS, the analysis identified increasing operating, capital, regulatory, and processing costs, including inflationary pressures, vehicle replacement needs, organics and recycling requirements, and compliance obligations under State laws such as Assembly Bill (AB) 341, AB 1826, and Senate Bill 1383; and

WHEREAS, the Utilities Department determined that updated solid waste collection rates are necessary to ensure continued service reliability, financial sustainability, and compliance with State mandates; and

WHEREAS, proposed rates were included in the Proposition 218 Notice mailed to all affected customers in accordance with Article XIII D of the California Constitution, which establishes procedural and substantive requirements for property-related fees; and

WHEREAS, the City held a Public Workshop and scheduled a Public Hearing to receive public input and accept written protests, and fewer than a majority of affected property owners submitted written protests; and

WHEREAS, the City Council finds that the proposed rates do not exceed the proportional cost of providing solid waste collection services and that revenues derived from the rates will be used solely for that purpose; and

WHEREAS, the City has complied with the noticing, public hearing, and majority-protest provisions of Proposition 218 related to the proposed rates.

NOW, THEREFORE, IT IS HEREBY ORDAINED by the City Council of the City of Santa Maria, State of California, as follows:

SECTION 1. As of July 1, 2026, July 1, 2027, July 1, 2028, and July 1, 2029, solid waste collection rates shall be updated as described in the *Proposition 218 Notice of Public Hearing: Proposed Rate Adjustments to Solid Waste Collection Rates Commencing July 1, 2026* incorporated herein by reference and on file with the City Clerk's Office.

SECTION 2. This Ordinance shall be in full force and effect 30 days after its passage. Within 15 days following its passage, the Chief Deputy City Clerk shall cause this Ordinance to be published in a newspaper of general circulation in accordance with State Law; or when deemed necessary due to the length or complexity of the Ordinance, cause a summary of the Ordinance to be prepared and published at least five days prior to the City Council meeting at which the proposed Ordinance is to be adopted. If a summary is published at least five days prior to the City Council meeting at which the proposed Ordinance is to be adopted, then within 15 days after adoption of the Ordinance the Chief Deputy City Clerk shall publish a summary of the Ordinance with the names of those City Council Members voting for and against the Ordinance and shall post a certified copy of the full text of such adopted Ordinance along with the names of those City Council Members voting for and against the Ordinance.

SECTION 3. The Chief Deputy City Clerk is hereby authorized to make minor changes herein to address clerical errors, so long as substantial conformance of the intent of this document is maintained. In doing so, the Chief Deputy City Clerk shall consult with the City Manager and City Attorney concerning any changes deemed necessary.

Public Workshop
3/18/2026, 5:30 PM to 6:20 PM
Shepard Hall, Santa Maria Public Library
QUESTIONS & ANSWERS

Residents in Attendance: 2 – refer to sign in sheet

City Staff in Attendance: Springer, Fishman, Baker, Alvarado, Ruiz, Torres-Sanchez (bilingual interpreter)

Workshop started at 5:30 PM.

1. Resident Question: How does the City's population relate to the number of customer accounts shown on the slide?

   Utilities Response: Each customer account represents one address for service. For example, a single-family residential property with one Trash cart is one customer account. Likewise, a multi-family apartment complex with a dozen dumpsters still only counts as one customer account.

2. Resident Question: Does the State give the City funding for fleet electrification?

   Utilities Response: No; the City views the State's electrification requirement as an unfunded mandate. Concerningly, the Utilities Department piloted an electric truck in the last two years and learned that a single truck cannot complete a full route, which means the City must double its fleet to run the same routes. The City will wait to make this investment until it can no longer be delayed. The intention is to purchase the vehicles at the last available chance to be the most cost-effective for the community.

3. Resident Question: Regarding fleet electrification, are there any real estimates for the cost of power and maintenance for the charging infrastructure?

   Utilities Response: This is difficult to predict. In the assumptions for this rate-setting period, operation and maintenance expenses are being maintained at current levels, but the expense of the charging infrastructure alone is currently estimated at about $3.5-million. The estimates are made in coordination with the City Public Works Department Fleet Division based on best-known information.

4. Resident Question: Where does the green waste go?

   Utilities Response: Engel & Gray Composting Facility on Ray Road, where it is composted and repurposed.

Workshop ended at 6:20 PM.

Voters

From A1

highest civilian honor, to the hockey team's goaltender, Connor Hellebuyck. Trump made a similar surprise announcement in 2020, bestowing the award on conservative radio host Rush Limbaugh during the speech.

Trump offered relatively few new policy ideas early in his address, but non-etheless vowed of the nation, "It is indeed a turnaround for the ages."

Trump championed his immigration crackdown and slashing of the federal government, as well as his push to preserve widespread tariffs that the Supreme Court just struck down and his ability to direct quick-hit military actions around the world, including in Iran and Venezuela.

The president also plans to announce that tech companies involved in artificial intelligence are agreeing to pay higher electricity rates in areas where their data centers are located, according to a White House official who insisted on anonymity to discuss the speech.

Data centers tend to use large volumes of electricity, potentially increasing the cost of power to other consumers in the area.

Trump decried the Supreme Court rejecting his signature tariff policies, calling it "an unfortunate ruling" And he talked about his attempts to maneuver around that decision without depending on Congress or spooking financial markets.

"We're saving our country," Trump said of tariffs, adding that they were "peace-producing."

The Supreme Court justices in attendance were the same who came to Trump's address to a joint session of Congress last March: Chief Justice John Roberts, as well as Justices Brett Kavanaugh, Amy Coney Barrett and Elena Kagan.

Trump greeted the justices and even shook hands before his speech began with Coney Barrett, after previously slamming her for siding with the majority against Trump's tariffs — days he him appointing her to the high court in his first term.

Before Trump's speech, Senate Democrats blocked a bill to restore funding to the Department of Homeland Security, pressing for new limits on immigration enforcement that Republicans have opposed.

"Tonight, I am demanding the full and immediate restoration of all funding for the Border Security and Homeland Security of the United States," Trump said in his address, according to the excerpts.

Michael Waldman, Clinton's former chief speechwriter, said second-term presidents "have a tough job because what they all want to say is, 'Hey, look what a great job I've been doing — why don't you love me?'"

Affordability questions loom large

No matter what his prepared remarks say, Trump relishes deviating into personal grievances.

His lacerations against discipline has been on display after numerous shots fired at the costs of living helped propel Democratic wins across the country on Election Day last November. The White House subsequently recruited how U.S. airstrikes last summer pounded Tehran's nuclear capabilities, and land the said that ousted Venezuelan president Nicolas Maduro Moros, as well as his administration's brokering of a ceasefire in Israel's war with Hamas in Gaza.

But he also strained U.S. military alliances with NATO, thanks to his push to seize Greenland from Denmark and his failure to take a harder line with Russian President Vladimir Putin in seeking an end to its war in Ukraine. Tuesday was the fourth anniversary of the Russia-Ukraine war.

Such gains don't feel tangible to those without stock portfolios, however. There also are persistent fears that tariffs stoked higher prices, which could eventually hurt the economy and job creation. Economic growth slowed in the last three months of last year.

It's potentially politically perilous in the end of November elections that could deliver congressional wins to Democrats, just as 2026's blue wave created a strong check to his administration during his first term.

Democrats' response to Trump's speech will be delivered by Virginia Gov. Abigail Spanberger, whose affordability-focused musings helped her flip a Republican -held office in November. Several congressional Democrats, meanwhile, skipped Trump's speech in protest.

Foreign policy in focus

Trump's address comes as two U.S. aircraft carriers have been dispatched to the Middle East amid tensions with Iran.

The president has repeatedly accused how U.S. airstrikes last summer pounded Tehran's nuclear capabilities, and land the said that ousted Venezuelan President Nicolas Nicolás Maduro, as well as his administration's brokering of a ceasefire in Israel's war with Hamas in Gaza.

But he also strained U.S. military alliances with NATO, thanks to his push to seize Greenland from Denmark and his failure to take a harder line with Russian President Vladimir Putin in seeking an end to its war in Ukraine. Tuesday was the fourth anniversary of the Russia-Ukraine war.

MATT ROURKE

President Donald Trump delivers the state of the union address in a joint session of congress in the house chamber at the U.S. Capitol in Washington Tuesday.

Vaccine

From A1

The CDC and Department of Health and Human Services did not respond to requests for comment on the lawsuit.

The lawsuit escalates an ongoing battle between Democratic-led states and Republican President Donald Trump's administration over the federal government's changes to public health policy under Health Secretary Robert F. Kennedy Jr. The Trump administration has laid off thousands of workers at federal public health agencies, cut funding for scientific research and altered government guidance on flu shots and other topics.

Kennedy last year ousted every member of a vaccine advisory committee and replaced them with his own picks, which Tuesday's complaint alleges was unlawful.

The lawsuit comes months after the Democratic governors of California, Washington state and Oregon launched an alliance to establish their own vaccine recommendations. The governors said the Trump administration was risking people's health by politicizing the CDC.

States, not the federal government, have the authority to require vaccinations for schoolchildren, though the CDC's recommendations typically influence state regulations.

County

From A1

Filling the board of directors, the chamber appointed Dave Jaskolski, Dana Dreffs, Zack Pohlman and Yvette Cope.

Jaskolski, a Lompoc resident since 1982, is a longtime Central Coast restaurateur and insurance professional. He operated The Timbers Restaurant in Goleta from 1987 to 2004 and later owned a Farmers Insurance agency in Carpinteria. He is the proprietor and chief of Dave's Place and owner of Jaxx Pizza and Subs, which is expected to open soon.

Dreffs is an aerospace engineer with more than 30 years of experience in space and defense programs. His career has included work on the International Space Station, Delta II launch systems and the C-17 aircraft program. He currently serves as director of West Coast launch Rita Operations for Firefly Aerospace at Vandenberg, overseeing launch readiness and site operations.

Pohlman, a Lompoc native, is a program operations leader at United Launch Alliance, and has more than a decade of experience supporting launch operations at Vandenberg.

Cope is chief executive officer of Lompoc Valley Medical Center. She joined the hospital in 2010 and previously served as chief nursing officer and chief operating officer.

Spencer's Fresh Markets seeks to open 'H' Steet location

Spencer's Fresh Markets is poised to open a new grocery location in Lompoc, according to a store representative Monday who confirmed the news and followed with "We're excited!"

A public notice posted at the vacant Big Lots building (1009 N. H St., Suite M-), in the shopping center next to the Goodwill store and Planet Fitness.

The notice, issued by the California Department of Alcoholic Beverage Control, shows that Nova Scotia Financial Group Inc. has applied for a Type 21 off-sale general license for the business, which allows the sale of beer, wine and distilled spirits for consumption off the premises. The filing indicates a premises-to-premises and person-to-person transfer of the license.

Fleming Manager Greg Stonesalso confirmed that there is ongoing communication between with Spencer "but the city awaits receipt of the tenant improvement plan to review.

"At this point I do not have a timeline," Stones said.

Spencer's Fresh Markets in Ojai is owned by the same company, according to public record.

The public notice states that any verified protest must be submitted in writing to the Department of Alcoholic Beverage Control within 30 days of the Feb. 19 posting date.

PROPOSITION 218 NOTICE OF PUBLIC HEARING: PROPOSED RATE ADJUSTMENTS TO SOLID WASTE COLLECTION RATES COMMENCING JULY 1, 2026

Language Assistance: Oral interpretation is available upon request. Please contact City staff for assistance.

THE CITY OF SANTA MARIA WILL CONDUCT A PUBLIC HEARING TO CONSIDER PROPOSED SOLID WASTE COLLECTION RATES OVER THE NEXT FOUR YEARS, BEGINNING JULY 1, 2026. Proposed rates are necessary to meet revenue requirements for regulatory compliance, operation, maintenance, repair, and replacement costs of the City's municipal solid waste collection program. More information regarding the proposed rates is contained in this notice, which is also available online at https://www.cityofsantamaria.org/services/departments/utilities-department. Questions may be directed to the Utilities Department at (805) 925-0951 ext. 7270. The public is invited to attend a Public Workshop on the proposed rates on March 18, 2026 at 5:30 p.m. in Shepard Hall at the Public Library, at 421 South McClelland Street, Santa Maria, California. **THE PROPOSED RATES WILL BE CONSIDERED BY THE SANTA MARIA CITY COUNCIL AT A PUBLIC HEARING ON MAY 5, 2026 AT 5:30 P.M. IN CITY COUNCIL CHAMBERS AT 110 EAST COOK STREET, SANTA MARIA, CALIFORNIA.**

SOLID WASTE COLLECTION PROGRAM

The City of Santa Maria provides mandatory solid waste collection services. The City also provides required recycling collection services and organics collection services, which continue to expand based on mandates implemented and enforced by the State of California, including Assembly Bill 341, Assembly Bill 1826, and Senate Bill 1383. The City is committed to providing safe and efficient collection services at the lowest possible costs while maintaining the resources to effectively facilitate such collection and disposal.

More than 19,000 accounts receive weekly trash collection services with carts, either 65- or 95-gallons. Minimum services for cart customers include one trash cart, one equivalent-sized blue recycling cart, and one equivalent-sized green organics cart. Trash and organics are serviced weekly with recycling service occurring every other week.

More than 1,500 accounts receive variable trash collection services with bins ranging in size from 2-cubic yards to 6-cubic yards. Minimum services for bin customers include one trash bin, one equivalent-sized blue recycling bin, and the minimum quantity of green organics carts required under State regulations. Trash is serviced 1 to 6 times per week, recycling is serviced 1 to 5 times per week, and organics is serviced 1 to 2 times per week.

BASIS FOR PROPOSED RATES AND REASON FOR RATE ADJUSTMENTS

Solid waste collection rates are determined for each parcel based on several factors, including the type of service provided, the frequency of pickups per week, the size of the container serving the parcel, and the number of containers serving the parcel, as described in more detail below.

To operate its solid waste collection program, the City incurs costs to meet all State regulatory requirements; fund renewal and replacement capital; fund operating and maintenance expenses for the collections fleet, inventory, tools, and personnel. Proposed rates reflect increasing costs incurred by the City for regulatory compliance, operation, maintenance, repair, and replacement of the City's municipal solid waste collection program, and the City must adjust the rates accordingly to recover the costs of providing solid waste services.

The cost-based rates proportionately allocate costs among ratepayers and will help to ensure the solvency of the Solid Waste Collections Enterprise Fund to operate the City's solid waste collection program.

HOW TO SUBMIT A WRITTEN PROTEST

Written protests to proposed rates may be submitted by a property owner or tenant directly responsible for payment of solid waste collection services. Only one protest per identified parcel will be counted. Written protests to proposed rates must be delivered in person or by mail prior to the conclusion of the Public Hearing on May 5, 2026 to the City of Santa Maria, Attn: Chief Deputy City Clerk, 110 East Cook Street, Santa Maria, CA 93454. Written protests may also be hand delivered during the Public Hearing, provided they are submitted to the City Clerk prior to the conclusion of the Public Hearing. Protests submitted electronically will not be accepted as written protests. Regardless of mailing date, all written protests must be received by the Chief Deputy City Clerk prior to the conclusion of the Public Hearing in order to be accepted.

Written protests must: (1) State that the identified property owner or tenant is opposed to the solid waste collections rates; (2) Provide the location of the identified parcel (by street address, assessor's parcel number, or utility account number); and (3) Include the name and signature of the property owner or tenant submitting the protest.

The City Council will hear and consider all written protests and oral comments about the proposed rates at the Public Hearing. Oral comments will not qualify as valid written protests unless accompanied by a written protest. Upon the conclusion of the Public Hearing, the City Council will consider adoption of the proposed rates as described in this notice.

If a majority of affected property owners submit written protests, the proposed rate changes cannot be adopted. If written protests to the proposed rates are not presented by a majority of the property owners or tenants of the identified parcels subject to the proposed rates, the City Council will be authorized to adopt the rates as proposed.

UNDERSTANDING PROPOSED RATES

Proposed rates are shown on Page 3 and are organized by the effective date, the container type (cart or bin) and size, quantity of trash containers, and frequency of pickup.

Each customer's base monthly rate includes one set of containers serviced once per week. Any additional containers or additional pickup days increase the monthly rate. (*Additional pickup days are per bin and only available for bin accounts.)

***Formula to calculate monthly rate**:*

	Monthly Rate (Based on Bin Size)
+	Additional Trash Bin
+	*Additional Day (Per Bin)
=	New Monthly Rate

***Example**: Effective July 1, 2026, the monthly rate for two 2-Yard Bins serviced two times per week would be:*

	$166.72	1st Bin
+	164.49	2nd Bin
+	168.05	2nd Pickup - 1st Bin
+	168.05	2nd Pickup - 2nd Bin
=	$667.31	Per Month

If approved, the proposed rates will take effect July 1, 2026, and increase annually on July 1, 2027, July 1, 2028, and July 1, 2029. Implementing the rate adjustments over several years provides predictable changes for customers and aligns revenue with service needs.

CURRENT AND PROPOSED RATES

Service Type / Current Monthly Rate	Proposed Monthly Rate				
	FY 2025-26	FY 2026-27	FY 2027-28	FY 2028-29	FY 2029-30
65 Gallon Cart	40.75	40.75	44.97	49.24	53.92

AVISO DE AUDIENCIA PÚBLICA DE LA PROPUESTA 218: AJUSTES PROPUESTOS A LAS TARIFAS DE RECOLECCIÓN DE RESIDUOS SÓLIDOS A PARTIR DEL 1 DE JULIO DE 2026

Asistencia Lingüística: La interpretación oral está disponible a solicitud. Por favor, comuníquese con el personal de la Ciudad para recibir asistencia.

LA CIUDAD DE SANTA MARÍA LLEVARÁ A CABO UNA AUDIENCIA PÚBLICA PARA CONSIDERAR LAS TARIFAS PROPUESTAS PARA LA RECOLECCIÓN DE RESIDUOS SÓLIDOS DURANTE LOS PRÓXIMOS CUATRO AÑOS, A PARTIR DEL 1 DE JULIO DE 2026. Las tarifas propuestas son necesarias para cubrir los requisitos de ingresos relacionados con el cumplimiento normativo, la operación, el mantenimiento, las reparaciones y los costos de reemplazo del programa municipal de recolección de residuos sólidos. Para más información sobre las tarifas propuestas, consulte este aviso, que también está disponible en línea en https://www.cityofsantamaria.org/services/departments/utilities-department. Las preguntas pueden dirigirse al Departamento de Servicios Públicos al (805) 925-0951 ext. 7270. Se invita al público a asistir a un Taller Público sobre las tarifas propuestas el 18 de marzo de 2026 a las 17:30 h en el Shepard Hall de la Biblioteca Pública, ubicado en 421 South McClelland Street, Santa María, California. **LAS TARIFAS PROPUESTAS SERÁN CONSIDERADAS POR EL CONCEJO MUNICIPAL DE SANTA MARÍA EN UNA AUDIENCIA PÚBLICA EL 5 DE MAYO DE 2026 A LAS 5:30 P.M. EN LAS SALAS DEL CONCEJO MUNICIPAL EN 110 EAST COOK STREET, SANTA MARÍA, CALIFORNIA.**

PROGRAMA DE RECOLECCIÓN DE RESIDUOS SÓLIDOS

La Ciudad de Santa María ofrece servicios obligatorios de recolección de residuos sólidos. La Ciudad también ofrece los servicios obligatorios de recolección de reciclaje y de residuos orgánicos, que continúan expandiéndose según las disposiciones implementadas y aplicadas por el Estado de California, incluyendo los Proyectos de Ley 341, 1826 y 1383 del Senado. La Ciudad se compromete a brindar servicios de recolección seguros y eficientes al menor costo posible, manteniendo los recursos necesarios para facilitar dicha recolección y disposición.

Más de 19,000 cuentas reciben servicios semanales de recolección de basura con carritos de 65 o 95 galones. Los servicios mínimos para los clientes de carritos incluyen un carrito de basura, un carrito de reciclaje azul de tamaño equivalente y un carrito verde de residuos orgánicos de tamaño equivalente. La recolección de basura y residuos orgánicos se realiza semanalmente, y el servicio de reciclaje se realiza cada dos semanas.

Más de 1,500 cuentas reciben servicios de recolección de basura con contenedores de diferentes tamaños, desde 2 hasta 6 yardas cúbicas. Los servicios mínimos para los clientes de contenedores incluyen un contenedor de basura, un contenedor azul de reciclaje de tamaño equivalente y la cantidad mínima de contenedores verdes para residuos orgánicos exigidos por la normativa estatal. El servicio de basura se realiza de 1 a 6 veces por semana, el de reciclaje de 1 a 5 veces por semana y el de residuos orgánicos de 1 a 2 veces por semana.

BASE DE LAS TARIFAS PROPUESTAS Y MOTIVO DE LOS AJUSTES DE TARIFAS

Las tarifas de recolección de residuos sólidos se determinan para cada parcela en función de diversos factores, como el tipo de servicio prestado, la frecuencia semanal de las recogidas, el tamaño del contenedor que atiende la parcela y la cantidad de contenedores que la atienden, como se describe con más detalle a continuación.

Para operar su programa de recolección de residuos sólidos, la Ciudad incurre en costos para cumplir con todos los requisitos reglamentarios estatales; financiar capital de renovación y reemplazo; y financiar los gastos de operación y mantenimiento de la flota de recolección, el inventario, las herramientas y el personal. Las tarifas propuestas reflejan el aumento de los costos incurridos por la Ciudad para el cumplimiento normativo, la operación, el mantenimiento, la reparación y el reemplazo del programa municipal de recolección de residuos sólidos, y la Ciudad debe ajustar las tarifas en consecuencia para recuperar los costos de la prestación de los servicios de recolección de residuos sólidos.

Las tarifas basadas en costos distribuyen los costos proporcionalmente entre los contribuyentes y ayudarán a garantizar la solvencia del Fondo Empresarial de Recolección de Residuos Sólidos para operar el programa de recolección de residuos sólidos de la Ciudad.

CÓMO PRESENTAR UNA PROTESTA POR ESCRITO

Las protestas escritas contra las tarifas propuestas pueden ser presentadas por un propietario o un inquilino directamente responsable del pago de los servicios de recolección de residuos sólidos. Solo se contará una protesta por cada parcela identificada. Las protestas escritas contra las tarifas propuestas deben entregarse en persona o por correo antes de la conclusión de la Audiencia Pública el 5 de mayo de 2026 a la Ciudad de Santa Maria, Attn: Subsecretario jefe de la ciudad, 110 East Cook Street, Santa Maria, CA 93454. Las protestas escritas también pueden entregarse en mano durante la Audiencia Pública, siempre que se presenten ante el Subsecretario jefe de la ciudad antes de la conclusión de la Audiencia Pública. Las protestas enviadas electrónicamente no serán aceptadas como protestas escritas. Independientemente de la fecha de envío, todas las protestas escritas deben ser recibidas por el Subsecretario jefe de la ciudad antes de la conclusión de la Audiencia Pública para ser aceptadas.

Las protestas escritas deben: (1) Declarar que el propietario o inquilino identificado se opone a las tarifas de recolección de residuos sólidos; (2) Proporcionar la ubicación de la parcela identificada (mediante dirección, número de parcela catastral o número de cuenta de servicios públicos); y (3) Incluir el nombre y la firma del propietario o inquilino que presenta la protesta.

El Concejo Municipal escuchará y considerará todas las protestas escritas y los comentarios orales sobre las tarifas propuestas en la Audiencia Pública. Los comentarios orales no calificarán como protestas escritas válidas a menos que estén acompañados de una protesta escrita. Al concluir la Audiencia Pública, el Concejo Municipal considerará la adopción de las tarifas propuestas según se describe en este aviso.

Si una mayoría de los propietarios afectados presenta protestas escritas, los cambios de tarifas propuestos no podrán ser adoptados. Si no se presentan protestas escritas a las tarifas propuestas por parte de la mayoría de los propietarios o inquilinos de las parcelas identificadas sujetas a las tarifas propuestas, el Concejo Municipal estará autorizado para adoptar las tarifas según lo propuesto.

COMPRENDER LAS TARIFAS PROPUESTAS

Las tarifas propuestas se muestran en la página 3 y están organizadas por fecha de entrada en vigor, tipo de contenedor (carrito o cubo) y tamaño, cantidad de contenedores y frecuencia de recogida.

La tarifa mensual base de cada cliente incluye un juego de contenedores con servicio una vez por semana. Cualquier contenedor o día de recogida adicional aumenta la tarifa mensual. (*Los días de recogida adicionales son por contenedor y solo están disponibles para cuentas con contenedores).

Fórmula para calcular la tarifa mensual:

	Tarifa mensual (según el tamaño del contenedor)
+	Contenedor adicional
+	*Día adicional (por contenedor)
=	Nueva tarifa mensual

***Ejemplo**: A partir del 1 de julio de 2026, la tarifa mensual para dos contenedores de 2 yardas con servicio dos veces por semana sería:*

	$166.72	Primer contenedor
+	164.49	Segundo contenedor
+	168.05	Segunda recogida - Primer contenedor
+	168.05	Segunda recogida - Segundo contenedor
=	$667.31	Por mes

De aprobarse, las tarifas propuestas entrarán en vigor el 1 de julio de 2026 y aumentarán anualmente los días 1 de julio de 2027, 1 de julio de 2028 y 1 de julio de 2029. Implementar los ajustes de tarifas a lo largo de varios años proporciona cambios predecibles para los clientes y alinea los ingresos con las necesidades de servicio.

COUNCIL AGENDA REPORT

TO: Mayor and City Council

FROM: Dennis Smitherman, Interim Director of Recreation and Parks

DATE: May 5, 2026

SUBJECT: **Adoption of a Resolution Declaring its Intent to Levy and Collect the 2026 – 2027 Landscape Assessments and Approval of the Engineer's Reports**

Description:
The City Council will consider adoption of the engineers reports and the intent to levy and collect the 2026-27 landscape district assessments.

RECOMMENDATION:

1. Approving the Engineer's Reports for the 2026-2027 landscape maintenance districts and special benefit zones assessment proceedings; and
2. Adopt a Resolution declaring its intent to levy and collect assessments and setting a time and place for a public hearing thereon for the four landscape maintenance districts and the 20 Special Benefit Zones.

BACKGROUND:

During the 1980's, the City of Santa Maria established four geographic Landscape Maintenance Districts with Broadway and Stowell serving as the center point. The four "Master Districts" consist of the following: the South Miller Street/South College Drive Landscape Maintenance District created with Resolution 81-298 on August 4, 1981; the Northwest Landscape Maintenance District with Resolution 88-154 on December 20, 1988; the Northeast Landscape Maintenance District with Resolution 89-51 on May 2, 1989; and, the Southwest Landscape Maintenance District with Resolution 89-50 on May 2, 1989. The creation of these districts enables the City of Santa Maria to levy and collect assessments for the purposes of maintaining the public landscaping and parks, and for nuisance abatement within each district.

Within the four "Master Districts," there are currently 18 Special Benefit Zones (SBZ). Each SBZ was created at the time when a new development was built, in order to provide for the perpetual maintenance of additional public improvements associated with the development of each project. These public improvements include retention basins, parks, sidewalks, graffiti abatement, pest abatement, street trees, and all public thoroughfare landscaping. The cost for maintaining the public improvements vary, based on the type and extent of public improvements in a given subdivision. This cost is distributed among all assessed properties within the specific SBZ and collected annually through property taxes.

Under the Landscaping and Lighting Act of 1972 ("the Act"), the City is authorized to provide and maintain landscaping, public lighting, appurtenant facilities, park and recreational improvements. By following the procedures set out in the Act, as well as Proposition 218 and its implementing legislation, the City can assess property owners for the special benefit received as a result of installing and maintaining these improvements.

The process of assessing property for improvements under the Act has several steps. A typical first step is annexing property into a particular part of the City's system under the Act, and setting of the assessment for the first fiscal year. This is accomplished through consent of the current property owners and action of the Council pursuant to an Engineer's Report. The Engineer's Report correctly apportions the costs to specific property according to the special benefit received. If particular properties receive additional benefit, they are placed into a "zone" which receives a particularized assessment amount according the additional special benefit received.

Assessment law, in particular Proposition 218, allows only the *special* benefit received by properties to be assessed. General benefits received by the public are not recoverable using assessments. The Engineer's Report apportions or spreads these special benefit amounts to the properties to be assessed.

Amounts are assessable to property under the Act for one fiscal year. Each year at this time, the City conducts assessment proceedings under the Act. In order to collect assessments going forward, the City must not receive a majority protest. If the City wishes to increase assessments within the meaning of the law (i.e. above the annual Consumer Price Index (CPI)), then the City must follow the specialized election proceedings under Proposition 218. In addition, Proposition 218 removes former provisions of statutory law that allowed public entities to be exempt from assessment.

DISCUSSION:

The process of annexation, calculating, and levying assessments in the Landscape Maintenance Districts is outlined in the California Streets and Highways Code, which the City of Santa Maria follows in these proceedings. The City of Santa Maria's process for annexation, calculating, and levying of assessments has been refined by the City Attorney in compliance with state law and the most recent case law. The recommended action tonight is to meet the statutory requirements by the City Council: 1) adopting a resolution approving the Engineer's Reports for assessment proceedings; and 2) declaring the intent to levy and collect the property tax assessments for each of the four Landscape Maintenance Districts and the SBZ's, and set a public hearing for June 2, 2026, to consider the proposed landscape assessments for approval.

[1] U. S. Department of Labor, Bureau of Labor Statistics for Urban Los Angeles-Riverside-Orange County areas – includes Santa Maria for the period ending December 31, 2025.

The Director of Finance has determined that the annual Consumer Price Index CPI[1] rose by 3.0 percent in calendar year 2025, requiring that the 2026 district and SBZ assessments be increased by 3.0 percent to keep pace with increased costs.

The proposed assessments are intended to provide adequate funding for district operations over the next fiscal year and are consistent with past City Council action. The action before City Council not only authorizes the levying and collection of the property tax assessment for the Landscape Maintenance Districts and the SBZs, but also authorizes the Director of Finance to transfer funds out of appropriated reserves in order to finance operational costs (unanticipated expenses or project overages) in the districts during the next fiscal year.

Fiscal Considerations

The attached supportive documents present the specific financing related to each of the Landscape Maintenance District Assessments for the "Master Districts" and the SBZs. To summarize, the Landscape Maintenance Districts and the SBZ's generate approximately $5.9 million in revenue to fund direct maintenance services and district operation costs. This revenue is collected from approximately 9,888 residential and 615 commercial properties in the districts. Since everyone who lives in the City of Santa Maria *benefits* from the well-kept, public easement landscaped areas, the City's General Fund provides a financial contribution, known as the "City's General Benefit," in the amount of $956,646. This contribution is made on behalf of the estimated 23,500 (commercial and residential) properties that existed prior to the creation of the Landscape Maintenance Districts. As new development occurs in older parts of the City, those properties are annexed into a Landscape Maintenance District or SBZ, so over time the General Benefit will begin to diminish.

During FY 2025-26, the Landscape Maintenance Districts experienced an across-the-board increase in costs of providing daily operations, renovation, project management, and irrigation water. In order to control the cost of water, staff is converting non-recreational turf to low water use plantings as renovation budgets permit. These conversions will result in long-term savings but require a significant upfront expenditure. Accordingly, Landscape Maintenance Districts will continue to face increased costs.

In 2026, there will be additional revenue from the new projects at Las Brisas at Betteravia Plaza, and others, into their respective districts.

[1] U. S. Department of Labor, Bureau of Labor Statistics for Urban Los Angeles-Riverside-Orange County areas – includes Santa Maria for the period ending December 31, 2016.

Impact on the Community

Landscaping along the City's major arterials and surrounding residential and commercial developments in the City are a positive indication of the fine quality of life in Santa Maria and its aesthetic appeal. Accordingly, the City's landscaping provides for the community's enjoyment, neighborhood cohesiveness, and beauty. And the assessments herein provide for perpetual care of these public areas and safeguard the assets of surrounding property owners.

RESOLUTION NO,

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SANTA MARIA, CALIFORNIA DECLARING ITS INTENTION TO LEVY AND COLLECT ASSESSMENTS AND SETTING A TIME AND PLACE FOR A PUBLIC HEARING THEREON FOR THE FOUR LANDSCAPE MAINTENANCE DISTRICTS AND THE 20 SPECIAL BENEFIT ZONES

WHEREAS, the City Council of the City of Santa Maria, California, at this time proposes to initiate proceedings for the assessment of property annexed to the Northeast, Northwest, Southwest and South Miller Street/South College Drive Landscape Maintenance Districts and the 18 Special Benefit Zones ("Districts"), pursuant to the terms and provisions of the Landscaping and Lighting Act of 1972 (Section *22500, et seq*. of the Streets and Highways Code); and

WHEREAS, the properties affected by these proceedings are described in Exhibit "E" and the boundaries of the Districts are shown on the map as Exhibit "F" incorporated herein by reference.

NOW, THEREFORE, IT IS HEREBY RESOLVED by the City Council of the City of Santa Maria, California, as follows:

SECTION 1. That the above recitals are true; and

SECTION 2. It is the intention of this legislative body to levy and collect assessments for

Fiscal Year 2026-27 to pay costs and expenses for the maintenance of retention basins, parks, sidewalks, graffiti abatement, pest abatement, street trees, and all other public landscaping; and

SECTION 3. By the terms of Resolution Numbers 1994-96, 1994-97, 1994-98, and 1994-99, dated June 7, 1994, the City Council adopted a formula for annual adjustment of assessments based on the Consumer Price Index Figures of the U. S. Department of Labor, Bureau of Labor Statistics for Urban Los Angeles-Riverside-Orange County Areas*; and

SECTION 4. The Director of Finance is authorized and directed to receive appropriate assessments as reported in the Engineer's Reports on Exhibit A-D of incorporated herein by reference. Additionally, the Director of Finance is authorized and directed to reallocate said appropriations and estimated revenues to reflect the final assessments as determined by the County of Santa Barbara; and

*U. S. Department of Labor, Bureau of Labor Statistics for Urban Los Angeles-Riverside-Orange County areas – includes Santa Maria Atty. Rev. 2025

SECTION 5. The improvements to be funded by the proposed assessment are generally described as follows: maintenance of retention basins, parks, sidewalks, and public thoroughfare landscaping, street trees, graffiti abatement, and pest abatement; and

SECTION 6. That the assessment districts affected by this Resolution of Intention are distinctively designated as follows: South Miller Street/South College Drive, Northeast, Northwest, and Southwest Landscape Maintenance Districts, and the 20 Special Benefit Zones; and

SECTION 7. That the property affected by the proposed assessments are described in Exhibit "E", and the boundaries of the Districts are shown on the map as Exhibit "F incorporated herein by reference; and

SECTION 8. Said work will provide a special and direct benefit to the properties as described in the Engineer's Reports previously approved by this Council; and

SECTION 9. The City Manager or his designee is hereby authorized to approve the transfer of funds from appropriated reserve accounts for the purpose of covering operational costs when needed; and

SECTION 10. That notice is hereby given that a public hearing on the questions of the proposed assessment is hereby scheduled at 6:30 p.m. in the City Council Chambers, which is located at 110 East Cook Street in Santa Maria, California, on Tuesday, June 2, 2026.

SECTION 11. That the City Clerk is hereby directed to give notice of the public hearing pursuant to Streets and Highways Code, Sections 22552 and 22553; and

SECTION 12. That the Engineer's Reports pertaining to the proposed proceedings are on file with the Chief Deputy City Clerk and should be referred to for a full and detailed description of the improvements, Landscape Maintenance District Boundaries, and any Special Benefit Zones therein, and the proposed assessments upon assessable lots and parcels of land within the Districts; and

SECTION 13. The Chief Deputy City Clerk is hereby authorized to make minor changes herein to address clerical errors, so long as substantial conformance of the intent of this document is maintained. In doing so, the Chief Deputy City Clerk shall consult with the City Manager and City Attorney concerning any changes deemed necessary.

ENGINEER'S REPORT AFFIDAVIT

This Report and the enclosed descriptions, budgets and diagram outline the proposed improvements and assessments for Landscape Maintenance Assessment District No. DS-9 in the City of Santa Maria for Fiscal Year 2026/2027, which includes each lot, parcel, and subdivision of land within said District, as the same existed at the time of the passage of the Resolution of Intention. Reference is hereby made to the Santa Barbara County Assessor's maps for a detailed description of the lines and dimensions of parcels within the District. The undersigned respectfully submits the enclosed Report as directed by the City Council.

Dated this 19th day of March, 2026.

INTRODUCTION

The City of Santa Maria ("City"), under the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code ("1972 Act") and in accordance with the provisions of the California State Constitution, Article XIIID ("California Constitution") annually levies and collects special assessments for the City's maintenance assessment district designated as **Northwest Landscape Maintenance Assessment District No. DS-9** (hereafter referred to as "District") to fund in whole or in part the maintenance and operation of landscaping improvements that provide special benefits to properties within the District.

The City Council on December 20, 1988, established the formation of the Northwest Landscape Maintenance District No. DS-9 for the purpose of financing the continued maintenance of the landscaping within the northwest quadrant of the City.

In accordance with the 1972 Act, the District also utilizes special benefit zones ("Zones") to address variations in the nature, location, and extent of the improvements that provide special benefits to specific parcels and developments within the District. Within the boundaries of the District, some parcels may be assigned to a special benefit zone, each of which is associated with specific improvements that provide special benefit to properties within that Zone that are in addition to the improvements proportionally shared by properties throughout the District.

For Fiscal Year 2026/2027 in addition to the shared District improvements and assessments, parcels within the following Zones may be assessed for local improvements specific to the parcels and developments within each respective Zone:

- Cherry Blossom Special Benefit Zone,
- North Preisker Ranch Special Benefit Zone,

Report Content and Annual Proceedings

This Engineer's Annual Report (the "Report") has been prepared pursuant to Chapter 1, Article 4 and Chapter 3 of the 1972 Act, and presented to the City Council for their consideration and approval of the proposed improvements and services to be provided within the District and the levy and collection of annual assessments related thereto for Fiscal Year 2026/2027. This Report outlines the District improvements, the special benefit zones, the method of apportionment, and proposed assessments to be levied in connection with the special benefits the properties will receive from the maintenance and servicing of the District improvements for Fiscal Year 2026/2027. The annual assessments to be levied on properties within the District provide a source of funding to fund in whole or in part, the continued operation and maintenance of the landscaping improvements and services to be provided by the District for the properties within the District and specified Zones for which the properties receive special benefits.

Each fiscal year, the City establishes the District's assessments based on an estimate of the costs to maintain, operate and service the authorized District improvements and based upon available revenues including assessment revenues, fund balances, general benefit contributions and any additional City contributions from available sources. The costs of the improvements and the proposed annual assessments budgeted and assessed against properties within the District may include, but are not limited to the estimated expenditures for regular annual maintenance and repairs; incidental expenditures related to the operation and administration of the District; deficits or surpluses from prior years; revenues from other sources; and the collection of funds for operational reserves and/or periodic repairs, replacements and rehabilitation projects as authorized by the 1972 Act. The net annual cost to provide the improvements within the District plus each benefit Zone (if applicable) are allocated to the benefiting properties within the District and respective Zones as applicable, using a weighted method of apportionment (refer to Assessment Methodology in Section II, Method of Apportionment) that calculates the proportional special benefit and assessment for each parcel as compared to other properties that benefit from the District improvements and services. Thus, each parcel is assessed proportionately for only those improvements, services, and expenses for which the parcel will receive special benefit.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own Assessor's Parcel Number ("APN") by the Santa Barbara County Assessor's Office. The Santa Barbara County Auditor/Controller uses Assessor's Parcel Numbers and specific Fund Numbers to identify properties to be assessed on the tax roll for the District assessments.

At a noticed annual Public Hearing, the City Council will accept all public comments and written protests regarding the District and the annual levy of assessments. Based on those public comments and written protests, the City Council may order amendments to the Report or confirm the Report as submitted. Following final approval of the Report and confirmation of the assessments, the City Council will by Resolution, order the improvements to be made and confirm the levy and collection of assessments for Fiscal Year 2026/2027 pursuant to the 1972 Act. The assessments as approved will be submitted to the Santa Barbara County Auditor/Controller to be included on the property tax roll for each parcel.

As required by the 1972 Act, this Engineer's Report describes the improvements to be provided, maintained, and serviced by the District, an estimated budget for the District improvements, and the proposed assessments to be levied upon each assessable lot or parcel within the District for fiscal year 2026/2027.

Part I – Plans and Specifications: This section contains a general description of the District, special benefit zones ("Zones"), and the improvements and services that provide special benefits to the parcels within the District. The improvements, appurtenant facilities, and services that provide special benefits to the properties within the District and for which parcels are assessed may

include, but not limited to the installation and maintenance of landscaping improvements within the public right-of-way of streets within the District, retention basins, parks, public facilities and related amenities as well as associated operational and incidental expenses, and the collection of fund balances authorized by the 1972 Act. The plans and specifications contained in this Report generally describe the nature and extent of the improvements. In conjunction with these general descriptions, a visual depiction of the improvements may be provided in the District Diagrams contained in Part IV of this Report. More detailed information regarding the specific plans and specifications associated with the District improvements and Zone improvements are on file in the City Engineer's Office and by reference are made part of this Report.

Part II – Method of Apportionment: This section includes a discussion of the special and general benefits associated with the improvements to be provided within the District (Benefit Analysis). This section of the Report also outlines the basis upon which the estimated costs to provide such improvements has been apportioned to each parcel of land therein in proportion to the special benefits to be received. (the method of calculating each property's proportional special benefit assessment). This method of apportionment is consistent with the previously approved and adopted method of apportionment for the District.

Part III – Estimate of Costs: Identifies the estimated annual funding costs (Budgets) required for the maintenance and operation of the improvements in the District and Zones authorized by the 1972 Act and deemed appropriate to support the improvements, including, but not limited to, annual maintenance and service expenses, utility costs, and related incidental expenses. For fiscal year 2026/2027 annual contract maintenance costs have increased by three percent (3%). Those improvements and/or costs determined to be of general benefit shall be funded by a City contribution. In addition to the general benefit costs, the City may provide additional funding to support the maintenance and operation of the improvements considered to be of special benefit, but City staff shall make the determination of which improvements, and the extent of the services and activities that shall be provided based on available revenues.

This section also identifies and outlines an Assessment Range Formula (inflationary adjust) previously approved and adopted for the District assessments that provides for an annual adjustment to the maximum assessment rates, which establishes limits on future assessments, but also provides for reasonable cost adjustments due to inflation.

Part IV – District/Zone Diagrams: This section of the Report contains a series of diagrams showing the boundaries of the District and Zones for Fiscal Year 2026/2027 which incorporate the parcels determined to receive special benefits from the District improvements. These diagrams may also provide a visual depiction of the location of the improvements being maintained. The lines and

dimensions of each lot, parcel, and subdivision of land contained in the District and Zone diagrams are inclusive of the parcels listed in “Part V - Assessment Roll” of this Report and the corresponding County Assessor’s Parcel Maps for said parcels as they existed at the time this Report was prepared and shall incorporate all subsequent subdivisions, lot-line adjustments, or parcel changes therein. Reference is hereby made to the Santa Barbara County Assessor’s maps for a detailed description of the lines and dimensions of each lot and parcel of land within the District and Zones.

Part V – Assessment Roll: The assessment amounts to be levied and collected in fiscal year 2026/2027 for each parcel is based on the parcel’s calculated proportional special benefit as outlined in "Part II - Method of Apportionment" and the annual assessment rates established by the estimated budgets in "Part III - Estimate of Costs" of this Report. Due to the number of parcels within the District, the Assessment Roll for fiscal year 2026/2027 has been filed electronically with the City Clerk rather than displayed in this Report and by reference the listing of the Assessor’s Parcel Numbers and the corresponding assessment amounts are made part of this Report.

Note: If any section, subsection, sentence, clause, phrase, portion, zone, or subzone of this Engineer’s Report is, for any reason, held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining provisions of this Engineer’s Report and each section, subsection, subdivision, sentence, clause, phrase, portion, zone, or subzone thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, portions, zones, or subzones might subsequently be declared invalid or unconstitutional.

PART I – PLANS AND SPECIFICATIONS

The purpose of this District is to provide in part through annual assessments, funding for the installation, operation, and maintenance of landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins that control subdivision water runoff, parks, and easements.

As authorized by the 1972 Act, the improvements provided by the District and associated with each Zone therein may incorporate various local landscaping improvements and related amenities that were either installed in direct connection with the development of properties within the District and each respective Zone or were installed for the benefit of those properties resulting from property development or potential development of those properties and are considered necessary elements for the development of such properties to their full and best use and these improvements are maintained and serviced for the special benefit of real property within the District and/or Zones. The work to be performed within the District and each respective Zone may include but is not limited to (as applicable), the personnel, materials, equipment, electricity, water, contract services, repair and rehabilitation of the improvements and incidental expenses required to operate the District and provide the improvements and services.

Improvements provided within the District and/or Zone may include but are not limited to landscaping and related facilities and amenities located within designated street medians, parkway and streetscape side-panels, and entryways within the public right of ways or easements adjacent to public right of ways; and within public places including greenbelt areas, open spaces, and local parks within each respective Zone. These improvements may include, but are not limited to:

- various landscape materials such as trees, turf, shrubs, vines, ground cover, annual or perineal plantings;
- irrigation and drainage systems;
- structural amenities such as monuments, specialty or ornamental lighting, block walls, retaining walls, or other fencing associated with the landscape areas;
- hardscapes including mulch, decomposed granite surfaces, stamped concrete, and pavers;
- recreational amenities within parks or greenbelts that may include benches, play structures, picnic or other recreational facilities, signage, and related appurtenances.

The maintenance of these improvements may include, but is not limited to the regularly scheduled mowing, trimming, pruning, fertilization, pest control, weed/graffiti abatement, and public safety; installation, removal, replacement and rehabilitation of the landscaping, repair or replacement of irrigation or landscape drainage systems; and repair or replacement of hardscape improvements including sidewalks and recreational amenities. The Recreation and Parks Office

shall authorize and schedule such maintenance and servicing as needed and based on available District and/or Zone funding.

Reference is made to the plans and specifications currently on file at the City Engineer's Office relating to the design, recommended materials, and level of maintenance concerning the facilities to be maintained. The plans show plant species, size, and their location. Specifications for the improvements comply with the Standard Specifications of the Public Works Department, the 2019 California Building Code, and the Recreation and Parks Department Landscape and Irrigation Standards. For Fiscal Year 2026/2027 the improvements maintained within the District and for which parcels receive special benefits include but is not limited to the following:

NW LANDSCAPE MAINTENANCE DISTRICT No. DS-9	**TOTAL SQFT.**
Hidden Pines – easement frontage 400-600 Hidden Pines Way	21,011
Oak Valley – Taylor frontage (does not include school); Rancho Verde, Via Establo to Blosser, North Railroad at the 1900 block between Rancho Verde	97,275
and Taylor	
Blosser Medians – 100 North Blosser Road and 1100 West Main Street	2,392
Villas de la Sara – West Morrison and Oakley Avenue	6,340
Riverside Estates – frontage on Preisker Lane and Hidden Pines Way	8,412
Parkside – frontage on Preisker, parking lot, and playground	9,912
Parkside Basin— grassy basin at Portland Drive and Preisker	20,776
100 West Main Street – median	1,944
Railroad Median-Paved median	600
Cook Street Annex & Fire Station 1	9,945
Bradley Channel Multi-Purpose Trail – from Railroad to Preisker Park-all paved	14,000
Sanchez School – area from black rod iron fence to 3 feet east of the sidewalk on Depot	12,120
Blosser/Donovan Median – on Blosser south -paved median	1,610
Southeast corner of Depot and Morrison	1,500
Downtown medians – Broadway Medians from Fesler Street going south to the front of the Library; East and West Cook Street Medians; South Pine Street from Main Street to Cook Street; East Main Street Medians; 100 North McClelland Median; South Miller Medians from main Street to Cook Street	21,022
TCW – mall perimeter, some interior, and Ruffoni parking lot including Heritage Walk	88,352
Total Northwest Landscape Maintenance District No. DS-9	**355,715**

Zones of Benefit

In accordance with the 1972 Act, this District utilizes Zones to address variations in the nature, location, and extent of improvements that provide special benefits to specific parcels and developments within the District. Each Zone is associated with specific improvements and/or types of improvements that provide special benefit to properties within that Zone.

For Fiscal Year 2026/2027 the District includes two (2) designated Zones. The boundaries of each Zone are based on the improvements to be maintained and the relationship and proximity of the developments and properties that derive special benefits from those specific improvements. The following is a brief description and summary of the improvements associated within each Zone and for which parcels receive special benefits:

Cherry Blossom Special Benefit Zone

Improvements associated with the Cherry Blossom Special Benefit Zone include landscaped medians, landscaped open space, the park site, and specialty lighting associated with the frontages on Railroad and Hidden pines totaling and estimated 51,900 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Zone Assessment for fiscal year 2026/2027 will be $535.73 per assessor parcel number. This Zone assessment is imposed only upon parcels that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Cherry Blossom Special Benefit parcels are also assessed the Northwest Landscape Maintenance District residential assessment of $183.22 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

North Preisker Ranch Special Benefit Zone

Improvements associated with the North Preisker Ranch Special Benefit Zone include landscaped roundabouts, landscaped medians, landscaped open space, the park site, and specialty lighting associated with the frontages on Atlantic, Blosser (both sides), Canal (both sides), Railroad (up to wall), Boxcar and Caboose, path on Eagleton, both roundabouts and all entry medians totaling and estimated 243,867 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The North Preisker Ranch Special Benefit Zone Assessment for fiscal year 2026/2027 will be $395.33 per assessor parcel

number. This Zone assessment is imposed only upon parcels that receive a special benefit over and above general benefits provided to other parcels located in the District.

The North Preisker Ranch Special Benefit parcels have both commercial and residential components. These parcels are also assessed either the Northwest Landscape Maintenance District residential assessment of $183.22 per assessment unit or the commercial assessment of $586.30 per APN or tenant space as detailed in the Method of Apportionment provided in Part II of this Report.

Note: A visual depiction of the general location of the landscape improvement areas for the District and Zone boundaries are provided on the District Diagrams provided in Part IV of this Report.

Part II – Method of Apportionment

Legislative Requirements for Assessments

The estimated costs to provide the proposed improvements for Fiscal Year 2026/2027 have been identified and allocated to properties within the District and the Zones therein based on special benefit, consistent with the requirements of the 1972 Act and the assessment provisions of Proposition 218 (being contained in Article XIII D of the California Constitution). The improvements provided by this District and for which properties are assessed are identified as local landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins, parks, easements, and related amenities. The formulas used for calculating assessments and the designation of Zones herein reflect the composition of parcels within the District and the improvements and activities to be provided and have been designed to fairly apportion the cost of providing the improvements based on a determination of the proportional special benefits to each parcel.

Provisions of the 1972 Act

The 1972 Act permits the establishment of assessment districts by agencies for the purpose of providing certain public improvements, including the acquisition, construction, installation and servicing of landscape improvements and related facilities. The 1972 Act requires that the cost of these improvements be levied according to benefit rather than assessed value:

> Section 22573 defines the net amount to be assessed as follows:
>
> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements."*

Section 22574 provides for zones as follows:

"The diagram and assessment may classify various areas within an assessment district into different zones where, by reason of variations in the nature, location, and extent of the improvements, the various areas will receive differing degrees of benefit from the improvements. A zone shall consist of all territory which will receive substantially the same degree of benefit from the improvements."

Provisions of the California Constitution

In addition to the provisions of the 1972 Act, the Article XIII D of the California Constitution outlines specific requirements regarding assessments including the following:

Article XIII D Section 2d defines District as follows:

"District means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service";

Article XIII D Section 2i defines Special Benefit as follows:

*"Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit."*Article XIII D Section 4a defines proportional special benefit assessments as follows:

"An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."

Benefit Analysis

Special Benefits

The ongoing maintenance of landscaped areas within the District as addressed in this Report, provide aesthetic benefits to the properties and a more pleasant environment to walk, drive, live, and/or work. The primary function of these landscape improvements and related amenities is to serve as an aesthetically pleasing enhancement and green space for the benefit of the immediately surrounding properties and developments for which the improvements

were constructed and installed and/or were facilitated by the development or potential development of properties within the District and each respective Zone. In addition, the District provided landscaping improvements are an integral part of the physical environment associated with the parcels in the District and/or respective Zones and the proportional direct effect that trees, shrubs, and groundcover have on real property within the district including localized wind reduction; erosion control; storm water capture; noise attenuation; visual screening; ultraviolet light and glare reduction; and odor reduction are a direct and particular benefit to the properties in proximity to those improvements.

While some of the improvements may in part be visible to properties outside the District or Zone, collectively if these various improvements are not properly maintained, it is the parcels within the District and/or respective Zone (as may be applicable), that would be aesthetically burdened or environmentally impacted. Additionally, much of the landscaping within the street right-of-way serve as both a physical buffer as well as a sound reduction buffer between the roadways and the properties in the District and serve as a pleasant aesthetic amenity that enhances the approach to the parcels.

General Benefit

In reviewing the location and extent of the specific landscaped areas and improvements to be funded by District assessments and the proximity and relationship to properties to be assessed it is evident these improvements were primarily installed in connection with the development of properties therein or are improvements that would otherwise be shared by and required for development of properties in the District or Zone. It is also evident that the maintenance these improvements and the level of maintenance provided has a direct and particular impact (special benefit) only to those properties in proximity to those improvements and such maintenance beyond that which is required to ensure the safety and protection of the general public and property in general, has no direct quantifiable benefit to the public at large or properties outside the District and/or Zones.

In the absence of a special funding District or Zones, the City would typically be obligated to provide only limited (as needed) tree management, weed abatement, rodent control, and erosion control services for the landscape areas currently maintained within the District. This baseline level of service (general benefit level of service) would most likely provide for periodic servicing of the improvement areas on an as-needed basis to ensure public safety and essential property protection to avoid negative impacts on adjacent roadways and vehicles traveling on those roadways, and potential property damage resulting from erosion or fire hazards. However, this baseline level of service would clearly result in a far less visually pleasing environment than is created with the enhanced levels of services associated with the regular landscape maintenance provided in the District and funded by the special benefit assessments In addition to the baseline level of service general benefit, it is recognized that there are indirect or incidental general benefits to properties within the District as well as the general public that are associated with

regular landscape maintenance services associated with the districtwide improvements, including minimization of dust and debris, and air pollution reduction.

Although these types of benefits might best be characterized as indirect consequences of the special benefit of the landscape maintenance provided to parcels served by the District, for the purposes of this Report we assume these types of benefits to be general benefits, albeit general benefits that are extremely difficult to quantify. Therefore, on behalf of all parcels not assessed by a landscape maintenance district, yet deriving some level of general benefit from the District's landscaped improvements, the City has historically and will continue to contribute from the general fund a General Benefit Contribution that equals or exceeds the costs attributable to the baseline general benefit costs and indirect/incidental general benefit costs for the districtwide shared improvement areas as shown in the Estimate of Costs (Part III of this Report) as the "City General Benefit Contribution".

Assessment Methodology

To assess benefits equitably it is necessary to calculate each property's proportional share of the special benefits conferred by the funded improvements and service. The method utilized to determine assessments is called the "method of apportionment" or formula of cost spread ("spread formula"). Assessment Units ("AU"), often referred to as the Equivalent Benefit Unit (EBU) method of assessment apportionment is utilized for this District and establishes a basic unit (base value) of benefit and then calculates the benefit derived by each assessed parcel as a multiple (or a fraction) of that basic unit. The AU or EBU method of apportioning special benefits is typically seen as the most appropriate and equitable assessment methodology for districts formed under the 1972 Act, as the benefit to each parcel from the improvements are apportioned as a function of comparable property characteristics which may include but is not limited to land use and property size.

The method of apportionment originally developed for this District was based on an assessment spread formula appropriate for the various land uses, identifiable property characteristics and improvements within the District and utilizes an assigned number of comparative dwelling units for residential, non-residential, and undeveloped properties.

The majority of parcels within the District are residential parcels and the improvements are maintained to provide a uniform benefit within the boundaries of the District. Therefore, each dwelling unit, whether an apartment or single family residence is given a base value of one (1) unit. Parcels in other land use categories were then evaluated and rated by comparison with the basic unit. The assignment of unit values is based primarily on the intensity of land use and its comparison to the base unit. Two unit values have been assigned: a residential efficiency unit, 500 square feet or less, at 50 percent of the residential unit value and a commercial efficiency unit defined at 1200 square feet per commercial charge.

Land Use Classifications

Every parcel within the District is assigned a land use classification based on available parcel information obtained from the County Assessor's Office. It has been determined that a parcel use and size are the appropriate factors necessary to identify and calculate the proportional special benefits conveyed to each property within the District for the cost of improvements associated with that property. The following are typical site land uses described in Title 12 of the Santa Maria Municipal Code and their proposed Assessment Units. This list includes the majority of parcel uses within the City of Santa Maria and is applied in the calculation of the 2026/2027 fiscal year assessments.

A summary of the applied Equivalent Benefit Units (EBUs) for the various land use classifications within the District is shown in the following table:

LAND USE	ASSESSMENT UNITS
Residential	
• Single Family Residential	1 Unit per property
• Two Family Residential	1 Unit per dwelling
• Condominium/Townhouse	1 Unit per dwelling
• Apartment Residential	1 Unit per dwelling
• Mobile Home Parks	1 Unit per dwelling
• Efficiency Unit	.5 Unit per dwelling
Commercial	
• Small, Single Tenant	1 Unit per property
• Efficiency Unit > 1,200 SF	1 Unit per 1,200 SF
• Vacant > 10,000 SF	1 Unit per property
• Commercial Centers	4 Units per property
• Major Shopping Centers	7 Units per property
Trade/Services	
• Commercial/Professional Office	1 Unit per property
• Vacant > 25,000 SF	1 Unit per property
• Mid-Size Office	4 Units per property
• Major Office Buildings	7 Units per property
• Hospital/Large Medical Offices	7 Units per property
Industrial	
• Small Industrial	1 Unit per property
• Vacant > 50,000 SF	1 Unit per property
• Medium Industrial	4 Units per property
• Major Industrial	7 Units per property
Exempt	
• Open Space/Common Areas, Public Facilities, Parks, Redevelopment Agency	0 Units per property

Part III – Estimate of Costs

The following budgets outline the estimated costs to maintain and service the various landscaping improvements described in this Report for Fiscal Year 2026/2027.

The budgeted expenses outlined in the following pages for the District and the Zones therein reflect the estimated annual expenses required to support and maintain the improvements to be provided for fiscal year 2026/2027. The estimated annual expenses provided in the budgets are considered to be appropriate full-service level costs. These full-service expenses, minus the general benefit expenses (Expenses not assessed and identified as the City's financial obligation to support the improvements) result in the amount of funding the property owners should reasonably be assessed to fully fund their proportional special benefit from the improvements to be maintained ("Special Benefit Expenses").

Annual Inflationary Adjustment (Assessment Range Formula)

Pursuant to Article XIIID of the California Constitution (Proposition 218), any "new or increased assessments" require certain noticing and balloting requirements. However, Government Code Section 54954.6(a) provides that a "new or increased assessment" does not include "an assessment which does not exceed an assessment formula or range of assessments...previously adopted by the agency or approved by the voters in the area where the assessment is imposed." This definition of a new or increased assessment is reaffirmed in the Proposition 218 Omnibus Implementation Act, Government Code Section 53753.5.

As previously adopted and approved by the City Council, each fiscal year the maximum assessment rates established for the improvements in the previous fiscal year for the District and each Zone may be adjusted by the percentage increase of the Local Consumer Price Index (CPI). The Consumer Price Index used for the inflationary adjustment shall be for the Los Angeles- Riverside-Orange County Area for All Urban Consumers, as developed by U.S. Bureau of Labor Statistics. The CPI used shall be as determined by the Bureau of Labor Statistics for a similar period of time.

Each fiscal year the City shall identify the annual percentage change in the CPI, using the difference over a 12-month period between the current year and of the previous year as of January of each succeeding year. This percentage difference shall then establish the range of increase to the maximum assessment rates allowed. If the percentage change in the CPI is negative, the maximum assessment rates shall not be adjusted from the previous fiscal year (unchanged). Should the Bureau of Labor Statistics revise such index or discontinue the preparation of such index, the City may use the revised index or comparable system as approved by the City Council for determining fluctuations in the cost of living.

The percentage change in CPI from December 2024 to December 2025 as reported by the U.S. Bureau of Labor Statistics was 3 percent. Therefore, the maximum assessment rates for fiscal year 2026/2027 will be increased by 3 percent over the maximum assessment rates for fiscal year 2025/2026.

Part IV – District/Zone Diagrams

The following section contains a series of diagrams showing the boundaries of Santa Maria Landscape Maintenance Assessment District No. DS-9 and the Zones therein for Fiscal Year 2026/2027. In addition to depicting the boundaries of the Zones, the diagrams also provide a visual depiction of the general location of the improvement areas being funded and maintained within the District and Zones. All parcels that will receive a special benefit from the improvements provided within the District and each respective Zone consist of the lots, parcels and subdivisions of land within the boundaries of the District and/or Zones as depicted by these diagrams and the lines and dimensions of those lots, parcels and subdivisions of land shall be those lines and dimensions shown on the Santa Barbara County Assessor's parcel maps for the current fiscal year and by reference the Santa Barbara County Assessor's parcel maps are incorporated herein and made part of this Report. These diagrams along with the Assessment Roll incorporated in Part V of this Report constitute the District Assessment Diagram for Fiscal Year 2026/2027.

Part V - Assessment Rolls

Due to the number of parcels in the District, the Assessment Roll for fiscal year 2026/2027 (a listing of the parcels to be assessed within this District along with the assessment amounts) has been filed with the City Clerk in an electronic format and is, by reference, made part of this Report. The proposed Assessment Roll shall be available for public inspection in the City Clerk's Office during normal office hours.

The Assessment Roll identified the parcels within the District that are assessed for special benefits and their corresponding assessment amount(s) for fiscal year 2026/2027. Each parcel listed on the Assessment Roll is currently shown and illustrated on the County Assessor's Roll and the County Assessor's Parcel Number Maps (APN maps). These records are, by reference, made part of this Report and shall govern for all details concerning the description of the lots or parcels. All assessments presented on the assessment roll are subject to change as a result of parcel changes made by the County including parcel splits, parcel merges or development changes that occur prior to the County Assessor's Office securing the final roll and generating tax bills for fiscal year 2026/2027.

ENGINEER'S REPORT AFFIDAVIT

This Report and the enclosed descriptions, budgets and diagram outline the proposed improvements and assessments for Landscape Maintenance Assessment District No. DS-10 in the City of Santa Maria for Fiscal Year 2026/2027, which includes each lot, parcel, and subdivision of land within said District, as the same existed at the time of the passage of the Resolution of Intention. Reference is hereby made to the Santa Barbara County Assessor's maps for a detailed description of the lines and dimensions of parcels within the District. The undersigned respectfully submits the enclosed Report as directed by the City Council.

Dated this 19th day of March, 2026.

INTRODUCTION

The City of Santa Maria ("City"), under the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code ("1972 Act") and in accordance with the provisions of the California State Constitution, Article XIIID ("California Constitution") annually levies and collects special assessments for the City's maintenance assessment district designated as **Northeast Landscape Maintenance Assessment District No. DS-10** (hereafter referred to as "District") to fund in whole or in part the maintenance and operation of landscaping improvements that provide special benefits to properties within the District.

The City Council on May 2, 1989, established the formation of the Northeast Landscape Maintenance District No. DS-10 for the purpose of financing the continued maintenance of the landscaping within the northeast quadrant of the City.

In accordance with the 1972 Act, the District also utilizes special benefit zones ("Zones") to address variations in the nature, location, and extent of the improvements that provide special benefits to specific parcels and developments within the District. Within the boundaries of the District, some parcels may be assigned to a special benefit zone, each of which is associated with specific improvements that provide special benefit to properties within that Zone that are in addition to the improvements proportionally shared by properties throughout the District.

For Fiscal Year 2026/2027 in addition to the shared District improvements and assessments, parcels within the following Zones may be assessed for local improvements specific to the parcels and developments within each respective Zone:

- Suey and Donovan Special Benefit Zone,
- Rivergate Roemer Special Benefit Zone,
- Donovan Estates Special Benefit Zone,
- La Ventana Special Benefit Zone,

Report Content and Annual Proceedings

This Engineer's Annual Report (the "Report") has been prepared pursuant to Chapter 1, Article 4 and Chapter 3 of the 1972 Act, and presented to the City Council for their consideration and approval of the proposed improvements and services to be provided within the District and the levy and collection of annual assessments related thereto for Fiscal Year 2026/2027. This Report outlines the District improvements, the special benefit zones, the method of apportionment, and proposed assessments to be levied in connection with the special benefits the properties will receive from the maintenance and servicing of the District improvements for Fiscal Year 2026/2027. The annual assessments to be levied on properties within the District provide a source of funding to fund in whole or in part, the continued operation and maintenance of the

landscaping improvements and services to be provided by the District for the properties within the District and specified Zones for which the properties receive special benefits.

Each fiscal year, the City establishes the District's assessments based on an estimate of the costs to maintain, operate and service the authorized District improvements and based upon available revenues including assessment revenues, fund balances, general benefit contributions and any additional City contributions from available sources. The costs of the improvements and the proposed annual assessments budgeted and assessed against properties within the District may include, but are not limited to the estimated expenditures for regular annual maintenance and repairs; incidental expenditures related to the operation and administration of the District; deficits or surpluses from prior years; revenues from other sources; and the collection of funds for operational reserves and/or periodic repairs, replacements and rehabilitation projects as authorized by the 1972 Act. The net annual cost to provide the improvements within the District plus each benefit Zone (if applicable) are allocated to the benefiting properties within the District and respective Zones as applicable, using a weighted method of apportionment (refer to Assessment Methodology in Section II, Method of Apportionment) that calculates the proportional special benefit and assessment for each parcel as compared to other properties that benefit from the District improvements and services. Thus, each parcel is assessed proportionately for only those improvements, services, and expenses for which the parcel will receive special benefit.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own Assessor's Parcel Number ("APN") by the Santa Barbara County Assessor's Office. The Santa Barbara County Auditor/Controller uses Assessor's Parcel Numbers and specific Fund Numbers to identify properties to be assessed on the tax roll for the District assessments.

At a noticed annual Public Hearing, the City Council will accept all public comments and written protests regarding the District and the annual levy of assessments. Based on those public comments and written protests, the City Council may order amendments to the Report or confirm the Report as submitted. Following final approval of the Report and confirmation of the assessments, the City Council will by Resolution, order the improvements to be made and confirm the levy and collection of assessments for Fiscal Year 2026/2027 pursuant to the 1972 Act. The assessments as approved will be submitted to the Santa Barbara County Auditor/Controller to be included on the property tax roll for each parcel.

As required by the 1972 Act, this Engineer's Report describes the improvements to be provided, maintained, and serviced by the District, an estimated budget for the District improvements, and the proposed assessments to be levied upon each assessable lot or parcel within the District for fiscal year 2026/2027.

Part I – Plans and Specifications: This section contains a general description of the District, special benefit zones ("Zones"), and the improvements and services that provide special benefits to the parcels within the District. The improvements, appurtenant facilities, and services that provide special benefits to the properties within the District and for which parcels are assessed may include, but not limited to the installation and maintenance of landscaping improvements within the public right-of-way of streets within the District, retention basins, parks, public facilities and related amenities as well as associated operational and incidental expenses, and the collection of fund balances authorized by the 1972 Act. The plans and specifications contained in this Report generally describe the nature and extent of the improvements. In conjunction with these general descriptions, a visual depiction of the improvements may be provided in the District Diagrams contained in Part IV of this Report. More detailed information regarding the specific plans and specifications associated with the District improvements and Zone improvements are on file in the City Engineer's Office and by reference are made part of this Report.

Part II – Method of Apportionment: This section includes a discussion of the special and general benefits associated with the improvements to be provided within the District (Benefit Analysis). This section of the Report also outlines the basis upon which the estimated costs to provide such improvements has been apportioned to each parcel of land therein in proportion to the special benefits to be received. (the method of calculating each property's proportional special benefit assessment). This method of apportionment is consistent with the previously approved and adopted method of apportionment for the District.

Part III – Estimate of Costs: Identifies the estimated annual funding costs (Budgets) required for the maintenance and operation of the improvements in the District and Zones authorized by the 1972 Act and deemed appropriate to support the improvements, including, but not limited to, annual maintenance and service expenses, utility costs, and related incidental expenses. For fiscal year 2026/2027 annual contract maintenance costs have increased by three percent (3%). Those improvements and/or costs determined to be of general benefit shall be funded by a City contribution. In addition to the general benefit costs, the City may provide additional funding to support the maintenance and operation of the improvements considered to be of special benefit, but City staff shall make the determination of which improvements, and the extent of the services and activities that shall be provided based on available revenues.

This section also identifies and outlines an Assessment Range Formula (inflationary adjust) previously approved and adopted for the District assessments that provides for an annual adjustment to the maximum assessment rates, which establishes limits on future assessments, but also provides for reasonable cost adjustments due to inflation.

Part IV – District/Zone Diagrams: This section of the Report contains a series of diagrams showing the boundaries of the District and Zones for Fiscal Year 2026/2027 which incorporate the parcels determined to receive special benefits from the District improvements. These diagrams may also provide a visual depiction of the location of the improvements being maintained. The lines and dimensions of each lot, parcel, and subdivision of land contained in the District and Zone diagrams are inclusive of the parcels listed in "Part V - Assessment Roll" of this Report and the corresponding County Assessor's Parcel Maps for said parcels as they existed at the time this Report was prepared and shall incorporate all subsequent subdivisions, lot-line adjustments, or parcel changes therein. Reference is hereby made to the Santa Barbara County Assessor's maps for a detailed description of the lines and dimensions of each lot and parcel of land within the District and Zones.

Part V – Assessment Roll: The assessment amounts to be levied and collected in fiscal year 2026/2027 for each parcel is based on the parcel's calculated proportional special benefit as outlined in "Part II - Method of Apportionment" and the annual assessment rates established by the estimated budgets in "Part III - Estimate of Costs" of this Report. Due to the number of parcels within the District, the Assessment Roll for fiscal year 2026/2027 has been filed electronically with the City Clerk rather than displayed in this Report and by reference the listing of the Assessor's Parcel Numbers and the corresponding assessment amounts are made part of this Report.

Note: If any section, subsection, sentence, clause, phrase, portion, zone, or subzone of this Engineer's Report is, for any reason, held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining provisions of this Engineer's Report and each section, subsection, subdivision, sentence, clause, phrase, portion, zone, or subzone thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, portions, zones, or subzones might subsequently be declared invalid or unconstitutional.

PART I – PLANS AND SPECIFICATIONS

The purpose of this District is to provide in part through annual assessments, funding for the installation, operation, and maintenance of landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins that control subdivision water runoff, parks, and easements.

As authorized by the 1972 Act, the improvements provided by the District and associated with each Zone therein may incorporate various local landscaping improvements and related amenities that were either installed in direct connection with the development of properties within the District and each respective Zone or were installed for the benefit of those properties resulting from property development or potential development of those properties and are considered necessary elements for the development of such properties to their full and best use and these improvements are maintained and serviced for the special benefit of real property within the District and/or Zones. The work to be performed within the District and each respective Zone may include but is not limited to (as applicable), the personnel, materials, equipment, electricity, water, contract services, repair and rehabilitation of the improvements and incidental expenses required to operate the District and provide the improvements and services.

Improvements provided within the District and/or Zone may include but are not limited to landscaping and related facilities and amenities located within designated street medians, parkway and streetscape side-panels, and entryways within the public right of ways or easements adjacent to public right of ways; and within public places including greenbelt areas, open spaces, and local parks within each respective Zone. These improvements may include, but are not limited to:

- various landscape materials such as trees, turf, shrubs, vines, ground cover, annual or perineal plantings;
- irrigation and drainage systems;
- structural amenities such as monuments, specialty or ornamental lighting, block walls, retaining walls, or other fencing associated with the landscape areas;
- hardscapes including mulch, decomposed granite surfaces, stamped concrete, and pavers;
- recreational amenities within parks or greenbelts that may include benches, play structures, picnic or other recreational facilities, signage, and related appurtenances.

The maintenance of these improvements may include, but is not limited to the regularly scheduled mowing, trimming, pruning, fertilization, pest control, weed/graffiti abatement, and Public Safety; installation, removal, replacement and rehabilitation of the landscaping, repair or replacement of irrigation or landscape drainage systems; and repair or replacement of hardscape improvements including sidewalks and recreational amenities. The Recreation and Parks Office

shall authorize and schedule such maintenance and servicing as needed and based on available District and/or Zone funding.

Reference is made to the plans and specifications currently on file at the City Engineer's Office relating to the design, recommended materials, and level of maintenance concerning the facilities to be maintained. The plans show plant species, size, and their location. Specifications for the improvements comply with the Standard Specifications of the Public Works Department, the 2019 California Building Code, and the Recreation and Parks Department Landscape and Irrigation Standards. For Fiscal Year 2026/2027 the improvements maintained within the District and for which parcels receive special benefits include but is not limited to the following:

NE LANDSCAPE MAINTENANCE DISTRICT No. DS-10	TOTAL SQFT.
Emerald Park – Shrubs on College near Donovan	8,893
Emerald Basin – Grassy basin on College near Donovan	11,547
Donovan Medians	9,504
Riverside Terrace – 1800 block of Bayview Drive, open space on Seaward and around Basin on Kathryn	134,777
Riverside Basin – Grassy basin on Kathryn	24,686
Shields/Cochiolo – 1600 block Suey Road - frontage on Suey and Donovan, frontage on Antone and Floyd Court	61,476
Suey Basin – Grassy basin on Suey near Antone	14,774
Sierra Vista – frontage on Panther and Centennial, basin at the corner of Panther and Centennial and the breezeway off Mammoth	40,000
Rowland Estates – Shrubs and playground.	12,332
Rowland Basin – includes weedy basin	4,656
Canyon Homes – 1400 East Donovan Road entrance	3,764
Olive Garden – 1200 South Bradley median	2,900
Hancock College – 800 South Bradley median	3,064
Bradley Easement – south of Main Street to Jones Street	14,718
Transit Center	70,993
Hancock Terrace Bike Path-Miller to College	30,000
800 E Jones median-Paved island	462
Pepper Tree Medians – north of Donovan Road on Broadway	3,456
Stowell Road Easement – east of Miller Street	13,492
Alvin Overpass	59,513
North Bradley Ivy – Fesler Junior High easement area	15,493
Donovan/Miller Median	10,310
Via Rubio – Jewel Street only	4,836
Donovan Overpass	67,751
Pepperwood Median	1,819
East Main Street & 101-weedy shoulders	7,301

Bradley at Elks	22,310
Downtown medians – Broadway Medians from Fesler Street going south to the front of the Library; East and West Cook Street Medians; South Pine Street from Main Street to Cook Street; East Main Street Medians; 100 North McClelland Median; South Miller Medians from Main Street to Cook Street	21,022
TCE - mall perimeter includes bus turnout, theater, Macy's parking lot and pocket park at Main & Broadway	186,393
Fire Station # 5	32,997
Total Northeast Landscape Maintenance District No. DS-10	**895,239**

Zones of Benefit

In accordance with the 1972 Act, this District utilizes Zones to address variations in the nature, location, and extent of improvements that provide special benefits to specific parcels and developments within the District. Each Zone is associated with specific improvements and/or types of improvements that provide special benefit to properties within that Zone.

For Fiscal Year 2026/2027 the District includes four (4) designated Zones. The boundaries of each Zone are based on the improvements to be maintained and the relationship and proximity of the developments and properties that derive special benefits from those specific improvements. The following is a brief description and summary of the improvements associated within each Zone and for which parcels receive special benefits:

Suey and Donovan Special Benefit Zone

Improvements associated with the Suey and Donovan Special Benefit Zone include the landscaped medians on Donavan between Suey and Suey Crossing totaling an estimated 33,725 square feet of which 40 percent is hardscape (13,490 square feet) and 60 percent is irrigated turf, trees, and shrubs (20,235 square feet).

Maintenance costs include labor, equipment, plant materials and supplies, renovation, utility costs, and District administration. The Suey and Donovan Special Benefit Zone Assessment for fiscal year 2026/2027 will be $307.61 per dwelling unit. This Zone assessment is imposed only upon parcels that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Suey and Donovan Special Benefit parcels are also assessed the Northeast Landscape Maintenance District residential assessment of $315.70 per assessment unit or the commercial assessment of $780.98 per APN or tenant space as detailed in Method of Apportionment provided in Part II of this Report.

Rivergate Roemer Special Benefit Zone

The developments in the Rivergate Roemer Special Benefit Zone include College Estates I and II, Princess Estates I, II and III, and River Oaks North. Improvements for the Rivergate Roemer Special Benefit Zone include the landscaped medians, landscaped open space, the park site/basin, and specialty lighting associated with the medians and frontage easements of River Oaks North, College Estates, and Princess Estates including Seaward, Paden, Carlotti, Borges, the Bradley Channel, and the walled area behind the homes on Mariah totaling an estimated 163,936 square feet of improvement area.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Rivergate Roemer Special Benefit Zone Assessment will be $276.78 per parcel for fiscal year 2026/2027. This Zone assessment is imposed only upon parcels that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Rivergate Roemer Special Benefit parcels are also assessed the Northeast Landscape Maintenance District residential assessment of $315.70 per assessment unit or the commercial assessment of $780.98 per APN or tenant space as detailed in Method of Apportionment provided in Part II of this Report.

Donovan Estates Special Benefit Zone

The improvements that are associated with the Donovan Estates Special Benefit Zone include the public easement areas along Donovan Road frontage (25,586 square feet), the park site and retardation basin (11,652 square feet) collectively totaling an estimated 37,238 square feet of improvements that includes the maintenance of the tot lot, street trees, public safety, and anti-graffiti measures as necessary.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Donovan Estates Special Benefit Zone Assessment will be $347.70 per parcel for fiscal year 2026/2027. This Zone assessment is imposed only upon parcels that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Donovan Estates Special Benefit Zone parcels are also assessed the Northeast Landscape Maintenance District residential assessment of $315.70 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

La Ventana Special Benefit Zone

The developments in this zone include La Ventana and Legacy. The improvements that are associated with La Ventana Special Benefit Zone include the public easement frontage areas along Main Street and Panther Drive to Willingham, Dressler, interior street enhancements and shrub portion of basin (106,042 square feet) and the weedy portion of the retention basin (45,112 square feet) collectively totaling an estimated 151,154 square feet of improvements that includes the maintenance of specialty lighting, street trees, public safety, and anti-graffiti measures as necessary.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The La Ventana Special Benefit Zone Assessment for fiscal year 2026/2027 will be $491.30 per assessor parcel number. This Zone assessment is imposed only upon parcels that receive a special benefit over and above general benefits provided to other parcels located in the District.

The La Ventana Special Benefit Zone parcels are also assessed the Northeast Landscape Maintenance District residential assessment of $315.70 per assessment unit or tenant space as detailed in Method of Apportionment provided in Part II of this Report.

Note: A visual depiction of the general location of the landscape improvement areas for the District and Zone boundaries are provided on the District Diagrams provided in Part IV of this Report.

Part II – Method of Apportionment

Legislative Requirements for Assessments

The estimated costs to provide the proposed improvements for Fiscal Year 2026/2027 have been identified and allocated to properties within the District and the Zones therein based on special benefit, consistent with the requirements of the 1972 Act and the assessment provisions of Proposition 218 (being contained in Article XIII D of the California Constitution). The improvements provided by this District and for which properties are assessed are identified as local landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins, parks, easements, and related amenities. The formulas used for calculating assessments and the designation of Zones herein reflect the composition of parcels within the District and the improvements and activities to be provided and have been designed to fairly apportion the cost of providing the improvements based on a determination of the proportional special benefits to each parcel.

Provisions of the 1972 Act

The 1972 Act permits the establishment of assessment districts by agencies for the purpose of providing certain public improvements, including the acquisition, construction, installation and servicing of landscape improvements and related facilities. The 1972 Act requires that the cost of these improvements be levied according to benefit rather than assessed value:

> Section 22573 defines the net amount to be assessed as follows:
>
> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements."*
>
> Section 22574 provides for zones as follows:
>
> *"The diagram and assessment may classify various areas within an assessment district into different zones where, by reason of variations in the nature, location, and extent of the improvements, the various areas will receive differing degrees of benefit from the improvements. A zone shall consist of all territory which will receive substantially the same degree of benefit from the improvements."*

Provisions of the California Constitution

In addition to the provisions of the 1972 Act, the Article XIII D of the California Constitution outlines specific requirements regarding assessments including the following:

> Article XIII D Section 2d defines District as follows:

"District means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service";

Article XIII D Section 2i defines Special Benefit as follows:

"Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit." Article XIII D Section 4a defines proportional special benefit assessments as follows:

"An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."

Benefit Analysis

Special Benefits

The ongoing maintenance of landscaped areas within the District as addressed in this Report, provide aesthetic benefits to the properties and a more pleasant environment to walk, drive, live, and/or work. The primary function of these landscape improvements and related amenities is to serve as an aesthetically pleasing enhancement and green space for the benefit of the immediately surrounding properties and developments for which the improvements were constructed and installed and/or were facilitated by the development or potential development of properties within the District and each respective Zone. In addition, the District provided landscaping improvements are an integral part of the physical environment associated with the parcels in the District and/or respective Zones and the proportional direct effect that trees, shrubs, and groundcover have on real property within the district including localized wind reduction; erosion control; storm water capture; noise attenuation; visual screening; ultraviolet light and glare reduction; and odor reduction are a direct and particular benefit to the properties in proximity to those improvements.

While some of the improvements may in part be visible to properties outside the District or Zone, collectively if these various improvements are not properly maintained, it is the parcels within the District and/or respective Zone (as may be applicable), that would be aesthetically burdened or environmentally impacted. Additionally, much of the landscaping within the street right-of-way serve as both a physical buffer as well as a sound reduction buffer between the roadways and the properties in the District and serve as a pleasant aesthetic amenity that

enhances the approach to the parcels.

General Benefit

In reviewing the location and extent of the specific landscaped areas and improvements to be funded by District assessments and the proximity and relationship to properties to be assessed it is evident these improvements were primarily installed in connection with the development of properties therein or are improvements that would otherwise be shared by and required for development of properties in the District or Zone. It is also evident that the maintenance these improvements and the level of maintenance provided has a direct and particular impact (special benefit) only to those properties in proximity to those improvements and such maintenance beyond that which is required to ensure the safety and protection of the general public and property in general, has no direct quantifiable benefit to the public at large or properties outside the District and/or Zones.

In the absence of a special funding District or Zones, the City would typically be obligated to provide only limited (as needed) tree management, weed abatement, rodent control, and erosion control services for the landscape areas currently maintained within the District. This baseline level of service (general benefit level of service) would most likely provide for periodic servicing of the improvement areas on an as-needed basis to ensure public safety and essential property protection to avoid negative impacts on adjacent roadways and vehicles traveling on those roadways, and potential property damage resulting from erosion or fire hazards. However, this baseline level of service would clearly result in a far less visually pleasing environment than is created with the enhanced levels of services associated with the regular landscape maintenance provided in the District and funded by the special benefit assessments In addition to the baseline level of service general benefit, it is recognized that there are indirect or incidental general benefits to properties within the District as well as the general public that are associated with regular landscape maintenance services associated with the districtwide improvements, including minimization of dust and debris, and air pollution reduction.

Although these types of benefits might best be characterized as indirect consequences of the special benefit of the landscape maintenance provided to parcels served by the District, for the purposes of this Report we assume these types of benefits to be general benefits, albeit general benefits that are extremely difficult to quantify. Therefore, on behalf of all parcels not assessed by a landscape maintenance district, yet deriving some level of general benefit from the District's landscaped improvements, the City has historically and will continue to contribute from the general fund a General Benefit Contribution that equals or exceeds the costs attributable to the baseline general benefit costs and indirect/incidental general benefit costs for the districtwide shared improvement areas as shown in the Estimate of Costs (Part III of this Report) as the "City General Benefit Contribution".

Assessment Methodology

To assess benefits equitably it is necessary to calculate each property's proportional share of the special benefits conferred by the funded improvements and service. The method utilized to determine assessments is called the "method of apportionment" or formula of cost spread ("spread formula"). Assessment Units ("AU"), often referred to as the Equivalent Benefit Unit (EBU) method of assessment apportionment is utilized for this District and establishes a basic unit (base value) of benefit and then calculates the benefit derived by each assessed parcel as a multiple (or a fraction) of that basic unit. The AU or EBU method of apportioning special benefits is typically seen as the most appropriate and equitable assessment methodology for districts formed under the 1972 Act, as the benefit to each parcel from the improvements are apportioned as a function of comparable property characteristics which may include but is not limited to land use and property size.

The method of apportionment originally developed for this District was based on an assessment spread formula appropriate for the various land uses, identifiable property characteristics and improvements within the District and utilizes an assigned number of comparative dwelling units for residential, non-residential, and undeveloped properties.

The majority of parcels within the District are residential parcels and the improvements are maintained to provide a uniform benefit within the boundaries of the District. Therefore, each dwelling unit, whether an apartment or single family residence is given a base value of one (1) unit. Parcels in other land use categories were then evaluated and rated by comparison with the basic unit. The assignment of unit values is based primarily on the intensity of land use and its comparison to the base unit. Two unit values have been assigned: a residential efficiency unit, 500 square feet or less, at 50 percent of the residential unit value and a commercial efficiency unit defined at 1200 square feet per commercial charge.

Land Use Classifications

Every parcel within the District is assigned a land use classification based on available parcel information obtained from the County Assessor's Office. It has been determined that a parcel use and size are the appropriate factors necessary to identify and calculate the proportional special benefits conveyed to each property within the District for the cost of improvements associated with that property. The following are typical site land uses described in Title 12 of the Santa Maria Municipal Code and their proposed Assessment Units. This list includes the majority of parcel uses within the City of Santa Maria and is applied in the calculation of the 2026/2027 fiscal year assessments.

A summary of the applied Equivalent Benefit Units (EBUs) for the various land use classifications within the District is shown in the following table:

LAND USE	ASSESSMENT UNITS
Residential	
• Single Family Residential	1 Unit per property
• Two Family Residential	1 Unit per dwelling
• Condominium/Townhouse	1 Unit per dwelling
• Apartment Residential	1 Unit per dwelling
• Mobile Home Parks	1 Unit per dwelling
• Efficiency Unit	.5 Unit per dwelling
Commercial	
• Small, Single Tenant	1 Unit per property
• Efficiency Unit > 1,200 SF	1 Unit per 1,200 SF
• Vacant > 10,000 SF	1 Unit per property
• Commercial Centers	4 Units per property
• Major Shopping Centers	7 Units per property
Trade/Services	
• Commercial/Professional Office	1 Unit per property
• Vacant > 25,000 SF	1 Unit per property
• Mid-Size Office	4 Units per property
• Major Office Buildings	7 Units per property
• Hospital/Large Medical Offices	7 Units per property
Industrial	
• Small Industrial	1 Unit per property
• Vacant > 50,000 SF	1 Unit per property
• Medium Industrial	4 Units per property
• Major Industrial	7 Units per property
Exempt	
• Open Space/Common Areas, Public Facilities, Parks, Redevelopment Agency	0 Units per property

Part III – Estimate of Costs

The following budgets outline the estimated costs to maintain and service the various landscaping improvements described in this Report for Fiscal Year 2026/2027.

The budgeted expenses outlined in the following pages for the District and the Zones therein reflect the estimated annual expenses required to support and maintain the improvements to be provided for fiscal year 2026/2027. The estimated annual expenses provided in the budgets are considered to be appropriate full-service level costs. These full-service expenses, minus the general benefit expenses (Expenses not assessed and identified as the City's financial obligation to support the improvements) result in the amount of funding the property owners should reasonably be assessed to fully fund their proportional special benefit from the improvements to be maintained ("Special Benefit Expenses").

Annual Inflationary Adjustment (Assessment Range Formula)

Pursuant to Article XIIID of the California Constitution (Proposition 218), any "new or increased assessments" require certain noticing and balloting requirements. However, Government Code Section 54954.6(a) provides that a "new or increased assessment" does not include "an assessment which does not exceed an assessment formula or range of assessments...previously adopted by the agency or approved by the voters in the area where the assessment is imposed." This definition of a new or increased assessment is reaffirmed in the Proposition 218 Omnibus Implementation Act, Government Code Section 53753.5.

As previously adopted and approved by the City Council, each fiscal year the maximum assessment rates established for the improvements in the previous fiscal year for the District and each Zone may be adjusted by the percentage increase of the Local Consumer Price Index (CPI). The Consumer Price Index used for the inflationary adjustment shall be for the Los Angeles- Riverside-Orange County Area for All Urban Consumers, as developed by U.S. Bureau of Labor Statistics. The CPI used shall be as determined by the Bureau of Labor Statistics for a similar period of time.

Each fiscal year the City shall identify the annual percentage change in the CPI, using the difference over a 12-month period between the current year and of the previous year as of January of each succeeding year. This percentage difference shall then establish the range of increase to the maximum assessment rates allowed. If the percentage change in the CPI is negative, the maximum assessment rates shall not be adjusted from the previous fiscal year (unchanged). Should the Bureau of Labor Statistics revise such index or discontinue the preparation of such index, the City may use the revised index or comparable system as approved by the City Council for determining fluctuations in the cost of living.

The percentage change in CPI from December 2024 to December 2025 as reported by the U.S. Bureau of Labor Statistics was 3 percent. Therefore, the maximum assessment rates for fiscal year 2026/2027 will be increased by 3 percent over the maximum assessment rates for fiscal year 2025/2026.

Part IV – District/Zone Diagrams

The following section contains a series of diagrams showing the boundaries of Santa Maria Landscape Maintenance Assessment District No. DS-10 and the Zones therein for Fiscal Year 2026/2027. In addition to depicting the boundaries of the Zones, the diagrams also provide a visual depiction of the general location of the improvement areas being funded and maintained within the District and Zones. All parcels that will receive a special benefit from the improvements provided within the District and each respective Zone consist of the lots, parcels and subdivisions of land within the boundaries of the District and/or Zones as depicted by these diagrams and the lines and dimensions of those lots, parcels and subdivisions of land shall be those lines and dimensions shown on the Santa Barbara County Assessor's parcel maps for the current fiscal year and by reference the Santa Barbara County Assessor's parcel maps are incorporated herein and made part of this Report. These diagrams along with the Assessment Roll incorporated in Part V of this Report constitute the District Assessment Diagram for Fiscal Year 2026/2027.

Part V - Assessment Rolls

Due to the number of parcels in the District, the Assessment Roll for fiscal year 2026/2027 (a listing of the parcels to be assessed within this District along with the assessment amounts) has been filed with the City Clerk in an electronic format and is, by reference, made part of this Report. The proposed Assessment Roll shall be available for public inspection in the City Clerk's Office during normal office hours.

The Assessment Roll identified the parcels within the District that are assessed for special benefits and their corresponding assessment amount(s) for fiscal year 2026/2027. Each parcel listed on the Assessment Roll is currently shown and illustrated on the County Assessor's Roll and the County Assessor's Parcel Number Maps (APN maps). These records are, by reference, made part of this Report and shall govern for all details concerning the description of the lots or parcels. All assessments presented on the assessment roll are subject to change as a result of parcel changes made by the County including parcel splits, parcel merges or development changes that occur prior to the County Assessor's Office securing the final roll and generating tax bills for fiscal year 2026/2027.

ENGINEER'S REPORT AFFIDAVIT

This Report and the enclosed descriptions, budgets, and diagram outline the proposed improvements and assessments for Landscape Maintenance Assessment District No. DS-11 in the City of Santa Maria for Fiscal Year 2026/2027, which includes each lot, parcel, and subdivision of land within said District, as the same existed at the time of the passage of the Resolution of Intention. Reference is hereby made to the Santa Barbara County Assessor's maps for a detailed description of the lines and dimensions of parcels within the District. The undersigned respectfully submits the enclosed Report as directed by the City Council.

Dated this 19th day of March, 2026.

INTRODUCTION

The City of Santa Maria ("City"), under the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code ("1972 Act") and in accordance with the provisions of the California State Constitution, Article XIIID ("California Constitution") annually levies and collects special assessments for the City's maintenance assessment district designated as **Southwest Landscape Maintenance Assessment District No. DS-11** (hereafter referred to as "District") to fund in whole or in part the maintenance and operation of landscaping improvements that provide special benefits to properties within the District.

The City Council on May 2, 1989, established the formation of the Southwest Landscape Maintenance District No. DS-11 for the purpose of financing the continued maintenance of the landscaping within the southwest quadrant of the City.

In accordance with the 1972 Act, the District also utilizes special benefit zones ("Zones") to address variations in the nature, location, and extent of the improvements that provide special benefits to specific parcels and developments within the District. Within the boundaries of the District, some parcels may be assigned to a special benefit zone, each of which is associated with specific improvements that provide special benefit to properties within that Zone that are in addition to the improvements proportionally shared by properties throughout the District.

For Fiscal Year 2026/2027 in addition to the shared District improvements and assessments, parcels within the following Zones may be assessed for local improvements specific to the parcels and developments within each respective Zone:

- Westgate Ranch Special Benefit Zone,
- Cherrywood Special Benefit Zone,
- Coyway Special Benefit Zone,
- Rose Garden Village Special Benefit Zone,
- Stowell Center Plaza Special Benefit Zone,
- Acquistapace Special Benefit Zone,
- Village at Westgate Ranch Special Benefit Zone,
- C-4 Development Special Benefit Zone,
- Betteravia Plaza

Report Content and Annual Proceedings

This Engineer's Annual Report (the "Report") has been prepared pursuant to Chapter 1, Article 4 and Chapter 3 of the 1972 Act, and presented to the City Council for their consideration and approval of the proposed improvements and services to be provided within the District and the levy and collection of annual assessments related thereto for Fiscal Year 2026/2027. This Report outlines the District improvements, the special benefit zones, the method of apportionment, and proposed assessments to be

levied in connection with the special benefits the properties will receive from the maintenance and servicing of the District improvements for Fiscal Year 2026/2027. The annual assessments to be levied on properties within the District provide a source of funding to fund in whole or in part, the continued operation and maintenance of the landscaping improvements and services to be provided by the District for the properties within the District and specified Zones for which the properties receive special benefits.

Each fiscal year, the City establishes the District's assessments based on an estimate of the costs to maintain, operate and service the authorized District improvements and based upon available revenues including assessment revenues, fund balances, general benefit contributions and any additional City contributions from available sources. The costs of the improvements and the proposed annual assessments budgeted and assessed against properties within the District may include, but are not limited to the estimated expenditures for regular annual maintenance and repairs; incidental expenditures related to the operation and administration of the District; deficits or surpluses from prior years; revenues from other sources; and the collection of funds for operational reserves and/or periodic repairs, replacements and rehabilitation projects as authorized by the 1972 Act. The net annual cost to provide the improvements within the District plus each benefit Zone (if applicable) are allocated to the benefiting properties within the District and respective Zones as applicable, using a weighted method of apportionment (refer to Assessment Methodology in Section II, Method of Apportionment) that calculates the proportional special benefit and assessment for each parcel as compared to other properties that benefit from the District improvements and services. Thus, each parcel is assessed proportionately for only those improvements, services, and expenses for which the parcel will receive special benefit.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own Assessor's Parcel Number ("APN") by the Santa Barbara County Assessor's Office. The Santa Barbara County Auditor/Controller uses Assessor's Parcel Numbers and specific Fund Numbers to identify properties to be assessed on the tax roll for the District assessments.

At a noticed annual Public Hearing, the City Council will accept all public comments and written protests regarding the District and the annual levy of assessments. Based on those public comments and written protests, the City Council may order amendments to the Report or confirm the Report as submitted. Following final approval of the Report and confirmation of the assessments, the City Council will by Resolution, order the improvements to be made and confirm the levy and collection of assessments for Fiscal Year 2026/2027 pursuant to the 1972 Act. The assessments as approved will be submitted to the Santa Barbara County Auditor/Controller to be included on the property tax roll for each parcel.

As required by the 1972 Act, this Engineer's Report describes the improvements to be provided, maintained, and serviced by the District, an estimated budget for the District improvements, and the proposed assessments to be levied upon each assessable lot or parcel within the District for fiscal year 2026/2027.

Part I – Plans and Specifications: This section contains a general description of the District, special benefit zones ("Zones"), and the improvements and services that provide special benefits to the parcels within

the District. The improvements, appurtenant facilities, and services that provide special benefits to the properties within the District and for which parcels are assessed may include, but not limited to the installation and maintenance of landscaping improvements within the public right-of-way of streets within the District, retention basins, parks, public facilities and related amenities as well as associated operational and incidental expenses, and the collection of fund balances authorized by the 1972 Act. The plans and specifications contained in this Report generally describe the nature and extent of the improvements. In conjunction with these general descriptions, a visual depiction of the improvements may be provided in the District Diagrams contained in Part IV of this Report. More detailed information regarding the specific plans and specifications associated with the District improvements and Zone improvements are on file in the City Engineer's Office and by reference are made part of this Report.

Part II – Method of Apportionment: This section includes a discussion of the special and general benefits associated with the improvements to be provided within the District (Benefit Analysis). This section of the Report also outlines the basis upon which the estimated costs to provide such improvements has been apportioned to each parcel of land therein in proportion to the special benefits to be received. (the method of calculating each property's proportional special benefit assessment). This method of apportionment is consistent with the previously approved and adopted method of apportionment for the District.

Part III – Estimate of Costs: Identifies the estimated annual funding costs (Budgets) required for the maintenance and operation of the improvements in the District and Zones authorized by the 1972 Act and deemed appropriate to support the improvements, including, but not limited to, annual maintenance and service expenses, utility costs, and related incidental expenses. For fiscal year 2026/2027 annual contract maintenance costs have increased by three percent (3%). Those improvements and/or costs determined to be of general benefit shall be funded by a City contribution. In addition to the general benefit costs, the City may provide additional funding to support the maintenance and operation of the improvements considered to be of special benefit, but City staff shall make the determination of which improvements, and the extent of the services and activities that shall be provided based on available revenues.

This section also identifies and outlines an Assessment Range Formula (inflationary adjust) previously approved and adopted for the District assessments that provides for an annual adjustment to the maximum assessment rates, which establishes limits on future assessments, but also provides for reasonable cost adjustments due to inflation.

Part IV – District/Zone Diagrams: This section of the Report contains a series of diagrams showing the boundaries of the District and Zones for Fiscal Year 2026/2027 which incorporate the parcels determined to receive special benefits from the District improvements. These diagrams may also provide a visual depiction of the location of the improvements being maintained. The lines and dimensions of each lot, parcel, and subdivision of land contained in the District and Zone diagrams are inclusive of the parcels listed in "Part V - Assessment Roll" of this Report and the corresponding County Assessor's Parcel Maps

for said parcels as they existed at the time this Report was prepared and shall incorporate all subsequent subdivisions, lot-line adjustments, or parcel changes therein. Reference is hereby made to the Santa Barbara County Assessor's maps for a detailed description of the lines and dimensions of each lot and parcel of land within the District and Zones.

Part V – Assessment Roll: The assessment amounts to be levied and collected in fiscal year 2026/2027 for each parcel is based on the parcel's calculated proportional special benefit as outlined in "Part II - Method of Apportionment" and the annual assessment rates established by the estimated budgets in "Part III - Estimate of Costs" of this Report. Due to the number of parcels within the District, the Assessment Roll for fiscal year 2026/2027 has been filed electronically with the City Clerk rather than displayed in this Report and by reference the listing of the Assessor's Parcel Numbers and the corresponding assessment amounts are made part of this Report.

Note: If any section, subsection, sentence, clause, phrase, portion, zone, or subzone of this Engineer's Report is, for any reason, held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining provisions of this Engineer's Report and each section, subsection, subdivision, sentence, clause, phrase, portion, zone, or subzone thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, portions, zones, or subzones might subsequently be declared invalid or unconstitutional.

PART I – PLANS AND SPECIFICATIONS

The purpose of this District is to provide in part through annual assessments, funding for the installation, operation, and maintenance of landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins that control subdivision water runoff, parks, and easements.

As authorized by the 1972 Act, the improvements provided by the District and associated with each Zone therein may incorporate various local landscaping improvements and related amenities that were either installed in direct connection with the development of properties within the District and each respective Zone or were installed for the benefit of those properties resulting from property development or potential development of those properties and are considered necessary elements for the development of such properties to their full and best use and these improvements are maintained and serviced for the special benefit of real property within the District and/or Zones. The work to be performed within the District and each respective Zone may include but is not limited to (as applicable), the personnel, materials, equipment, electricity, water, contract services, repair and rehabilitation of the improvements and incidental expenses required to operate the District and provide the improvements and services.

Improvements provided within the District and/or Zone may include but are not limited to landscaping and related facilities and amenities located within designated street medians, parkway and streetscape side-panels, and entryways within the public right of ways or easements adjacent to public right of ways; and within public places including greenbelt areas, open spaces, and local parks within each respective Zone. These improvements may include, but are not limited to:

- various landscape materials such as trees, turf, shrubs, vines, ground cover, annual or perineal plantings;
- irrigation and drainage systems;
- structural amenities such as monuments, specialty or ornamental lighting, block walls, retaining walls, or other fencing associated with the landscape areas;
- hardscapes including mulch, decomposed granite surfaces, stamped concrete, and pavers;
- recreational amenities within parks or greenbelts that may include benches, play structures, picnic or other recreational facilities, signage, and related appurtenances.

The maintenance of these improvements may include, but is not limited to the regularly scheduled mowing, trimming, pruning, fertilization, pest control, weed/graffiti abatement, and public safety; installation, removal, replacement and rehabilitation of the landscaping, repair or replacement of irrigation or landscape drainage systems; and repair or replacement of hardscape improvements including sidewalks and recreational amenities. The Recreation and Parks Office shall authorize and schedule such maintenance and servicing as needed and based on available District and/or Zone funding.

Reference is made to the plans and specifications currently on file at the City Engineer's Office relating to the design, recommended materials, and level of maintenance concerning the facilities to be maintained.

The plans show plant species, size, and their location. Specifications for the improvements comply with the Standard Specifications of the Public Works Department, the 2019 California Building Code, and the Recreation and Parks Department Landscape and Irrigation Standards. For Fiscal Year 2026/2027 the improvements maintained within the District and for which parcels receive special benefits include but is not limited to the following:

SW LANDSCAPE MAINTENANCE DISTRICT No. DS-11	TOTAL SQFT.
Terrace Park – 500 to 600 West Carmen Lane. This includes the frontage on Carmen, both sides of Depot, and the slope at the end of Depot, but not the area that extends behind the homes (it is the responsibility of the HOA).	14,401
Fire Station II – 400 West Carmen Lane frontage and interior, including easement on South Thornburg Street & slope	7,631
West Betteravia Median – 100 block West Betteravia Road	1,200
Country Club Village III – frontage on West McCoy Lane, entry medians, La Costa Basin/Marilyn Stanley Park, La Costa Breezeway – across from the basin/park site - breezeway off Castlerock leading to Hagerman bike trail	135,986
Foxenwoods Country Club Estates – 800 to 1100 West McCoy Lane	47,401
Santa Barbara Research Median – median on South Blosser Road	2,392
Skyway Drive Medians – all medians on Skyway Drive	104,031
Battles Bike Path – west of Broadway	14,000
Santa Maria Police Department	10,750
SMAT Station	32,715
Blending Station – Fairway and Skyway Drive	1,940
Paseo del Sol – frontages on South Westgate, South A, Carmen and West Via Rosa, and medians on Betteravia	56,103
Paseo del Sol Basin—at Carmen and A Street (empty trash cans)	45,572
Hagerman Bike Path - west of Hagerman Complex – paved path	68,800
Westridge – frontages and median on Carmen and basin/playground	44,613
Westridge Basin—along Via Rosa	37,240
Skyway and Foster Road Bike Path-paved path	106,984
Medians on Betteravia east and west of Blosser	9,968
Blosser/Stowell Medians-Paved medians	5,104
South Broadway Medians – south of Stowell to Betteravia	34,387
Parkland Cottages - McCoy frontage	10,943
Union Valley Parkway	512,222
Union Valley open space	40,075
Foxenwoods Estates	30,000
VTC Frontage	11,076
Dal Porto	3,006
Total Southwest Landscape Maintenance District No. DS-11	**1,388,540**

Zones of Benefit

In accordance with the 1972 Act, this District utilizes Zones to address variations in the nature, location, and extent of improvements that provide special benefits to specific parcels and developments within the District. Each Zone is associated with specific improvements and/or types of improvements that provide special benefit to properties within that Zone.

For Fiscal Year 2026/2027 the District includes nine (9) designated Zones. The boundaries of each Zone are based on the improvements to be maintained and the relationship and proximity of the developments and properties that derive special benefits from those specific improvements. The following is a brief description and summary of the improvements associated within each Zone and for which parcels receive special benefits:

Westgate Ranch Special Benefit Zone

Improvements associated with the Westgate Ranch Special Benefit Zone include the public landscape easement frontages on Battles, A Street, Westgate, Carmen, Sonya and Blosser, South west corner of Carmen & Blosser the medians on Carmen and the roundabout by the school and both multi-purpose trails and parkways along Park totaling an estimated 385,786385,786 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Westgate Ranch Special Benefit Zone Assessment for fiscal year 2026/2027 will be $434.34 per assessor parcel number or tenant space. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over, and above general benefits provided to other parcels located in the District.

The Westgate Ranch Special Benefit parcels are assessed the Southwest Landscape Maintenance District residential assessment of $281.94 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

Cherrywood Special Benefit Zone

Improvements associated with the Cherrywood Special Benefit Zone include the public landscape easement frontages on Carmen, Depot, Sonya and Thornburg, the pathway on Flora, and the pocket park on Thornburg totaling an estimated 22,151 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Cherrywood Special Benefit Zone Assessment for fiscal year 2026/2027 will be $444.62 per assessor parcel number. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over, and above general benefits provided to other parcels located in the District.

The Cherrywood Special Benefit Zone parcels are also assessed the Southwest Landscape Maintenance District residential assessment of $281.94 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

Coyway Special Benefit Zone

The Coyway subdivision consists of 12 commercial parcels. Improvements associated with the Coyway Special Benefit Zone include the public landscape easement at the corner of W. McCoy and Professional Parkway (an estimated 21,726 square feet) and the landscaped storm water retention basin (an estimated 13,349 square feet) totaling an estimated 35,075 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, renovation, utility costs, and District administration. The Coyway Special Benefit Zone Assessment for fiscal year 2026/2027 will be $7844.00 calculated based on the proportionate area each parcel occupies within the special benefit zone. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over, and above general benefits provided to other parcels located in the District.

The Coyway Special Benefit Zone parcels are also assessed the Southwest Landscape Maintenance District commercial assessment of $586.30 per parcel as detailed in Method of Apportionment provided in Part II of this Report.

Rose Garden Village Special Benefit Zone

The improvements that are associated with the Rose Garden Village Special Benefit Zone include the median on Blosser Road, the public easement frontages on Battles, Sonya, Biscayne, Western, Pergola, Provance, the multi-purpose trail, the park site, basin, and the street trees within the Zone totaling an estimated 310,157 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Rose Garden Village Special Benefit Zone Assessment for FY 2026/2027 will be $508.25 per assessor parcel number or tenant space. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over, and above general benefits provided to other parcels located in the District.

The Rose Garden Village Special Benefit Zone parcels are also assessed the Southwest Landscape Maintenance District residential assessment of $281.94 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

Acquistapace Special Benefit Zone

The improvements that are associated with the Acquistapace Special Benefit Zone at build out will include the median on Blosser Road, the public easement frontages on Sonya, Carmen, Western, Pergola, Biscayne,

Blosser, the multi-purpose trail, and the open space (Lot 170) (an estimated 129,217 square feet), as well as the Sonya Basin (grassy park site/basin) located along Sonya (an additional 268,935 square feet), and the street trees within the Zone collectively totaling an estimated 398,152 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, renovation, graffiti removal, utility costs, public safety, and District administration. The Acquistapace Special Benefit Zone Assessment for fiscal year 2026/2027 will be $317.17 per assessor parcel number. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over, and above general benefits provided to other parcels located in the District.

The Acquistapace Special Benefit Zone parcels are also assessed the Southwest Landscape Maintenance District residential assessment of $281.94 per assessment unit or tenant space as detailed in Method of Apportionment provided in Part II of this Report.

Stowell Center Plaza Special Benefit Zone

The Stowell Center Plaza owners will be assessed $838.79 per typical 2,500 square feet of retail space. These funds will be used for re-payment of a loan to resurface the parking lot; parking lot maintenance; trash pickup; cleaning public sidewalks, parking lot lighting/other electrical service and landscape maintenance. This assessment is imposed only upon parcels within the Zone that receive a special benefit over, and above general benefits provided to other parcels located in the District.

The Stowell Center Plaza Special Benefit Zone parcels are also assessed the Southwest Landscape Maintenance District commercial assessment of $*586*.30 per parcel as detailed in Method of Apportionment provided in Part II of this Report.

Village at Westgate Ranch Special Benefit Zone

The improvements associated with the Village at Westgate Ranch Special Benefit Zone include the public easement areas along the street frontages on Blosser Road, La Brea Avenue, Battles Road, Westgate Road, Marsala Avenue, and Sonya Lane (an estimated 345,107 square feet), as well as the Battles linear basin bottom from Blosser to the county flood control basin (an estimated 92,529 square feet), and the street trees within the Zone collectively totaling an estimated 437,636 square feet of improvements.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Village at Westgate Ranch Special Benefit Zone assessments for fiscal year 2026/2027 will be $545.46 per assessor parcel number or tenant space. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Village at Westgate Ranch Special Benefit Zone parcels are also assessed the Southwest Landscape Maintenance District residential assessment of $281.94 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

C-4 Development Special Benefit Zone

This subdivision currently consists of six (6) professional services parcels including the retention basin. At build out there will be two (2) two-story office buildings, two (2) one-story commercial buildings, and one (1) commercial building for recreational vehicle storage. The improvements associated with the C-4 Development Special Benefit Zone include the landscape storm water retention basin at McCoy totaling an estimated 32,609 square feet.

Maintenance costs include labor, equipment, plant materials and supplies, renovation, utility costs, and District administration. The C-4 Development Special Benefit Zone Assessment for fiscal year 2026/2027 will be $22,655 and assessed on percentage of square footage of each assessor parcel number. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over and above general benefits provided to other parcels located in the District.

The C-4 Development Special Benefit Zone parcels are also assessed the Southwest Landscape Maintenance District commercial assessment of $586.30 per parcel as detailed in Method of Apportionment provided in Part II of this Report.

BETTERAVIA PLAZA SPECIAL BENEFIT ZONE

Commercial and residential property assessments within the Betteravia Plaza Special Benefit Zone are calculated based on the proportionate area each property occupies within the special benefit zone. The Betteravia Plaza Special Benefit Zone Full Assessment for fiscal year 2026/2027 will be $180,042.81 . These assessments are imposed only upon properties that receive a special benefit over and above general and special benefits provided to other properties located in District No. DS-11.

Multifamily housing, professional offices, and many retail businesses comprise this Special Benefit Zone. The Betteravia Plaza Special Benefit Zone accounts for costs to maintain improvements which provide special benefits to properties within the zone. Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and district administration. Improvements associated with this Special Benefits Zone include signature 10 foot landscaped parkways, tree lined roadways, landscaped medians, and walking and biking paths. The special benefits provided by these improvements include community aesthetic enjoyment, neighborhood cohesion, beautification, local recreation and open space opportunities and additional increase in general property values, and improved public safety.

The Betteravia Plaza properties are also assessed the Southwest Landscape Maintenance District (Master District) commercial assessment of $586.30 per APN or tenant space and residential tenant space assessment of $281.94 per residential unit as detailed in Appendix A. General and special benefits provided by the base amount are identical to those detailed for District No. DS-11

Note: A visual depiction of the general location of the landscape improvement areas for the District and Zone boundaries are provided on the District Diagrams provided in Part IV of this Report.

Part II – Method of Apportionment

Legislative Requirements for Assessments

The estimated costs to provide the proposed improvements for Fiscal Year 2026/2027 have been identified and allocated to properties within the District and the Zones therein based on special benefit, consistent with the requirements of the 1972 Act and the assessment provisions of Proposition 218 (being contained in Article XIII D of the California Constitution). The improvements provided by this District and for which properties are assessed are identified as local landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins, parks, easements, and related amenities. The formulas used for calculating assessments and the designation of Zones herein reflect the composition of parcels within the District and the improvements and activities to be provided and have been designed to fairly apportion the cost of providing the improvements based on a determination of the proportional special benefits to each parcel.

Provisions of the 1972 Act

The 1972 Act permits the establishment of assessment districts by agencies for the purpose of providing certain public improvements, including the acquisition, construction, installation and servicing of landscape improvements and related facilities. The 1972 Act requires that the cost of these improvements be levied according to benefit rather than assessed value:

> Section 22573 defines the net amount to be assessed as follows:
>
> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements."*
>
> Section 22574 provides for zones as follows:
>
> *"The diagram and assessment may classify various areas within an assessment district into different zones where, by reason of variations in the nature, location, and extent of the improvements, the various areas will receive differing degrees of benefit from the improvements. A zone shall consist of all territory which will receive substantially the same degree of benefit from the improvements."*

Provisions of the California Constitution

In addition to the provisions of the 1972 Act, the Article XIII D of the California Constitution outlines specific requirements regarding assessments including the following:

> Article XIII D Section 2d defines District as follows:
>
> *"District means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service";*

Article XIII D Section 2i defines Special Benefit as follows:

"Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit." Article XIII D Section 4a defines proportional special benefit assessments as follows:

"An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."

Benefit Analysis

Special Benefits

The ongoing maintenance of landscaped areas within the District as addressed in this Report, provide aesthetic benefits to the properties and a more pleasant environment to walk, drive, live, and/or work. The primary function of these landscape improvements and related amenities is to serve as an aesthetically pleasing enhancement and green space for the benefit of the immediately surrounding properties and developments for which the improvements were constructed and installed and/or were facilitated by the development or potential development of properties within the District and each respective Zone. In addition, the District provided landscaping improvements are an integral part of the physical environment associated with the parcels in the District and/or respective Zones and the proportional direct effect that trees, shrubs, and groundcover have on real property within the district including localized wind reduction; erosion control; storm water capture; noise attenuation; visual screening; ultraviolet light and glare reduction; and odor reduction are a direct and particular benefit to the properties in proximity to those improvements.

While some of the improvements may in part be visible to properties outside the District or Zone, collectively if these various improvements are not properly maintained, it is the parcels within the District and/or respective Zone (as may be applicable), that would be aesthetically burdened or environmentally impacted. Additionally, much of the landscaping within the street right-of-way serve as both a physical buffer as well as a sound reduction buffer between the roadways and the properties in the District and serve as a pleasant aesthetic amenity that enhances the approach to the parcels.

General Benefit

In reviewing the location and extent of the specific landscaped areas and improvements to be funded by District assessments and the proximity and relationship to properties to be assessed it is evident these improvements were primarily installed in connection with the development of properties therein or are improvements that would otherwise be shared by and required for development of properties in the

District or Zone. It is also evident that the maintenance these improvements and the level of maintenance provided has a direct and particular impact (special benefit) only to those properties in proximity to those improvements and such maintenance beyond that which is required to ensure the safety and protection of the general public and property in general, has no direct quantifiable benefit to the public at large or properties outside the District and/or Zones.

In the absence of a special funding District or Zones, the City would typically be obligated to provide only limited (as needed) tree management, weed abatement, rodent control, and erosion control services for the landscape areas currently maintained within the District. This baseline level of service (general benefit level of service) would most likely provide for periodic servicing of the improvement areas on an as-needed basis to ensure public safety and essential property protection to avoid negative impacts on adjacent roadways and vehicles traveling on those roadways, and potential property damage resulting from erosion or fire hazards. However, this baseline level of service would clearly result in a far less visually pleasing environment than is created with the enhanced levels of services associated with the regular landscape maintenance provided in the District and funded by the special benefit assessments In addition to the baseline level of service general benefit, it is recognized that there are indirect or incidental general benefits to properties within the District as well as the general public that are associated with regular landscape maintenance services associated with the districtwide improvements, including minimization of dust and debris, and air pollution reduction.

Although these types of benefits might best be characterized as indirect consequences of the special benefit of the landscape maintenance provided to parcels served by the District, for the purposes of this Report we assume these types of benefits to be general benefits, albeit general benefits that are extremely difficult to quantify. Therefore, on behalf of all parcels not assessed by a landscape maintenance district, yet deriving some level of general benefit from the District's landscaped improvements, the City has historically and will continue to contribute from the general fund a General Benefit Contribution that equals or exceeds the costs attributable to the baseline general benefit costs and indirect/incidental general benefit costs for the districtwide shared improvement areas as shown in the Estimate of Costs (Part III of this Report) as the "City General Benefit Contribution".

Assessment Methodology

To assess benefits equitably it is necessary to calculate each property's proportional share of the special benefits conferred by the funded improvements and service. The method utilized to determine assessments is called the "method of apportionment" or formula of cost spread ("spread formula"). Assessment Units ("AU"), often referred to as the Equivalent Benefit Unit (EBU) method of assessment apportionment is utilized for this District and establishes a basic unit (base value) of benefit and then calculates the benefit derived by each assessed parcel as a multiple (or a fraction) of that basic unit. The AU or EBU method of apportioning special benefits is typically seen as the most appropriate and equitable assessment methodology for districts formed under the 1972 Act, as the benefit to each parcel from the improvements are apportioned as a function of comparable property characteristics which may include but is not limited to land use and property size.

The method of apportionment originally developed for this District was based on an assessment spread formula appropriate for the various land uses, identifiable property characteristics and improvements within the District and utilizes an assigned number of comparative dwelling units for residential, non-residential, and undeveloped properties.

The majority of parcels within the District are residential parcels and the improvements are maintained to provide a uniform benefit within the boundaries of the District. Therefore, each dwelling unit, whether an apartment or single family residence is given a base value of one (1) unit. Parcels in other land use categories were then evaluated and rated by comparison with the basic unit. The assignment of unit values is based primarily on the intensity of land use and its comparison to the base unit. Two unit values have been assigned: a residential efficiency unit, 500 square feet or less, at 50 percent of the residential unit value and a commercial efficiency unit defined at 1200 square feet per commercial charge.

Land Use Classifications

Every parcel within the District is assigned a land use classification based on available parcel information obtained from the County Assessor's Office. It has been determined that a parcel use and size are the appropriate factors necessary to identify and calculate the proportional special benefits conveyed to each property within the District for the cost of improvements associated with that property. The following are typical site land uses described in Title 12 of the Santa Maria Municipal Code and their proposed Assessment Units. This list includes the majority of parcel uses within the City of Santa Maria and is applied in the calculation of the 2026/2027 fiscal year assessments.

A summary of the applied Equivalent Benefit Units (EBUs) for the various land use classifications within the District is shown in the following table:

LAND USE	ASSESSMENT UNITS
Residential	
• Single Family Residential	1 Unit per property
• Two Family Residential	1 Unit per dwelling
• Condominium/Townhouse	1 Unit per dwelling
• Apartment Residential	1 Unit per dwelling
• Mobile Home Parks	1 Unit per dwelling
• Efficiency Unit	.5 Unit per dwelling
Commercial	
• Small, Single Tenant	1 Unit per property
• Efficiency Unit > 1,200 SF	1 Unit per 1,200 SF
• Vacant > 10,000 SF	1 Unit per property
• Commercial Centers	4 Units per property
• Major Shopping Centers	7 Units per property
Trade/Services	
• Commercial/Professional Office	1 Unit per property
• Vacant > 25,000 SF	1 Unit per property
• Mid-Size Office	4 Units per property
• Major Office Buildings	7 Units per property
• Hospital/Large Medical Offices	7 Units per property
Industrial	
• Small Industrial	1 Unit per property
• Vacant > 50,000 SF	1 Unit per property
• Medium Industrial	4 Units per property
• Major Industrial	7 Units per property
Exempt	
• Open Space/Common Areas, Public Facilities, Parks, Redevelopment Agency	0 Units per property

Part III – Estimate of Costs

The following budgets outline the estimated costs to maintain and service the various landscaping improvements described in this Report for Fiscal Year 2026/2027.

The budgeted expenses outlined in the following pages for the District and the Zones therein reflect the estimated annual expenses required to support and maintain the improvements to be provided for fiscal year 2026/2027. The estimated annual expenses provided in the budgets are considered to be appropriate full-service level costs. These full-service expenses, minus the general benefit expenses (Expenses not assessed and identified as the City's financial obligation to support the improvements) result in the amount of funding the property owners should reasonably be assessed to fully fund their proportional special benefit from the improvements to be maintained ("Special Benefit Expenses").

Annual Inflationary Adjustment (Assessment Range Formula)

Pursuant to Article XIIID of the California Constitution (Proposition 218), any "new or increased assessments" require certain noticing and balloting requirements. However, Government Code Section 54954.6(a) provides that a "new or increased assessment" does not include "an assessment which does not exceed an assessment formula or range of assessments...previously adopted by the agency or approved by the voters in the area where the assessment is imposed." This definition of a new or increased assessment is reaffirmed in the Proposition 218 Omnibus Implementation Act, Government Code Section 53753.5.

As previously adopted and approved by the City Council, each fiscal year the maximum assessment rates established for the improvements in the previous fiscal year for the District and each Zone may be adjusted by the percentage increase of the Local Consumer Price Index (CPI). The Consumer Price Index used for the inflationary adjustment shall be for the Los Angeles- Riverside-Orange County Area for All Urban Consumers, as developed by U.S. Bureau of Labor Statistics. The CPI used shall be as determined by the Bureau of Labor Statistics for a similar period of time.

Each fiscal year the City shall identify the annual percentage change in the CPI, using the difference over a 12-month period between the current year and of the previous year as of January of each succeeding year. This percentage difference shall then establish the range of increase to the maximum assessment rates allowed. If the percentage change in the CPI is negative, the maximum assessment rates shall not be adjusted from the previous fiscal year (unchanged). Should the Bureau of Labor Statistics revise such index or discontinue the preparation of such index, the City may use the revised index or comparable system as approved by the City Council for determining fluctuations in the cost of living.

The percentage change in CPI from December 2024 to December 2025 as reported by the U.S. Bureau of Labor Statistics was 3 percent. Therefore, the maximum assessment rates for fiscal year 2026/2027 will be increased by 3 percent over the maximum assessment rates for fiscal year 2025/2026.

Part IV – District/Zone Diagrams

The following section contains a series of diagrams showing the boundaries of Santa Maria Landscape Maintenance Assessment District No. DS-11 and the Zones therein for Fiscal Year 2026/2027. In addition to depicting the boundaries of the Zones, the diagrams also provide a visual depiction of the general location of the improvement areas being funded and maintained within the District and Zones. All parcels that will receive a special benefit from the improvements provided within the District and each respective Zone consist of the lots, parcels and subdivisions of land within the boundaries of the District and/or Zones as depicted by these diagrams and the lines and dimensions of those lots, parcels and subdivisions of land shall be those lines and dimensions shown on the Santa Barbara County Assessor's parcel maps for the current fiscal year and by reference the Santa Barbara County Assessor's parcel maps are incorporated herein and made part of this Report. These diagrams along with the Assessment Roll incorporated in Part V of this Report constitute the District Assessment Diagram for Fiscal Year 2026/2027.

Part V - Assessment Rolls

Due to the number of parcels in the District, the Assessment Roll for fiscal year 2026/2027 (a listing of the parcels to be assessed within this District along with the assessment amounts) has been filed with the City Clerk in an electronic format and is, by reference, made part of this Report. The proposed Assessment Roll shall be available for public inspection in the City Clerk's Office during normal office hours.

The Assessment Roll identified the parcels within the District that are assessed for special benefits and their corresponding assessment amount(s) for fiscal year 2026/2027. Each parcel listed on the Assessment Roll is currently shown and illustrated on the County Assessor's Roll and the County Assessor's Parcel Number Maps (APN maps). These records are, by reference, made part of this Report and shall govern for all details concerning the description of the lots or parcels. All assessments presented on the assessment roll are subject to change as a result of parcel changes made by the County including parcel splits, parcel merges or development changes that occur prior to the County Assessor's Office securing the final roll and generating tax bills for fiscal year 2026/2027.

ENGINEER'S REPORT AFFIDAVIT

This Report and the enclosed descriptions, budgets, and diagram outline the proposed improvements and assessments for Landscape Maintenance Assessment District No. DS-6 in the City of Santa Maria for Fiscal Year 2026/2027, which includes each lot, parcel, and subdivision of land within said District, as the same existed at the time of the passage of the Resolution of Intention. Reference is hereby made to the Santa Barbara County Assessor's maps for a detailed description of the lines and dimensions of parcels within the District. The undersigned respectfully submits the enclosed Report as directed by the City Council.

Dated this 19th day of March, 2026.

INTRODUCTION

The City of Santa Maria ("City"), under the provisions of the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code ("1972 Act") and in accordance with the provisions of the California State Constitution, Article XIIID ("California Constitution") annually levies and collects special assessments for the City's maintenance assessment district designated as **Southeast South Miller Street and College Drive Landscape Maintenance Assessment District No. DS-6** (hereafter referred to as "District") to fund in whole or in part the maintenance and operation of landscaping improvements that provide special benefits to properties within the District.

The City Council on August 4, 1981, established the formation of the Southeast South Miller Street and South College Drive Landscape Maintenance District No. DS-6 for the purpose of financing the continued maintenance of the landscaping within the southeast quadrant of the City.

In accordance with the 1972 Act, the District also utilizes special benefit zones ("Zones") to address variations in the nature, location, and extent of the improvements that provide special benefits to specific parcels and developments within the District. Within the boundaries of the District, some parcels may be assigned to a special benefit zone, each of which is associated with specific improvements that provide special benefit to properties within that Zone that are in addition to the improvements proportionally shared by properties throughout the District.

For Fiscal Year 2026/2027 in addition to the shared District improvements and assessments, parcels within the following Zones may be assessed for local improvements specific to the parcels and developments within each respective Zone:

- Crossroads Commercial Special Benefit Zone,
- Crossroads Residential Special Benefit Zone,
- Bradley Square Special Benefit Zone,
- Enos Ranch Commercial Special Benefit Zone,
- Enos Ranch Residential Special Benefit Zone,

Report Content and Annual Proceedings

This Engineer's Annual Report (the "Report") has been prepared pursuant to Chapter 1, Article 4 and Chapter 3 of the 1972 Act, and presented to the City Council for their consideration and approval of the proposed improvements and services to be provided within the District and the levy and collection of annual assessments related thereto for Fiscal Year 2026/2027. This Report outlines the District improvements, the special benefit zones, the method of apportionment, and proposed assessments to be levied in connection with the special benefits the properties will receive from the maintenance and servicing of the District improvements for Fiscal Year 2026/2027. The annual assessments to be levied on properties within the District provide a source of funding to fund in whole or in part, the continued

operation and maintenance of the landscaping improvements and services to be provided by the District for the properties within the District and specified Zones for which the properties receive special benefits.

Each fiscal year, the City establishes the District's assessments based on an estimate of the costs to maintain, operate and service the authorized District improvements and based upon available revenues including assessment revenues, fund balances, general benefit contributions and any additional City contributions from available sources. The costs of the improvements and the proposed annual assessments budgeted and assessed against properties within the District may include, but are not limited to the estimated expenditures for regular annual maintenance and repairs; incidental expenditures related to the operation and administration of the District; deficits or surpluses from prior years; revenues from other sources; and the collection of funds for operational reserves and/or periodic repairs, replacements and rehabilitation projects as authorized by the 1972 Act. The net annual cost to provide the improvements within the District plus each benefit Zone (if applicable) are allocated to the benefiting properties within the District and respective Zones as applicable, using a weighted method of apportionment (refer to Assessment Methodology in Section II, Method of Apportionment) that calculates the proportional special benefit and assessment for each parcel as compared to other properties that benefit from the District improvements and services. Thus, each parcel is assessed proportionately for only those improvements, services, and expenses for which the parcel will receive special benefit.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own Assessor's Parcel Number ("APN") by the Santa Barbara County Assessor's Office. The Santa Barbara County Auditor/Controller uses Assessor's Parcel Numbers and specific Fund Numbers to identify properties to be assessed on the tax roll for the District assessments.

At a noticed annual Public Hearing, the City Council will accept all public comments and written protests regarding the District and the annual levy of assessments. Based on those public comments and written protests, the City Council may order amendments to the Report or confirm the Report as submitted. Following final approval of the Report and confirmation of the assessments, the City Council will by Resolution, order the improvements to be made and confirm the levy and collection of assessments for Fiscal Year 2026/2027 pursuant to the 1972 Act. The assessments as approved will be submitted to the Santa Barbara County Auditor/Controller to be included on the property tax roll for each parcel.

As required by the 1972 Act, this Engineer's Report describes the improvements to be provided, maintained, and serviced by the District, an estimated budget for the District improvements, and the proposed assessments to be levied upon each assessable lot or parcel within the District for fiscal year 2026/2027.

Part I – Plans and Specifications: This section contains a general description of the District, special benefit zones ("Zones"), and the improvements and services that provide special benefits to the parcels within the District. The improvements, appurtenant facilities, and services that provide special benefits to the properties within the District and for which parcels are assessed may include, but not limited to the installation and maintenance of landscaping improvements within the public right-of-way of streets within

the District, retention basins, parks, public facilities and related amenities as well as associated operational and incidental expenses, and the collection of fund balances authorized by the 1972 Act. The plans and specifications contained in this Report generally describe the nature and extent of the improvements. In conjunction with these general descriptions, a visual depiction of the improvements may be provided in the District Diagrams contained in Part IV of this Report. More detailed information regarding the specific plans and specifications associated with the District improvements and Zone improvements are on file in the City Engineer's Office and by reference are made part of this Report.

Part II – Method of Apportionment: This section includes a discussion of the special and general benefits associated with the improvements to be provided within the District (Benefit Analysis). This section of the Report also outlines the basis upon which the estimated costs to provide such improvements has been apportioned to each parcel of land therein in proportion to the special benefits to be received. (the method of calculating each property's proportional special benefit assessment). This method of apportionment is consistent with the previously approved and adopted method of apportionment for the District.

Part III – Estimate of Costs: Identifies the estimated annual funding costs (Budgets) required for the maintenance and operation of the improvements in the District and Zones authorized by the 1972 Act and deemed appropriate to support the improvements, including, but not limited to, annual maintenance and service expenses, utility costs, and related incidental expenses. For fiscal year 2026/2027 annual contract maintenance costs have increased by three percent (3%). Those improvements and/or costs determined to be of general benefit shall be funded by a City contribution. In addition to the general benefit costs, the City may provide additional funding to support the maintenance and operation of the improvements considered to be of special benefit, but City staff shall make the determination of which improvements, and the extent of the services and activities that shall be provided based on available revenues.

This section also identifies and outlines an Assessment Range Formula (inflationary adjust) previously approved and adopted for the District assessments that provides for an annual adjustment to the maximum assessment rates, which establishes limits on future assessments, but also provides for reasonable cost adjustments due to inflation.

Part IV – District/Zone Diagrams: This section of the Report contains a series of diagrams showing the boundaries of the District and Zones for Fiscal Year 2026/2027 which incorporate the parcels determined to receive special benefits from the District improvements. These diagrams may also provide a visual depiction of the location of the improvements being maintained. The lines and dimensions of each lot, parcel, and subdivision of land contained in the District and Zone diagrams are inclusive of the parcels listed in "Part V - Assessment Roll" of this Report and the corresponding County Assessor's Parcel Maps for said parcels as they existed at the time this Report was prepared and shall incorporate all subsequent subdivisions, lot-line adjustments, or parcel changes therein. Reference is hereby made to the Santa

Barbara County Assessor's maps for a detailed description of the lines and dimensions of each lot and parcel of land within the District and Zones.

Part V – Assessment Roll: The assessment amounts to be levied and collected in fiscal year 2026/2027 for each parcel is based on the parcel's calculated proportional special benefit as outlined in "Part II - Method of Apportionment" and the annual assessment rates established by the estimated budgets in "Part III - Estimate of Costs" of this Report. Due to the number of parcels within the District, the Assessment Roll for fiscal year 2026/2027 has been filed electronically with the City Clerk rather than displayed in this Report and by reference the listing of the Assessor's Parcel Numbers and the corresponding assessment amounts are made part of this Report.

Note: If any section, subsection, sentence, clause, phrase, portion, zone, or subzone of this Engineer's Report is, for any reason, held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining provisions of this Engineer's Report and each section, subsection, subdivision, sentence, clause, phrase, portion, zone, or subzone thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, portions, zones, or subzones might subsequently be declared invalid or unconstitutional.

PART I – PLANS AND SPECIFICATIONS

The purpose of this District is to provide in part through annual assessments, funding for the installation, operation, and maintenance of landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins that control subdivision water runoff, parks, and easements.

As authorized by the 1972 Act, the improvements provided by the District and associated with each Zone therein may incorporate various local landscaping improvements and related amenities that were either installed in direct connection with the development of properties within the District and each respective Zone or were installed for the benefit of those properties resulting from property development or potential development of those properties and are considered necessary elements for the development of such properties to their full and best use and these improvements are maintained and serviced for the special benefit of real property within the District and/or Zones. The work to be performed within the District and each respective Zone may include but is not limited to (as applicable), the personnel, materials, equipment, electricity, water, contract services, repair and rehabilitation of the improvements and incidental expenses required to operate the District and provide the improvements and services.

Improvements provided within the District and/or Zone may include but are not limited to landscaping and related facilities and amenities located within designated street medians, parkway and streetscape side-panels, and entryways within the public right of ways or easements adjacent to public right of ways; and within public places including greenbelt areas, open spaces, and local parks within each respective Zone. These improvements may include, but are not limited to:

- various landscape materials such as trees, turf, shrubs, vines, ground cover, annual or perineal plantings;
- irrigation and drainage systems;
- structural amenities such as monuments, specialty or ornamental lighting, block walls, retaining walls, or other fencing associated with the landscape areas;
- hardscapes including mulch, decomposed granite surfaces, stamped concrete, and pavers;
- recreational amenities within parks or greenbelts that may include benches, play structures, picnic or other recreational facilities, signage, and related appurtenances.

The maintenance of these improvements may include, but is not limited to the regularly scheduled mowing, trimming, pruning, fertilization, pest control, weed/graffiti abatement, and public safety; installation, removal, replacement and rehabilitation of the landscaping, repair or replacement of irrigation or landscape drainage systems; and repair or replacement of hardscape improvements including sidewalks and recreational amenities. The Recreation and Parks Office shall authorize and schedule such maintenance and servicing as needed and based on available District and/or Zone funding.

Reference is made to the plans and specifications currently on file at the City Engineer's Office relating to the design, recommended materials, and level of maintenance concerning the facilities to be maintained.

The plans show plant species, size, and their location. Specifications for the improvements comply with the Standard Specifications of the Public Works Department, the California Building Code, and the Recreation and Parks Department Landscape and Irrigation Standards. For Fiscal Year 2026/2027 the improvements maintained within the District and for which parcels receive special benefits include but is not limited to the following:

SE LANDSCAPE MAINTENANCE DISTRICT No. DS-6	TOTAL SQFT.
Miller Medians – all medians south of Stowell Road	48,441
Lincoln Oaks – 1400 to 1500 South Miller on west side going south on Miller Street	98,885
Arbor Ridge – 1500 South Miller on west side going south on Miller Street to Battles Road	13,649
Newlove Frontage – South Miller east and west side from Battles to Newlove Lane and behind fence	41,040
Las Palmas – 1800 South Miller on west side going south on Miller Street from south of Newlove to corner of Inger Street	10,821
Driftwood Gardens – 1400 and 1500 South Miller easements and vines on Battles	21,576
Driftwood Gardens Basin—at Enos and Miller	72,071
Driftwood Meadows – 1800 and 1900 South Miller easements from Inger to Daniels on east side of Miller Street and basin on Inger	26,664
Driftwood Meadows Basin—at Inger and Miller	53,800
Celebration—1900 South Miller easements from Inger to Daniels on west side of Miller Street	1,460
First Christian Church – 1500 South College median by cemetery	6,731
Toys R Us & Edwards – 1400 to 1500 South Bradley medians	7,650
East Betteravia Medians – east of Broadway to Miller Street and east of Miller Street to end of Government Buildings, does not include Crossroads	13,989
Food 4 Less/Lucky Medians – 2400 block South Broadway	7,000
Casa Bonita – 2200 South Miller easements and Centerpoint easements (vines on walls)	9,217
Harvest Ranch – San Ysidro and Miller Street frontages, medians on Capistrano and bike path off La Purisima	12,490
Harvest Ranch Basin—at San Ysidro and Miller Streets	6,009
Toby Villas Basin—2500 South Miller	48,889
Toby Ranch – 2300 South Miller easement and East McCoy to end of street	59,454
Los Cabos (Rancho San Ysidro) – 2500 South Miller easements, vines located on San Ysidro from Miller Street going east bound to end of road and on San Ysidro	13,304
Los Cabos Basin—at McCoy and Miller	68,013
Knightbridge – 2500 South Miller easement, west-side of Miller Street	25,096
Santa Maria Way and South Miller Medians – intersection medians	10,252
Rolling Hills – 3100 Santa Maria Way easements and medians, small and large basins on Dauphin Street No mowing/edging	37,914

Rolling Hills Basins-Two basins along Santa Maria Way	11,436
Sunrise Hills – easements on both north and south sides of Sunrise Drive east of Maramonte Park, medians on South College Street south of Sunrise Drive to McCloud Street and easement on both east and west sides of South College Street from Sunrise Drive to McCloud Street	137,203
Battles Bike Path	115,554
New Love Extension	4,520
Arborwalk – frontage on Miller north of McCoy Lane	23,356
Mission Creek median – Santa Maria Way south of Sunrise Drive	2,030
Betteravia Business Plaza – Daniel Street and Betteravia past the commercial	7,581
Oak Creek Condos – frontage on Miller	8,063
South Broadway Medians – south of Stowell to Betteravia	34,387
South College median north of Santa Maria Way—Paved median	3,762
Skyview Estates Enhanced Area	41,100
Centennial Square	7,687
Total Southeast Landscape Maintenance District No. DS-6	**1,111,094**

Zones of Benefit

In accordance with the 1972 Act, this District utilizes Zones to address variations in the nature, location, and extent of improvements that provide special benefits to specific parcels and developments within the District. Each Zone is associated with specific improvements and/or types of improvements that provide special benefit to properties within that Zone.

For Fiscal Year 2026/2027 the District includes five (5) designated Zones. The boundaries of each Zone are based on the improvements to be maintained and the relationship and proximity of the developments and properties that derive special benefits from those specific improvements. The following is a brief description and summary of the improvements associated within each Zone and for which parcels receive special benefits:

Crossroads Commercial Special Benefit Zone

Improvements associated with the Crossroads Commercial Special Benefit Zone include the public landscape easements that include medians on East Betteravia (east of government buildings), the medians on College, and the medians on Bradley; the roundabouts on College and Bradley (estimated 115,180 square feet); the Crossroads Bike Path (estimated 43,141 square feet); Crossroads Basin at College and Southside (estimated 366,187 square feet); Parcel 27 basin bottom (estimated 46,154 square feet); and Betteravia Road off-ramps at Highway 101 (estimated 95,105 square feet); collectively totaling an estimated 37,238 square feet of improvements that includes the maintenance of street trees and recreational elements within the drainage basins.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Crossroads Commercial Special Benefit Zone Assessment for fiscal year 2026/2027 will be $252,860.24 calculated based on the proportionate area each parcel occupies within the special benefit zone. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Crossroads Commercial parcels are also assessed the South Miller Street/South College Drive (Southeast) Landscape Maintenance District commercial assessment of $586.30 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

Crossroads Residential Special Benefit Zone

The Crossroads Cottages I and II and the Crossroads Estates subdivisions comprise the Crossroads Residential Special Benefit Zone. Improvements associated with the Crossroads Residential Special Benefit Zone include an estimated 94,117 square feet of landscaped easements, landscaped drainage swale, landscaped bike trail, landscaped park sites, and specialty lighting.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Zone Assessment for fiscal year 2026/2027 will be $534.27 per assessment unit or tenant space. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over and above general benefits provided to other parcels located in the District.

Crossroads Residential parcels are also assessed the South Miller Street/South College Drive (Southeast) Landscape Maintenance District residential assessment of $144.58 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

Bradley Square Special Benefit Zone

Improvements associated with the Bradley Square Special Benefit Zone include the roundabout at McCoy and College; the roundabout at Bradley and McCoy; the frontage along McCoy Lane up to the proposed on-ramp; the frontage landscaping along Crossroads Lane, Bradley Road, College to Sunrise, San Ysidro, and Lewis Road; the medians on College; Fire Station 4 landscaping; park frontage along Hawkins, Leahy and Forbes, Leo Trujillo area and entire MPT adjacent to 101. Collectively, these improvement areas total an estimated 350,028 square feet.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Bradley Square Special Benefit Zone Assessment for fiscal year 2026/2027 will be $350.01 per assessor parcel number or tenant space. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Bradley Square Special Benefit Zone parcels are also assessed the South Miller Street/South College Drive (Southeast) Landscape Maintenance District residential assessment of $144.58 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

Enos Ranch Special Benefit Zone (Commercial and Residential)

Collectively the Enos Ranch Commercial Special Benefit Zone and Enos Ranch Residential Special Benefit Zone benefit from the maintenance of improvements which provide special benefits to parcel with the zone(s) which may include but is not limited to the public landscape easements on Betteravia Road medians and north side, Bradley Rd and College from Betteravia to Battles including medians, both sides of Meehan and Shepard, the south side of Battles along the bike path, the pedestrian path from Inger to College and areas along the Southbound Hwy. 101 offramp(estimated 277,197 square feet); Enos Ranch basin and adjacent landscaped slope(estimated 140,804 square feet). Collectively, the Enos Ranch improvements total an estimated 418,001 square feet. Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration.

- **Enos Ranch Commercial Special Benefit Zone:** Many retail businesses, restaurants, and car dealerships comprise this Special Benefit Zone. The Enos Ranch Special Benefit Zone accounts for costs to maintain improvements which provide special benefits to parcels within the zone. The Enos Ranch Commercial Special Benefit Zone Assessment for fiscal year 2026/2027 will be $184,646 calculated based on the proportionate area each parcel occupies within the special benefit zone. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over and above general benefits provided to other parcels located in the District.

  The Enos Ranch parcels are also assessed the South Miller Street/South College Drive (Southeast) Landscape Maintenance District commercial assessment of $586.30 per APN or tenant space as detailed in Method of Apportionment provided in Part II of this Report.

- **Enos Ranch Residential Special Benefit Zone:** The Easton Apartments comprise this residential Special Benefit Zone. The Enos Ranch Special Benefit Zone accounts for costs to maintain improvements which provide special benefits to parcels within the zone. Improvements associated with this Special Benefit Zone include the signature ten foot landscaped parkways, tree lined roadways, landscaped medians, and the historic Smith-Enos House and park site.

  The Enos Ranch Residential Special Benefit Zone Assessment for fiscal year 2026/2027 will be $212.38 per assessor parcel number or tenant space. This Zone assessment is imposed only upon parcels within the Zone that receive a special benefit over and above general benefits provided to other parcels located in the District.

The Enos Ranch parcels are also assessed the South Miller Street/South College Drive (Southeast) Landscape Maintenance District residential tenant space assessment of $144.58 per residential unit as detailed in Method of Apportionment provided in Part II of this Report.

Skyview Estates Enhanced Area

The Skyview Estates Enhanced Area comprises the Northman Residential subdivision. Improvements associated with the Skyview Estates Enhanced Area include an estimated 41,100 square feet of landscaped medians, landscaped drainage swale, landscaped frontage, and landscaped park site.

Maintenance costs include labor, equipment, plant materials and supplies, graffiti removal, renovation, utility costs, public safety, and District administration. The Area Assessment for fiscal year 2026/2027 will be $538.03 per assessment unit or tenant space. This Area assessment is imposed only upon parcels within the Area that receive a special benefit over and above general benefits provided to other parcels located in the District.

Skyview Estates Enhanced Area parcels are also assessed the South Miller Street/South College Drive (Southeast) Landscape Maintenance District residential assessment of $144.58 per assessment unit as detailed in Method of Apportionment provided in Part II of this Report.

Note: A visual depiction of the general location of the landscape improvement areas for the District and Zone boundaries are provided on the District Diagrams provided in Part IV of this Report.

Part II – Method of Apportionment

Legislative Requirements for Assessments

The estimated costs to provide the proposed improvements for Fiscal Year 2026/2027 have been identified and allocated to properties within the District and the Zones therein based on special benefit, consistent with the requirements of the 1972 Act and the assessment provisions of Proposition 218 (being contained in Article XIII D of the California Constitution). The improvements provided by this District and for which properties are assessed are identified as local landscaping improvements in specified parkways, medians, and roundabouts in the public right-of-way including street trees, and landscaping within specified public areas and public facilities including storm water retention basins, parks, easements, and related amenities. The formulas used for calculating assessments and the designation of Zones herein reflect the composition of parcels within the District and the improvements and activities to be provided and have been designed to fairly apportion the cost of providing the improvements based on a determination of the proportional special benefits to each parcel.

Provisions of the 1972 Act

The 1972 Act permits the establishment of assessment districts by agencies for the purpose of providing certain public improvements, including the acquisition, construction, installation and servicing of landscape improvements and related facilities. The 1972 Act requires that the cost of these improvements be levied according to benefit rather than assessed value:

> Section 22573 defines the net amount to be assessed as follows:
>
> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements."*
>
> Section 22574 provides for zones as follows:
>
> *"The diagram and assessment may classify various areas within an assessment district into different zones where, by reason of variations in the nature, location, and extent of the improvements, the various areas will receive differing degrees of benefit from the improvements. A zone shall consist of all territory which will receive substantially the same degree of benefit from the improvements."*

Provisions of the California Constitution

In addition to the provisions of the 1972 Act, the Article XIII D of the California Constitution outlines specific requirements regarding assessments including the following:

> Article XIII D Section 2d defines District as follows:
>
> *"District means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service";*
>
> Article XIII D Section 2i defines Special Benefit as follows:
>
> *"Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit. "*Article XIII D Section 4a defines proportional special benefit assessments as follows:
>
> *"An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."*

Benefit Analysis

Special Benefits

The ongoing maintenance of landscaped areas within the District as addressed in this Report, provide aesthetic benefits to the properties and a more pleasant environment to walk, drive, live, and/or work. The primary function of these landscape improvements and related amenities is to serve as an aesthetically pleasing enhancement and green space for the benefit of the immediately surrounding properties and developments for which the improvements were constructed and installed and/or were facilitated by the development or potential development of properties within the District and each respective Zone. In addition, the District provided landscaping improvements are an integral part of the physical environment associated with the parcels in the District and/or respective Zones and the proportional direct effect that trees, shrubs, and groundcover have on real property within the district including localized wind reduction; erosion control; storm water capture; noise attenuation; visual screening; ultraviolet light and glare reduction; and odor reduction are a direct and particular benefit to the properties in proximity to those improvements.

While some of the improvements may in part be visible to properties outside the District or Zone, collectively if these various improvements are not properly maintained, it is the parcels within the District and/or respective Zone (as may be applicable), that would be aesthetically burdened or environmentally impacted. Additionally, much of the landscaping within the street right-of-way serve as both a physical buffer as well as a sound reduction buffer between the roadways and the properties in the District and serve as a pleasant aesthetic amenity that enhances the approach to the parcels.

General Benefit

In reviewing the location and extent of the specific landscaped areas and improvements to be funded by District assessments and the proximity and relationship to properties to be assessed it is evident these improvements were primarily installed in connection with the development of properties therein or are improvements that would otherwise be shared by and required for development of properties in the District or Zone. It is also evident that the maintenance these improvements and the level of maintenance provided has a direct and particular impact (special benefit) only to those properties in proximity to those improvements and such maintenance beyond that which is required to ensure the safety and protection of the general public and property in general, has no direct quantifiable benefit to the public at large or properties outside the District and/or Zones.

In the absence of a special funding District or Zones, the City would typically be obligated to provide only limited (as needed) tree management, weed abatement, rodent control, and erosion control services for the landscape areas currently maintained within the District. This baseline level of service (general benefit level of service) would most likely provide for periodic servicing of the improvement areas on an as-needed basis to ensure public safety and essential property protection to avoid negative impacts on adjacent roadways and vehicles traveling on those roadways, and potential property damage resulting from erosion or fire hazards. However, this baseline level of service would clearly result in a far less visually pleasing environment than is created with the enhanced levels of services associated with the regular

landscape maintenance provided in the District and funded by the special benefit assessments In addition to the baseline level of service general benefit, it is recognized that there are indirect or incidental general benefits to properties within the District as well as the general public that are associated with regular landscape maintenance services associated with the districtwide improvements, including minimization of dust and debris, and air pollution reduction.

Although these types of benefits might best be characterized as indirect consequences of the special benefit of the landscape maintenance provided to parcels served by the District, for the purposes of this Report we assume these types of benefits to be general benefits, albeit general benefits that are extremely difficult to quantify. Therefore, on behalf of all parcels not assessed by a landscape maintenance district, yet deriving some level of general benefit from the District's landscaped improvements, the City has historically and will continue to contribute from the general fund a General Benefit Contribution that equals or exceeds the costs attributable to the baseline general benefit costs and indirect/incidental general benefit costs for the districtwide shared improvement areas as shown in the Estimate of Costs (Part III of this Report) as the "City General Benefit Contribution".

Assessment Methodology

To assess benefits equitably it is necessary to calculate each property's proportional share of the special benefits conferred by the funded improvements and service. The method utilized to determine assessments is called the "method of apportionment" or formula of cost spread ("spread formula"). Assessment Units ("AU"), often referred to as the Equivalent Benefit Unit (EBU) method of assessment apportionment is utilized for this District and establishes a basic unit (base value) of benefit and then calculates the benefit derived by each assessed parcel as a multiple (or a fraction) of that basic unit. The AU or EBU method of apportioning special benefits is typically seen as the most appropriate and equitable assessment methodology for districts formed under the 1972 Act, as the benefit to each parcel from the improvements are apportioned as a function of comparable property characteristics which may include but is not limited to land use and property size.

The method of apportionment originally developed for this District was based on an assessment spread formula appropriate for the various land uses, identifiable property characteristics and improvements within the District and utilizes an assigned number of comparative dwelling units for residential, non-residential, and undeveloped properties.

The majority of parcels within the District are residential parcels and the improvements are maintained to provide a uniform benefit within the boundaries of the District. Therefore, each dwelling unit, whether an apartment or single family residence is given a base value of one (1) unit. Parcels in other land use categories were then evaluated and rated by comparison with the basic unit. The assignment of unit values is based primarily on the intensity of land use and its comparison to the base unit. Two unit values have been assigned: a residential efficiency unit, 500 square feet or less, at 50 percent of the residential unit value and a commercial efficiency unit defined at 1200 square feet per commercial charge.

Land Use Classifications

Every parcel within the District is assigned a land use classification based on available parcel information obtained from the County Assessor's Office. It has been determined that a parcel use and size are the appropriate factors necessary to identify and calculate the proportional special benefits conveyed to each property within the District for the cost of improvements associated with that property. The following are typical site land uses described in Title 12 of the Santa Maria Municipal Code and their proposed Assessment Units. This list includes the majority of parcel uses within the City of Santa Maria and is applied in the calculation of the 2026/2027 fiscal year assessments.

A summary of the applied Equivalent Benefit Units (EBUs) for the various land use classifications within the District is shown in the following table:

LAND USE	ASSESSMENT UNITS
Residential	
• Single Family Residential	1 Unit per property
• Two Family Residential	1 Unit per dwelling
• Condominium/Townhouse	1 Unit per dwelling
• Apartment Residential	1 Unit per dwelling
• Mobile Home Parks	1 Unit per dwelling
• Efficiency Unit	.5 Unit per dwelling
Commercial	
• Small, Single Tenant	1 Unit per property
• Efficiency Unit > 1,200 SF	1 Unit per 1,200 SF
• Vacant > 10,000 SF	1 Unit per property
• Commercial Centers	4 Units per property
• Major Shopping Centers	7 Units per property
Trade/Services	
• Commercial/Professional Office	1 Unit per property
• Vacant > 25,000 SF	1 Unit per property
• Mid-Size Office	4 Units per property
• Major Office Buildings	7 Units per property
• Hospital/Large Medical Offices	7 Units per property
Industrial	
• Small Industrial	1 Unit per property
• Vacant > 50,000 SF	1 Unit per property
• Medium Industrial	4 Units per property
• Major Industrial	7 Units per property
Exempt	
• Open Space/Common Areas, Public Facilities, Parks, Redevelopment Agency	0 Units per property

Part III – Estimate of Costs

The following budgets outline the estimated costs to maintain and service the various landscaping improvements described in this Report for Fiscal Year 2026/2027.

The budgeted expenses outlined in the following pages for the District and the Zones therein reflect the estimated annual expenses required to support and maintain the improvements to be provided for fiscal year 2026/2027. The estimated annual expenses provided in the budgets are considered to be appropriate full-service level costs. These full-service expenses, minus the general benefit expenses (Expenses not assessed and identified as the City's financial obligation to support the improvements) result in the amount of funding the property owners should reasonably be assessed to fully fund their proportional special benefit from the improvements to be maintained ("Special Benefit Expenses").

CITY OF SANTA MARIA
SOUTHEAST LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. DS-11

ESTIMATED BUDGET

	2025/2026	2026/2027
ESTIMATED EXPENDITURES

Annual Inflationary Adjustment (Assessment Range Formula)

Pursuant to Article XIIID of the California Constitution (Proposition 218), any "new or increased assessments" require certain noticing and balloting requirements. However, Government Code Section 54954.6(a) provides that a "new or increased assessment" does not include "an assessment which does not exceed an assessment formula or range of assessments...previously adopted by the agency or approved by the voters in the area where the assessment is imposed." This definition of a new or increased assessment is reaffirmed in the Proposition 218 Omnibus Implementation Act, Government Code Section 53753.5.

As previously adopted and approved by the City Council, each fiscal year the maximum assessment rates established for the improvements in the previous fiscal year for the District and each Zone may be adjusted by the percentage increase of the Local Consumer Price Index (CPI). The Consumer Price Index used for the inflationary adjustment shall be for the Los Angeles- Riverside-Orange County Area for All Urban Consumers, as developed by U.S. Bureau of Labor Statistics. The CPI used shall be as determined by the Bureau of Labor Statistics for a similar period of time.

Each fiscal year the City shall identify the annual percentage change in the CPI, using the difference over a 12-month period between the current year and of the previous year as of January of each succeeding year. This percentage difference shall then establish the range of increase to the maximum assessment rates allowed. If the percentage change in the CPI is negative, the maximum assessment rates shall not be adjusted from the previous fiscal year (unchanged). Should the Bureau of Labor Statistics revise such index or discontinue the preparation of such index, the City may use the revised index or comparable system as approved by the City Council for determining fluctuations in the cost of living.

The percentage change in CPI from December 2024 to December 2025 as reported by the U.S. Bureau of Labor Statistics was 3 percent. Therefore, the maximum assessment rates for fiscal year 2026/2027 will be increased by 3 percent over the maximum assessment rates for fiscal year 2025/2026.

Part IV – District/Zone Diagrams

The following section contains a series of diagrams showing the boundaries of Santa Maria Landscape Maintenance Assessment District No. DS-6 and the Zones therein for Fiscal Year 2026/2027. In addition to depicting the boundaries of the Zones, the diagrams also provide a visual depiction of the general location of the improvement areas being funded and maintained within the District and Zones. All parcels that will receive a special benefit from the improvements provided within the District and each respective Zone consist of the lots, parcels and subdivisions of land within the boundaries of the District and/or Zones as depicted by these diagrams and the lines and dimensions of those lots, parcels and subdivisions of land shall be those lines and dimensions shown on the Santa Barbara County Assessor's parcel maps for the current fiscal year and by reference the Santa Barbara County Assessor's parcel maps are incorporated herein and made part of this Report. These diagrams along with the Assessment Roll incorporated in Part V of this Report constitute the District Assessment Diagram for Fiscal Year 2026/2027.

Part V - Assessment Rolls

Due to the number of parcels in the District, the Assessment Roll for fiscal year 2026/2027 (a listing of the parcels to be assessed within this District along with the assessment amounts) has been filed with the City Clerk in an electronic format and is, by reference, made part of this Report. The proposed Assessment Roll shall be available for public inspection in the City Clerk's Office during normal office hours.

The Assessment Roll identified the parcels within the District that are assessed for special benefits and their corresponding assessment amount(s) for fiscal year 2026/2027. Each parcel listed on the Assessment Roll is currently shown and illustrated on the County Assessor's Roll and the County Assessor's Parcel Number Maps (APN maps). These records are, by reference, made part of this Report and shall govern for all details concerning the description of the lots or parcels. All assessments presented on the assessment roll are subject to change as a result of parcel changes made by the County including parcel splits, parcel merges or development changes that occur prior to the County Assessor's Office securing the final roll and generating tax bills for fiscal year 2026/2027.

COUNCIL AGENDA REPORT

TO: Mayor and City Council

FROM: Brett Fulgoni, Director of Public Works

DATE: May 5, 2026

SUBJECT: **Adoption of a Resolution Approving the Measure A Five-Year Local Program of Projects for Fiscal Year 2026/2027 through 2030/2031**

Description:
The City Council will consider adopting a Resolution approving the Measure A Five-Year Program of Projects for transportation and pedestrian enhancement projects within the City of Santa Maria.

Environmental Notice: The activity is not a "Project" as defined under Section 15378 of the California Environmental Quality Act State Guidelines; therefore, pursuant to State Guidelines Section 15060(c)(3) no environmental review is required.

RECOMMENDATION:

Adopt a Resolution approving the Measure A Five-Year Local Program of Projects for fiscal years 2026/2027 through 2030/2031; and certifying that the City of Santa Maria will provide sufficient funding in the 2026/2027 budget to meet the Measure A Maintenance of Effort requirement.

BACKGROUND:

In November 2008, Santa Barbara County voters approved the reauthorization of Measure D, an extension of the existing half-cent sales tax for transportation purposes, known as Measure A. Over its 30-year lifespan, Measure A will provide more than one billion in local sales tax revenues for transportation projects in Santa Barbara County. Specifically, it will provide approximately $455 million to Northern Santa Barbara County for high-priority transportation projects and programs to address the current and future needs of local communities.

Measure A funds are essential for the current and future maintenance needs of the City's roadways, transportation facilities, and overall infrastructure year after year.

DISCUSSION:

Section 18 of the Measure A ordinance requires each local jurisdiction to annually hold a public hearing to adopt a Five-Year Program of Projects (POP). This meeting serves that purpose. Once approved, all local POP are submitted to the Santa Barbara County Local Transportation Authority for approval.

The Five-Year Local POP (Attachment B) proposes projects that comply with the requirements of the Measure A ordinance. The Measure A project list for the current cycle allocates funds to local streets and transportation improvements.

Measure A requires the City to allocate 15 percent of its local share of Measure A funding to pedestrian and bicycle improvements, classified as "Alternate Transportation" Improvements. The Measure A program is divided into five-year segments with regard to Alternate Transportation, and the ordinance requires that the 15 percent requirement for Alternate Transportation expenditures be met completely over each five-year period.

The primary focus of the POP is the maintenance of the existing infrastructure within the City's rights-of-way. Other transportation funding sources, such as Gas Tax, SB1, LSTP (Local Surface Transportation Program), Growth Mitigation, and other grant programs are available for capital expenditures through the normal budget process.

Maintenance of Effort

A Maintenance of Effort (MOE) is a common requirement of special tax measures. MOE is a taxpayer safeguard used to assure that new special tax revenues are not used to supplant historical discretionary funding levels. The MOE requirement is meant to maintain existing funding levels so that the new tax revenues will improve public infrastructure or services above current levels.

The Measure A ordinance contains an MOE requirement that identifies the minimum amount of local discretionary funding for local streets and roads. The MOE requirements were established based on the City of Santa Maria discretionary spending reported during Year One, Fiscal Year 2010-11, of the Measure A Program. This amount has increased incrementally over the lifetime of the program. The MOE requirement for FY 2025/2026 is estimated to be $4,315,119 and will likely grow in FY 2026/2027. The MOE requirement is satisfied by a combination of utilities funding, gas tax, and in-kind sources.

The Resolution contains a certification required by the Measure A ordinance. The City is required to certify that the City budget includes an amount of local discretionary funding to comply with the MOE requirements. The proposed City of Santa Maria 2026-28 budget shall include sufficient discretionary funding to meet the estimated MOE requirement.

Alternative(s)

The recommended action is to approve the Resolution approving the five-year Measure A POP. The alternative to the recommended action would be for the City Council to direct staff to make changes to the POP and bring the item back to the City Council for approval. This would result in a delay in submitting the approved POP to SBCAG, which could delay the City's funding.

Fiscal Considerations

This action is expected to bring about $7.6 million to the City of Santa Maria in FY 2026/2027 and a projected total of about $40 million over the next five years. Attachment

B shows “Measure A Revenue Estimates from Santa Barbara County Association of Government (SBCAG)” by year in the second row of the table under “Revenues.” This does not include carryovers from the fund balance. The City must adopt a Resolution approving the Measure A Five-Year Local POP and certify the MOE requirement to secure this funding.

Impact on the Community

The Measure A Local POP will have a beneficial impact on the community by directing available Measure A revenues to the maintenance of the City’s transportation infrastructure. This network of roadways, sidewalks, streetlights, traffic signals, drainage systems, and landscaping serves every resident of the community daily. The maintenance and operation of this system are of critical importance to nearly every aspect of the health of the community’s infrastructure.

C. SBCAG TTAC Staff Reports

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SANTA MARIA, CALIFORNIA APPROVING THE MEASURE A FIVE-YEAR LOCAL PROGRAM OF PROJECTS FOR FISCAL YEARS 2026/2027 THROUGH 2030/2031; AND CERTIFYING THAT THE CITY OF SANTA MARIA WILL PROVIDE SUFFICIENT FUNDING IN THE 2026/2027 BUDGET TO MEET THE MEASURE A MAINTENANCE OF EFFORT REQUIREMENT

WHEREAS, on November 4, 2008, the voters of Santa Barbara County approved Ordinance No. 5, the Road Repair, Traffic Relief, and Transportation Safety Measure, known as Measure A; and

WHEREAS, the City of Santa Maria held a public hearing per Section 18 of the Ordinance; and

WHEREAS, the Ordinance provides that the Santa Barbara County Local Transportation Authority shall annually approve a Program of Projects (POP) submitted by local jurisdictions identifying those transportation projects eligible to use Measure A funds during the succeeding five-year period; and

WHEREAS, the City of Santa Maria was provided with an estimate of annual Measure A local revenues for 2026/2027 through 2030/2031 to develop a local POP.

NOW, THEREFORE, IT IS HEREBY RESOLVED by the City Council of the City of Santa Maria, California, as follows:

SECTION 1. The City Council approves the Five-Year POP to be funded in part with Measure A revenues; and

SECTION 2. The City of Santa Maria certifies that it will include in its budget an amount of local discretionary funding for local streets and roads sufficient to comply with Maintenance of Effort requirements contained in Section 27 of the Ordinance; and

SECTION 3. The City of Santa Maria has complied with all other applicable provisions and requirements of the Ordinance; and

SECTION 4. The Chief Deputy City Clerk is hereby authorized to make minor changes herein to address clerical errors, so long as substantial conformance of the intent of this document is maintained. In doing so, the Chief Deputy City Clerk shall consult with the City Manager and City Attorney concerning any changes deemed necessary.

SBCAG
SANTA BARBARA COUNTY ASSOCIATION OF GOVERNMENTS

STAFF REPORT
Board of Directors

MEETING DATE: February 19, 2026

STAFF CONTACT: Jacky Mata, SBCAG

SUBJECT: FINAL MEASURE A REVENUE ESTIMATES FOR FISCAL YEARS 26/27 TO 30/31

ATTACHMENTS:
Attachment 1 - Measure D and Measure A Revenues
Attachment 2 - Development Schedule
Attachment 3 - Measure A Local POP Submittal Form - FY 26-27
Attachment 4 Final FY 26-27 revenue estimates Tables 1-5

RECOMMENDATION:
Approve the final Measure A revenue estimates for Fiscal Years 2026/27 to 2030/31.

DISCUSSION:
As the Local Transportation Authority, SBCAG allocates Measure A transportation sales tax revenues in accordance with the voter-approved ordinance and investment plan. Integral to this responsibility, SBCAG staff prepares five-year revenue estimates annually before the development of the Measure A Program of Projects (POP), which the SBCAG Board will adopt in May. The attached tables provide draft projected revenues for Fiscal Year (FY) 2026/27 to FY 2030/31.

The revenue estimates reflect the actual repayment amount of the (Transportation Infrastructure Finance and Innovation Act (TIFIA) loan to accommodate the construction of the U.S. 101 HOV Phase 4 project. This TIFIA loan issuance will impact the overall program. While the loan was approved for $75 million, SBCAG drew down approximately $50 million, reducing the debt service amounts for Measure A.

The estimates allow local agencies to prepare their Measure A Programs of Projects. SBCAG is responsible for preparing the Authority Program of Projects in coordination with the Santa Barbara Metropolitan Transit District (SBMTD). The Measure A Revenue Estimates will be presented to the SBCAG Board of Directors as a draft in January 2026 and for approval in February 2026. **The Local Program of Projects will be due to SBCAG by March 31, 2026.** The draft Measure Staff will present a Program of Projects for review in May 2026 and for adoption by the Board in June 2026.

Attachment 4 includes the Estimates of Measure A allocations for the five years.

Table 1 – Five-Year Measure A Revenue Estimate
Table 1 presents the overall Measure A program revenue estimate for the five years. HdL, SBCAG's revenue analysis consultant, developed the FY 26/27 revenue projection, which is 2% higher than the FY 25/26 projection.

The 5-year revenue projections being presented take into consideration the following factors:

- **FY 26/27**: Following several years of below-trend growth after the extraordinary surges in FY 20/21 and 21/22, which satisfied several years of future demand, growth is expected to

experience moderate increases, assuming interest rates continue to decrease. As the economy continues to normalize and tariff impacts ease, growth is expected to return to a level closer to the long-term trend.

- **FY 27/28**: The auto and transportation markets are expected to contribute to renewed growth after years of market distortions. As inventory and financing rates become more favorable, with the hope of lower vehicle pricing, consumers will likely begin replacing vehicles that are now averaging 12.8 years old. Some changes to CEQA (California Environmental Quality Act) may help spur home building.
- **FY 28/29**: Business industrial development is projected to accelerate due to increased technological investments in automation, robotics, and artificial intelligence, as well as the electrification of the economy. These investments will be necessary to address emerging challenges and are expected to deliver robust returns. This period is forecast to see a faster increase in overall productivity compared to the post-2008 years, driving a cycle of improved growth.
- **FY 29/30**: Continued growth is expected as financial concerns with consumers and businesses lessen due to interest rate reductions and the finalization of all tariff discussions. Potential increases in building construction as homeowners begin to relieve the pent-up demand for home improvement projects, as pricing and interest rates help to raise the sector.
- **FY 30/31 and beyond**: This period represents a normal business cycle, which may include a recession or economic slowdown. The United States will face challenges such as high debt levels, expanding burdens from entitlement programs, and an aging workforce, with the birth rate below the replacement rate. However, advancements in artificial intelligence (AI), robotics, and other technological innovations, along with immigration, may help address these issues. These factors could help offset labor shortages and enhance productivity.

Table 1 shows the annual deductions for CDTFA administration costs, which are capped at 1.15%. In addition, the table includes a 1.0% gross revenue deduction for SBCAG administrative costs.

SBCAG was approved for a Federal TIFIA Loan by the Build America Bureau to provide financing for SBCAG's Measure A match for the SB1 Cycle 1 award for construction of the U.S. 101 HOV project. The loan was necessary to continue annual apportionments for the Local Street & Transportation Improvement and transit funding while constructing the HOV project segment(s). Debt service estimates are included in Table 1, which assumes a final TIFIA loan amount of $50 million, drawn down through FY 39/40.

Table 1 includes deductions off the top for consultant assistance, including ongoing consultation with the financial advisor, and TIFIA reporting assistance.

This table also includes the deduction for the annual Replica subscription. Replica is a planning tool that supports planning projects, public outreach, application development, and more. Following the September 2023 TTAC meeting, TTAC members agreed to fund a regionwide, ongoing subscription using off-the-top Measure A funds. Doing so would enable the region to retain access to Replica through the life of Measure A. To extend the current agreement, Replica offered a non-escalating fee of $96,000 annually through 2040 to cover all regional agencies. The cost would be approximately $500,000 annually if each agency subscribed individually.

New 'Off-the-Top' Expenditures for Measure A

In November 2025, SBCAG staff presented two new off-the-top expenditures for Measure A as part of the Fiscal Year 2026/27 Overall Work Program.

Measure A Renewal and Public Outreach Strategy

In preparation for the placement of the renewal measure on the ballot in 2032, SBCAG staff is proposing a set aside to develop the Measure A Renewal and Public Outreach Strategy beginning in FY 26/27. The document will outline the proposed milestones and the associated requirements to place the Measure A renewal on the ballot. The Strategy will include, but is not limited to:

- Assessment of lessons learned from Counties that have sought transportation sales tax measures
- Assessment of Measure A Ordinance, Investment Plan, and Progress Made
- Development of Schedule and Milestones
- Development of Measure A Stakeholder Survey
- Development of Public Outreach Strategy, including stakeholder committees
- Identifying Polling Needs
- Proposed schedule, steps, and components for the development of the Investment Plan (The Investment Plan will identify transportation needs, including projects and programs, and will be completed in 2030/31 in anticipation of the 2032 election)

Match for Development of Planning Studies and Project Lists

SBCAG staff is also proposing a new set aside for matching funds for transportation studies. The planning studies will support the development of a list of projects for the Measure A Extension Investment Plan over the next few years. SBCAG staff propose setting aside $200,000 for the local match for planning studies, with funding split evenly between North County and South County. If approved, the matches for the proposed Lompoc Valley Transportation Study would be funded from this fund for the City of Lompoc and the County of Santa Barbara. Staff is exploring the possibility of seeking funds for a South County study in the coming years. Additionally, should a reserve of these funds be established over time, it could be used to fund a study if a grant application is unsuccessful.

Finally, the table assumes that interest will be earned on the Measure A fund balance and allocated at the same percentages as the sales tax revenues.

Table 2A – North County and South Coast Annual Allocation

Table 2A lists the annual allocations to be made over the five years for programs in the North County and South Coast sub-programs. The investment plan specifies that the North County and South Coast programs receive 43.3% of the total measure revenues over 30 years. However, funding amounts for projects or programs within the sub-programs are reflected in the investment plan as estimated revenues in actual dollars over 30 years, not as percentages. Dollar amounts have been used to determine the annual percentages of sub-program revenue each will receive. The percentages shown are the same as last year's.

Table 2B – Highway 101 HOV Widening & Other Named Projects

The estimated revenues available for the South Coast Highway 101 HOV project and other "named" projects are reflected in Table 2B. The estimate is derived by deducting the North County and South Coast annual allocation total from the net revenues available for allocation in Table 1.

Table 3 – Local Street & Transportation Improvement Revenues

Table 3 derives the estimated North County and South Coast Local Street and Transportation Improvement revenues by jurisdiction within sub-regions using the LSTI estimate from Table 2A and population estimates from January 2025. The North County and South Coast unincorporated population split is based on the 2020 census. The investment plan specifies that each local agency on the South Coast will allocate a percentage of its gross LTSI to SBMTD for transit operations. These estimates are reflected in Table 3. The funds will be distributed directly to SBMTD in accordance with the investment plan. The table also shows the minimum percentage of LTSI funding and the corresponding dollar amount each local agency must expend on alternative transportation by the end of the five years, as required by the Investment Plan.

Table 4 – Specialized Transit for Elderly & Disabled

Table 4 reflects the estimated revenues for Easy Lift, the sole specialized transit service provider on the South Coast, and a revenue estimate for the North County based on population and paratransit ridership. Per the investment plan, transit operators and Consolidated Transportation Service Agencies are eligible recipients of this funding, intended to reduce fares charged to the elderly and disabled by covering the operating expenses of specialized services. Half of the annual North County Specialized Transit funding is allocated based on population, with a $5,000 base allocation to Guadalupe and SMOOTH, and the other half is allocated based on specialized transit ridership figures. Table 4 reflects population figures from the Department of Finance for January 2025 and specialized transit ridership figures from FY 23/24. Ridership figures are based on Fiscal Year 24/25 Specialized Transit figures provided by Transit Operators.

Table 5 – Local & Authority Program of Projects

This table summarizes revenue estimates from Tables 1-4, organized by the two Programs of Projects, a Local program, and an Authority program, as required by the ordinance for SBCAG to adopt annually. It includes a column listing the agencies responsible for preparing the various components of the two POPs.

Program of Projects Submittal Form

Annually, SBCAG and local agency recipients of Measure A funds are required to adopt a program of projects that shows how Measure A funds will be spent over the five years. The current Local Program of Projects Submittal form is included in **Attachment 3**. It is based on Appendix B1 (Local Street and Transportation Improvements Funding Eligible Uses) and Appendix B2 (eligible Local Street and Transportation Improvements Funding Alternative Transportation Expenditures) of the Measure A Investment Plan.

The submittal form also includes a designated area for agencies to document how they meet their prescribed alternative transportation expenditure percentages. These percentages for local alternative expenditures must be met by the end of the program's fourth quinquennium (FY 29/30). One column is to be used exclusively by the County to identify expenditures on Class 2 bikeway maintenance that may be counted towards its alternative transportation percentage. The County may count 50% of such expenditures towards its percentages, but these expenditures may not exceed 50% of the prescribed rate in the five-year period.

Schedule

Attachment 2 to this report includes a summary schedule of the Measure A POP process. The local Programs of Projects are due to SBCAG by March 31, 2025. SBCAG staff will present them for review in May and adoption in June.

COMMITTEE REVIEW:

The estimates were presented to the Technical Transportation Advisory Committee (TTAC) on February 5, 2026, and the committee recommended approval to the SBCAG Board.

COUNCIL AGENDA REPORT

TO: Mayor and City Council

FROM: Graciela Reynoso Chief Human Resources Officer

DATE: May 5, 2026

SUBJECT: **Annual Report Regarding City of Santa Maria Workforce Vacancies, Recruitment and Retention Efforts Pursuant to AB 2561**

Description:
The City Council will receive and file a report on the City's workforce vacancies, recruitment, and retention efforts in compliance with Assembly Bill 2561 (Gov. Code § 3502.3.) as of December 26, 2025.

Environmental Notice: The activity is not a "Project" as defined under Section 15378 of the California Environmental Quality Act State Guidelines; therefore, pursuant to State Guidelines Section 15060(c)(3) no environmental review is required.

RECOMMENDATION:

1. Conduct a public hearing to report on vacancy levels, evaluate hiring and retention efforts; and
2. Receive and file this report and attachments on the City's workforce vacancies and recruitment and retention efforts in compliance with Assembly Bill 251 (Gov. Code § 3502.3.).

BACKGROUND:

Assembly Bill 2561 (AB 2561) was signed into law on September 22, 2024, by Governor Newsom. The bill amends the Meyers-Milias Brown Act ("MMBA") and creates Government Code Section 3502.3 (GC 3502.3), thereby creating a new obligation for public agencies to hold a public hearing annually to report on vacancy levels and evaluate hiring and retention efforts. Additionally, AB 2561 entitles recognized bargaining groups to make a presentation before the agency's governing body at the public hearing in which the agency makes its presentation.

DISCUSSION:

The City Workforce and Vacancies
The City of Santa Maria has a well qualified workforce in many different job types as City operations are varied and complex.

As of December 2025, the City had 741.60 Full-time Equivalent (FTE) budgeted full-time and part-time benefitted positions across 10 departments. The City maintains labor agreements in the form of either Memorandums of Understanding and Wage and Benefits Agreements (Resolutions for unrepresented groups) with the following employee groups:

Bargaining Units / Employee Salary Groups
Firefighters Union Local 2020
Non-Management & Confidential Employees (Unrepresented)
Police Officers' Association
Public Safety Managers (Unrepresented)
Service Employees International Union 620
Santa Maria Police Association of Middle Management

As of year-end 2025, the City's vacancy rate was 13.3% of the total FTE count. No represented unit had a vacancy rate of 20 percent or higher.

The table below includes the total vacancies for the end of calendar 2025 in each of the employee groups:

Bargaining Group	Budgeted FTE	Vacancy Count	Vacancy Rate
Firefighters Union Local 2020	74.0	8.0	10.8%
Non-Represented Management & Confidential Employees (Unrepresented)	114.0	22.0	19.2%
Police Officers' Association	148.0	19.0	12.8%
Public Safety Managers (Unrepresented)	10.0	0.0	0.0%
Service Employees International Union 620	372.6	48.4	12.9%
Santa Maria Police Association of Middle Management	23.0	1.0	4.3%
Overall	**741.6**	**98.4**	**13.3%**

While this report is a representation of City workforce data from December of 2025, it is important to note that City has worked to clean up long-term vacant positions so as to clarify position control and budget. As of January 20, 2026, the City has an overall FTE count of 719.4. The City currently has 82.0 FTE vacancies as of April 17, 2026.

Recruitment Efforts and Strategies

The City maintains positive employee relations, a robust system for talent management, succession planning and employee engagement while protecting employee health and supporting workplace safety protocols. We strive to recruit, develop, and retain a diverse,

well-qualified and professional workforce that reflects the high standards of the community we serve.

To meet these goals, Human Resources partners with departmental representatives when a vacancy occurs to ensure that Human Resources and the department align the recruitment process to focus on current and future needs, and to ensure the recruitment examination process is reflective of the position and accurately captures the position's duties and responsibilities. The City advertises job opportunities with industry-specific journals and websites; and social media and networking sites to attract talent to fulfill the City's mission and public good.

In calendar year 2025, the City conducted 56 recruitments, receiving a total of approximately 1,684 applications. These efforts resulted in 241 appointments for the City, in both full-time, part-time, and limited-service positions. Of these appointments, 93 were promotional appointments, which signals a healthy workforce with growth opportunities within the organization.

Competitive Employment Offers

In an effort to attract and retain quality employees, the City offers incentives such as:

- Education incentive for certain degrees and certifications
- Hiring incentives for hard-to-fill positions
- Relocation assistance
- Various options for medical coverage for eligible employees and their dependents at minimal cost
- Competitive pay programs and salary reviews
- Advanced accruals for vacation and sick leave available for negotiation

Retention Strategies: Maintaining a Competitive Position and Positive Employee Relations

The City has initiated a comprehensive classification and compensation study that is now well underway and will continue through the next phases of reviewing classification specifications and market data. This review encompasses more than 200 City classifications and is essential to addressing labor market changes, regulatory requirements, and evolving organizational needs to ensure both market competitiveness and internal alignment for the complex work our employees perform.

The study will also modernize and streamline the City's classification structure. This includes developing updated, legally compliant classification descriptions that reflect current roles, responsibilities, duties, and qualifications, as well as contemporary industry standards.

When the study launched, Human Resources partnered with the labor groups and a variety of stakeholders to select a qualified vendor to conduct this work, ensuring a collaborative and transparent process.

Conclusion
The City's tangible efforts and continuous improvement of our employee offerings will continue to attract and retain top talent through employee-centric initiatives such as the classification and compensation study, employee training programs, engagement initiatives, and positive employee and labor relations, and the opportunity to serve the Santa Maria community.

Alternative(s)
This is a mandated report to be presented to City Council.

Fiscal Considerations
There is no fiscal impact to Council receiving this report.

Impact on the Community
As a result of this report, the community will be informed of the status of position vacancies and recruitment and retention efforts at the City.

COUNCIL AGENDA REPORT

TO: Mayor and City Council

FROM: Rebecca Campbell, Director of Finance

DATE: May 5, 2026

SUBJECT: **Tax and Equity Fiscal Responsibility Act (TEFRA) Hearing Regarding the Perlman Apartments and Adoption of a Resolution Approving Issuance of Bonds**

Description:
The City Council will consider adopting a Resolution at a public hearing as required by the Tax and Equity Fiscal Responsibility Act and the Internal Revenue Code of 1986, as amended.

Environmental Notice: The activity is not a "Project" as defined under Section 15378 of the California Environmental Quality Act State Guidelines; therefore, pursuant to State Guidelines Section 15060(c)(3) no environmental review is required.

RECOMMENDATION:

1. Conduct a public hearing under the requirements of the Tax and Equity Fiscal Responsibility Act (TEFRA) and the Internal Revenue Code of 1986, as amended; and
2. Adopt a Resolution approving the issuance of the California Municipal Finance Authority exempt facility bonds in an aggregate principal amount not to exceed $35,000,000 for the purpose of financing or refinancing the acquisition, construction, improvement and equipping of the Perlman Project and certain other matters relating thereto.

BACKGROUND:

Danco Communities requested that the California Municipal Finance Authority (CMFA) serve as the municipal issuer of the Bonds in an aggregate principal amount not to exceed $35,000,000 (the "Bonds") of tax-exempt revenue bonds. The proceeds of the Bonds will be used to: (1) finance or refinance the acquisition, construction, improvement and equipping of The Perlman, a multifamily rental housing project located at 100 North Broadway, Santa Maria, California; and (2) pay certain expenses incurred in connection with the issuance of the Bonds.

In order for the Bonds to qualify as tax-exempt bonds, the City of Santa Maria must conduct a public hearing (the "TEFRA Hearing") providing for the members of the community an opportunity to speak in favor of or against the use of tax-exempt bonds for the financing of the Project. Prior to such TEFRA Hearing, reasonable notice must be provided to the members of the community. Following the close of the TEFRA Hearing,

an “applicable elected representative” of the governmental unit hosting the Project must provide its approval of the issuance of the Bonds for the financing of the Project.

California Municipal Finance Authority

The CMFA was created on January 1, 2004, pursuant to a joint exercise of powers agreement to promote economic, cultural and community development, through the financing of economic development and charitable activities throughout California. To date, over 350 municipalities have become members of CMFA.

The CMFA was formed to assist local governments, non-profit organizations and businesses with the issuance of taxable and tax-exempt bonds aimed at improving the standard of living in California. The CMFA’s representatives and its Board of Directors have considerable experience in bond financings.

The Bonds to be issued by the CMFA for the Project will be the sole responsibility of the Borrower, and the City will have no financial, legal, moral obligation, liability or responsibility for the Project or the repayment of the Bonds for the financing of the Project. All financing documents with respect to the issuance of the Bonds will contain clear disclaimers that the Bonds are not Bonds of the City or the State of California but are to be paid for solely from funds provided by the Borrower.

Participation by the City in the CMFA will not impact the City’s appropriations limits and will not constitute any type of indebtedness by the City. Outside of holding the TEFRA hearing, adopting the required resolution, no other participation or activity of the City or the City Council with respect to the issuance of the Bonds will be required.

Fiscal Considerations

There is no direct or indirect financial impact to the City as a result of this proposed financing. The CMFA will issue tax-exempt bonds on behalf of the Project. The tax-exempt bonds are payable solely out of the revenues derived by the Borrower from the applicable project. No financial obligations are placed on the City for project financing costs or debt repayment.

The Board of Directors of the California Foundation for Stronger Communities, a California non-profit public benefit corporation (the “Foundation”), acts as the Board of Directors for the CMFA. Through its conduit issuance activities, the CMFA shares a portion of the issuance fees it receives with its member communities and donates a portion of these issuance fees to the Foundation for the support of local charities. With respect to the City of Santa Maria, it is expected that a portion of the issuance fee attributable to the City will be granted by the CMFA to the General Fund of the City. Such grant may be used for any lawful purpose of the City.

Impact on the Community
Approving the issuance of the tax-exempt bonds benefits the community by creating 150 units of affordable housing.

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SANTA MARIA, CALIFORNIA, APPROVING THE ISSUANCE OF THE CALIFORNIA MUNICIPAL FINANCE AUTHORITY EXEMPT FACILITY BONDS IN AN AGGREGATE PRINCIPAL AMOUNT NOT TO EXCEED $35,000,000 FOR THE PURPOSE OF FINANCING OR REFINANCING THE ACQUISITION, CONSTRUCTION, IMPROVEMENT AND EQUIPPING OF THE PERLMAN PROJECT AND CERTAIN OTHER MATTERS RELATING THERETO

WHEREAS, Santa Maria North Broadway LP (the "Borrower") a partnership of which Danco Communities (the "Developer") or a related person to the Developer is the general partner, has requested that the California Municipal Finance Authority (the "Authority") adopt a plan of financing providing for the issuance of exempt facility bonds for a qualified residential rental project pursuant to Section 142(a)(7) of the Internal Revenue Code of 1986 (the "Code") in one or more series issued from time to time, including bonds issued to refund such exempt facility bonds in one or more series from time to time, and at no time to exceed $35,000,000 in aggregate principal amount (the "Bonds"), to finance or refinance the acquisition, construction, improvement and equipping of a multifamily rental housing project located at 100 North Broadway, Santa Maria, California (the "Project"); and

WHEREAS, pursuant to Section 147(f) of the Code, the issuance of the Bonds by the Authority must be approved by the City of Santa Maria (the "City") because the Project is located within the territorial limits of the City; and

WHEREAS, the City Council of the City (the "City Council") is the elected legislative body of the City and is one of the "applicable elected representatives" required to approve the issuance of the Bonds under Section 147(f) of the Code; and

WHEREAS, the Authority has requested that the City Council approve the issuance of the Bonds by the Authority in order to satisfy the public approval requirement of Section 147(f) of the Code and the requirements of Section 4 of the Joint Exercise of Powers Agreement Relating to the California Municipal Finance Authority, dated as of January 1, 2004 (the "Agreement"), among certain local agencies, including the City; and

WHEREAS, pursuant to Section 147(f) of the Code, the City Council has, following notice duly given, held a public hearing regarding the issuance of the Bonds, and now desires to approve the issuance of the Bonds by the Authority;

NOW, THEREFORE, IT IS HEREBY RESOLVED, by the City Council of the City of Santa Maria as follows:

SECTION 1. The foregoing resolutions are true and correct.

SECTION 2. The City Council hereby approves the issuance of the Bonds by the Authority. It is the purpose and intent of the City Council that this resolution constitute approval of the issuance of the Bonds by the Authority, for the purposes of (a) Section 147(f) of the Code by the applicable elected representative of the governmental unit having jurisdiction over the area in which the Project is located, in accordance with said Section 147(f) and (b) Section 4 of the Agreement.

SECTION 3. The issuance of the Bonds shall be subject to the approval of the Authority of all financing documents relating thereto to which the Authority is a party. The City shall have no responsibility or liability whatsoever with respect to the Bonds.

SECTION 4. The adoption of this Resolution shall not obligate the City or any department thereof to (i) provide any financing to acquire or construct the Project or any refinancing of the Project; (ii) approve any application or request for or take any other action in connection with any planning approval, permit or other action necessary for the acquisition, construction, rehabilitation, installation or operation of the Project; (iii) make any contribution or advance any funds whatsoever to the Authority; or (iv) take any further action with respect to the Authority or its membership therein.

SECTION 5. The officers of the City are hereby authorized and directed, jointly and severally, to do any and all things and to execute and deliver any and all documents which they deem necessary or advisable in order to carry out, give effect to and comply with the terms and intent of this resolution and the financing transaction approved hereby.

SECTION 6. This resolution shall take effect immediately upon its adoption.

NOTICE OF PUBLIC HEARING

NOTICE IS HEREBY GIVEN that on May 5, 2026, a public hearing as required by Section 147(f) of the Internal Revenue Code of 1986 (the "Code"), will be held with respect to a proposed plan of financing providing for the issuance by the California Municipal Finance Authority (the "Authority") of exempt facility bonds for a qualified residential rental project pursuant to Section 142(a)(7) of the Code in one or more series issued from time to time, including bonds issued to refund such exempt facility bonds in one or more series from time to time, in an amount not to exceed $35,000,000 in aggregate principal amount (the "Bonds"). The proceeds of the Bonds will be used to: (1) finance or refinance the acquisition, construction, improvement and equipping of The Perlman, a multifamily rental housing project located at 100 North Broadway, Santa Maria, California; and (2) pay certain expenses incurred in connection with the issuance of the Bonds. The facilities are to be owned by Santa Maria North Broadway LP (the "Borrower") or a partnership of which Danco Communities (the "Developer") or a related person to the Developer is the general partner.
The Bonds and the obligation to pay principal of and interest thereon and any redemption premium with respect thereto do not constitute indebtedness or an obligation of the Authority, the State of California or any political subdivision thereof, within the meaning of any constitutional or statutory debt limitation, or a charge against the general credit or taxing powers of any of them. The Bonds shall be a limited obligation of the Authority, payable solely from certain revenues duly pledged therefor and generally representing amounts paid by the Borrower.
The hearing will commence at 5:30 p.m. or as soon thereafter as the matter can be heard, and will be held in the City Council Chambers, 110 East Cook Street, Santa Maria, California. Interested persons wishing to express their views on the issuance of the Bonds or on the nature and location of the facilities proposed to be financed or refinanced may attend the public hearing or, prior to the time of the hearing, submit written comments.
Additional information concerning the above matter may be obtained from, and written comments should be addressed to, City Council, Attn.: City Clerk's Office, 110 East Cook Street, Santa Maria, CA 93454 or emailed to cityclerk@cityofsantamaria.org.

COUNCIL AGENDA REPORT

TO: Mayor and City Council

FROM: Shad S. Springer, Director of Utilities

DATE: **May 5, 2026**

SUBJECT: **Introduction of an Ordinance Amending Chapters 8-10A (Cross-Connections) and 8-1.07 (Appeals) of Title 8 of the Santa Maria Municipal Code**

Description:
The City Council will consider introducing an Ordinance amending Chapters 8-10A (Cross-Connections) and Chapter 8-1.07 (Appeals) of Title 8 of the Santa Maria Municipal Code.

Environmental Notice: The activity is not a "Project" as defined under Section 15378 of the California Environmental Quality Act State Guidelines; therefore, pursuant to State Guidelines Section 15060(c)(3) no environmental review is required.

RECOMMENDATION:

The City Council to:

1. Waive first reading and introduce an Ordinance amending Chapter 8-10A and Chapter 8-1 of Title 8 of the Santa Maria Municipal Code concerning Cross-Connections and Applications for Public Service; and
2. Set for adoption at the next regular City Council meeting.

SUMMARY:

The City of Santa Maria Utilities Department is presenting the Cross-Connection Control Plan (Plan) and corresponding ordinance updates, to implement a risk-based program for preventing backflow and protecting drinking water quality. The Plan defines schedules for hazard assessments, tester certifications, testing requirements, enforcement, recordkeeping, and public outreach. The Ordinance updates Title 8 (Attachment A) provide the definitions, authority, responsibilities, and enforcement tools needed for City implementation.

BACKGROUND:

Cross-connections are actual or potential links between the drinking water system and non-potable sources that could allow contaminants to enter the potable (drinking) supply. Examples include irrigation systems, fire sprinkler systems, or industrial processes connected to the potable water system. Backflow occurs when water flows in reverse, often due to pressure changes, allowing non-potable water or substances to migrate into the potable water system, which can lead to contamination of the system.

Santa Maria has experienced no known backflow incidents and the City's program has long emphasized prevention, routine testing, and corrective action to protect residents, businesses, schools, and commercial facilities including healthcare sites. However, to ensure consistent public health protection, the State Water Resources Control Board adopted the Cross-Connection Control Policy Handbook (Handbook) on December 19, 2023, effective July 1, 2024, replacing relevant portions of Title 17 of the California Code of Regulations.

The City submitted its draft Plan in June 2025 to the Division of Drinking Water (DDW). After minor technical revisions in Fall 2025, the DDW approved the Plan in January 2026 (Attachment B), with the expectation that the City adopt the enabling ordinances in early 2026 and implement the Plan. The most current version of the Plan will remain on file with the Utilities Department.

The City's existing framework (SMMC Title 8-10A and Engineering Standards) already includes regular testing, record keeping, and enforcement. The existing SMMC must be amended to reflect the changes required by the State through its replacement of portions of Title 17 of the California Code of Regulations and to provide specific sections required by the Handbook. Implementation of the Plan and updated ordinance formalizes these practices, clarifies responsibilities, and sets timelines consistent with City water operations, customer needs, and State requirements.

DISCUSSION

The primary objective of the Handbook is the protection of public health through the establishment of standards intended to ensure a potable water system will not be subject to backflow. The Handbook mandates the Plan (Attachment C) be adopted by the City that outlines how it will implement the requirements of the Handbook. The Plan includes administrative procedures, inspection schedules, testing protocols, enforcement mechanisms, and customer education strategies.

The City's Plan contains the following key components as required by the Handbook:

- Hazard Assessments and Scheduling. The Plan establishes risk-based hazard assessments at each service connection, paced at approximately 500 assessments per year. Milestones are set for non-residential connections by the end of 2031, higher-risk residential connections by July 1, 2034, and all remaining residential connections by the end of 2071.

- Qualifications and Testing. To ensure quality and consistency, the City will maintain a list of pre-approved backflow prevention assembly testers and certified cross-connection control specialists. The Plan clarifies testing frequency, performance standards, and accountability. The responsible party, typically the property owner, must test, maintain, and repair assemblies on schedule, while the City oversees program integrity, supports customer communication, and tracks compliance.

- Enforcement and Risk Management. The updated ordinance provides the City with clear authority to address elevated risks when hazards are not abated or assemblies are not inspected, tested, or maintained. Enforcement will use graduated notices and reasonable compliance windows, reserving service disconnection as a last resort, and focusing on risk reduction and continuity of service for residents and businesses.

- Record Keeping and Transparency. Consolidated records of assessments, site classifications, installations, test results, and enforcement allow staff to identify trends, respond quickly to issues, and report program performance.

Most customers will experience minimal change because the City already operates a mature program. However, some existing single-family residences constructed since 2011, with certain fire sprinkler configurations (approximately 1,500 homes), may require a backflow prevention assembly or system modifications by July 1, 2034, to meet current standards. Customer costs will be site-specific, driven by hazard classifications and device needs identified during assessments. Targeted outreach will provide residents and businesses advance notice and clear guidance, enabling them to plan compliance alongside routine maintenance cycles.

To minimize further impacts, City standards for residential fire sprinkler systems have been updated so that future single-family homes with sprinklers will not require a backflow prevention assembly under current design practices.

Related amendments to Santa Maria Municipal Code Title 8 are proposed to clarify City authority and customer responsibilities and align recordkeeping and reporting to the Plan's timelines). If introduced, staff will return at the next regular City Council Meeting for adoption. Staff will also finalize outreach materials, publish the pre-approved tester list, and schedule hazard assessments per the Plan.

Alternatives

The City Council may:

1. Direct staff to revise the Ordinance prior to introduction. This is not recommended because it will extend the schedule, require rerouting through internal City reviews, delay first reading and adoption, and postpone program activities. In addition, the Ordinance was drafted to meet specific requirements of the State.
2. Delay action, noting potential impacts on scheduling and staffing for hazard assessments and customer communications. This is not recommended because it could delay required hazard assessment milestones (non-residential by 2031; higher-risk residential by July 1, 2034; remaining residential by 2071) or compress future workload, increasing staffing, overtime, and contractor costs. Furthermore, the timeline identified in the Plan was the most flexible that DDW would allow.

Fiscal Considerations

City implementation including staff training, public outreach, and periodic inspections, will be funded through user fees and adopted water rates. Spreading hazard assessments over multiple years smooths operational impacts and cost, limiting overtime and contractor dependence.

Impact on the Community

The Plan reinforces a safe, reliable drinking water system and provides clear expectations for residents and businesses.

C. Cross-Connection Control Plan-April 2026

ORDINANCE NO.

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF SANTA MARIA, CALIFORNIA AMENDING CHAPTERS 8-10A AND CHAPTER 8-1 OF TITLE 8 OF THE SANTA MARIA MUNICIPAL CODE CONCERNING CROSS-CONNECTIONS AND APPLICATIONS FOR PUBLIC SERVICE

WHEREAS, the State Water Resources Control Board adopted the Cross-Connection Control Policy Handbook on December 19, 2023, effective July 1, 2024, replacing relevant portions of Title 17 of the California Code of Regulations; and

WHEREAS, the Santa Maria Municipal Code must be amended to reflect the changes required by the State through its replacement of portions of Title 17 of the California Code of Regulations and to provide specific sections required by the Cross-Connection Control Program Handbook.

NOW, THEREFORE, IT IS HEREBY ORDAINED by the City Council of the City of Santa Maria, State of California, as follows:

SECTION 1. Chapter 8-10A of Title 8 of the Santa Maria Municipal Code ("SMMC") concerning Cross-Connections is amended as follows:

Section 8-10A.01. Purpose.

(a) To protect the public Potable Water supply of the City of Santa Maria from the possibility of contamination or pollution by isolating within the Responsible Party's internal or private water system(s) such contaminants or pollutants which could Backflow into the public water distribution system; and
(b) To promote the elimination or control of existing cross-connections, actual or potential, between the Responsible Party's in-plant Potable Water system(s) and non-potable water system(s), plumbing fixtures, and industrial piping system(s); and
(c) To provide for the maintenance of a continuing program of Cross-Connection control which shall systematically and effectively prevent the contamination or pollution of the publicly owned Potable Water system; and
(d) To provide outreach and education on Cross-Connections to the community, water customers, and City staff; and
(e) To meet the State of California's Cross-Connection Control Policy Handbook standards.

Section 8-10A.02. Definitions.

"Approved" means accepted by the Director of Utilities as meeting an applicable specification stated or cited in this Ordinance, the Cross-Connection Control Plan, or as suitable for the proposed site.

“Backflow” means an undesired or unintended reversal of flow of water and/or other liquids, gases, or other substances into a public water system’s distribution system or approved water supply.

“Backflow Prevention Assembly” or “BPA” means an Approved mechanical assembly designed and constructed to prevent Backflow, such that while in-line it can be maintained and its ability to prevent Backflow, as designed, can be field tested, inspected and evaluated.

“Cross-Connection” means any actual, potential, or temporary connection (such as swing connections, removable sections, four-way plug valves, spools, dummy sections of pipe, swivel or change-over devices, sliding multiport tubes, or similar) or structural arrangement between the public Potable Water distribution system, including a piping system connected to the Distribution System and located on the Premises of a water user or available to the water user, and any source or system containing liquid, gas, or other substances that may enter the public Potable Water system.

“Cross-Connection Control Plan” or “CCC Plan” means the City’s guiding document establishing the methods, procedures, and policies the City has in place to comply with the requirements of the Cross-Connection Control Policy Handbook.

“Cross-Connection Control Policy Handbook” or “CCCPH” means the State of California cross-connection control (CCC) program standards as established in the CCCPH, which became effective July 1, 2024, and are incorporated into the State of California’s Drinking Water Regulations. The CCCPH and its standards apply to all California public water systems (PWSs), as defined in California’s Health and Safety Code (CHSC, section 116275 (h)). Compliance with this CCCPH is mandatory for all California PWSs. The CCCPH updated and replaced Title 17 of the California Code of Regulations.

“Director of Utilities” means the administrator/manager in charge of all aspects of the Utilities Department.

“Distribution System” means the network of conduits used for the delivery of Potable Water from the source to the Responsible Party's water system.

“Potable Water” means water which is satisfactory for drinking, culinary, and domestic purposes and meets the requirements of the United States Environmental Protection Agency (USEPA) or its successor organization.

“Premises” means any location, building, structure, residence, garage, room, shed, shop, store, dwelling, lot, parcel, land or portion thereof, whether improved or unimproved.

“Responsible Party” means the owner, operator, manager or occupant of a Premises which has water service from a public Potable Water distribution system; the owner, manager or operator of a private water system that has water service from a public Potable Water distribution system.

“Service Connection” means the terminal end of a tie-in to the public Potable Water system, i.e., the location where the City of Santa Maria loses jurisdiction and sanitary control over the water. If a City-owned meter is installed at the end of the tie-in to the public Potable Water system, then the Service Connection generally means the downstream end of the meter.

“Service Line” means private piping extending from the Service Connection to the Responsible Party's point(s) of use.

“Water System” means the piping and all related appurtenances providing Potable Water to a Premises. In the City of Santa Maria, the water system is made up of two parts:

(1) The public Potable Water distribution system includes all the facilities and the network of conduits used for the delivery of water that remain under the control of the City of Santa Maria up to the point where the Responsible Party's system begins.

(2) The Responsible Party's system includes those parts used for the delivery of water to points of use located on the responsible party's Premises beyond the termination of the public Potable Water distribution system.

Section 8-10A.03. Authority of Director of Utilities.

The Director of Utilities is authorized to prepare, amend, and enforce the Cross-Connection Control Plan to protect the public Potable Water distribution system from contamination or pollution due to the Backflow of contaminants or pollutants through the Service Connection and to comply with the Cross-Connection Control Policy Handbook.

Section 8-10A.04. Requirements.

(a) By agreeing to start, or continuing to accept, utility services, the Responsible Party agrees to comply with all regulations pertaining to such services pursuant to requirements in the SMMC and the Conditions for Service established in the Cross-Connection Control Plan.

(b) Installation, modification, or alteration of any Service Connection is prohibited without prior approval from the Director of Utilities and compliance with the Cross-Connection Control Plan.

Section 8-10A.05. Enforcement, Violations, and Penalties.

(a) A violation of the Cross-Connection Control Plan is a violation of this Ordinance.

(b) A notice of violation will be issued to any Responsible Party found to be in violation of any provision of this Ordinance or the adopted Cross-Connection Control Plan. The Responsible Party shall correct the violation within the time frame given in

the notice of violation. If the Director of Utilities, or their designee, determines that the violation is creating or contributing to the existence of an imminent hazard, the Responsible Party shall correct the violation immediately. In any case of violation, the Director of Utilities has the authority to discontinue water service at any time the City determines the violation causes an imminent risk to the public Potable Water distribution system or Potable Water supply, regardless of whether a notice of violation has been issued. In such cases, the City will issue a post-shutoff notice of violation.

(c) Water service may be terminated after a second notification of violation of the same provision within a one-year period. Any person violating any provision of this Ordinance shall pay to the City all expenses incurred by the City in repairing any damage to the public Potable Water distribution system or actions required by the City to be taken to protect the Potable Water supply caused in whole or in part by such violation and any expense incurred by the City in investigating such violation.

(d) In addition to other remedies in this Ordinance, any Responsible Party violating any of the provisions herein is guilty of a misdemeanor and upon conviction thereof is punishable in accordance with Chapters 1-6 of the SMMC. As additional remedies, any Responsible Party in violation of this Ordinance may be subject to summary abatement proceedings, restraining order, injunction issued by a court of competent jurisdiction, administrative citation pursuant to Chapter 1-9 of the SMMC, administrative penalty pursuant to Chapter 1-8 of the SMMC, or any other remedy provided by law.

SECTION 2. Chapter 8-1.07 of Title 8 of the SMMC concerning Cross-Connections is amended as follows:

Section 8-1.07 Appeals.

In the event that any user or consumer is aggrieved by any ruling of the Director of Utilities made pursuant to any of the provisions of this chapter and Chapters 8-9, 8-10, 8-10A, 8-11, and 8-13, such consumer or user may appeal from such ruling to the City Manager within the time and in the manner set forth in Section 8-12.1406. The City Manager's action on such appeal shall likewise be made and become final pursuant to the provisions of Section 8-12.1406.

SECTION 3. This Ordinance has been reviewed for compliance with the California Environmental Quality Act (CEQA), and the CEQA guidelines, and the City's environmental procedures, and has been found to be exempt pursuant to Section 15601(b)(3) (general rule) of the CEQA Guidelines, because the City Council hereby finds with certainty that there is no possibility the passage of this Ordinance amending the public facilities and services code will have a significant effect on the environment.

SECTION 4. If any part or provision of this chapter, or the application thereof to any person or circumstance, is held invalid, the remainder of the chapter, including the application of that part or provision to other persons or circumstances, shall not be

affected thereby and shall continue in full force and effect. To this end, the provisions of this Ordinance are severable.

SECTION 5. This Ordinance shall be in full force and effect 30 days after its passage. Within 15 days following its passage, the Chief Deputy City Clerk shall cause this Ordinance to be published in a newspaper of general circulation in accordance with State Law; or when deemed necessary due to the length or complexity of the Ordinance, cause a summary of the Ordinance to be prepared and published at least five days prior to the City Council meeting at which the proposed Ordinance is to be adopted. If a summary is published at least five days prior to the City Council meeting at which the proposed Ordinance is to be adopted, then within 15 days after adoption of the Ordinance the Chief Deputy City Clerk shall publish a summary of the Ordinance with the names of those City Council Members voting for and against the Ordinance and shall post a certified copy of the full text of such adopted Ordinance along with the names of those City Council Members voting for and against the Ordinance.

SECTION 6. The Chief Deputy City Clerk is hereby authorized to make minor changes herein to address clerical errors, so long as substantial conformance of the intent of this document is maintained. In doing so, the Chief Deputy City Clerk shall consult with the City Manager and City Attorney concerning any changes deemed necessary.

(This space is intentionally blank.)

RE: Approval of Cross-Connection Control Plan, City of Santa Maria Utilities Department (CA4210011)

Dear Mr. Springer,

Thank you for the submission of the Cross-Connection Control Plan (CCCP) for the City of Santa Maria Utilities Department (City), submitted to the Division of Drinking Water (DDW) on January 7, 2026. Based on DDW's review of this CCCP, DDW recommends the City complete the initial hazard assessment in a shorter timeframe if possible. The City has demonstrated compliance with the CCCP requirements of the Cross-Connection Control Policy Handbook (CCCPH), effective July 1, 2024. DDW has approved this CCCP.

Per the CCCPH, the City is required to submit an updated CCCP to DDW at any time substantial revisions are made to the CCCP.

If you have any questions, please contact our office at (805) 566-1326.

Sincerely,

Attachment B – Backflow Incident Response Plan
Attachment C – Questionnaire
Attachment D – Hazard Assessment
Attachment E – List of Air Gaps and Air Gap Inspection Procedure

Cross-Connection Control Plan Certification Page

I certify that the information submitted in this plan is accurate and we will comply with the Cross-Connection Control Policy Handbook (effective date July 1, 2024).

City of Santa Maria Water System Representative

Name: Joshua Reynolds	**Title:** Water Resources Manager
Signature:	**Date:** 1/5/2026

City of Santa Maria Water System Designated Certified Cross-Connection Specialist

Name: John Maxson	**Title:** Regulatory Compliance Specialist
Signature:	**Date:** 1/5/2026

Definitions

Unless otherwise defined, all terms used in this Cross-Connection Control Plan pertaining to cross-connection control have the same definitions as those contained in the Cross-Connection Control Policy Handbook (CCCPH).

Other Defined Terms:

Approved: Accepted by the Director of Utilities as meeting an applicable specification stated or cited in the Cross-Connection Control Program, or as suitable for the proposed site.

Approved Backflow Prevention Assembly: Or "BPA" means a mechanical assembly designed and constructed to prevent backflow, such that while in-line it can be maintained and its ability to prevent backflow, as designed, can be field tested, inspected and evaluated.

Backflow: An undesired or unintended reversal of flow of water and/or other liquids, gases, or other substances into a public water system's distribution system or approved water supply.

Cross-Connection: Any actual, potential, or temporary connection (such as swing connections, removable sections, four-way plug valves, spools, dummy sections of pipe, swivel or change-over devices, sliding multiport tubes, or similar) or structural arrangement between the public potable water distribution system, including a piping system connected to the Distribution System and located on the premises of a water user or available to the water user, and any source or system containing liquid, gas, or other substances that may enter the public potable water system.

Cross-Connection Control Plan (CCC Plan): The City's guiding document establishing the methods, procedures, and policies the City has in place to comply with the requirements of the Cross-Connection Control Policy Handbook. This document.

Cross-Connection Control Policy Handbook (CCCPH): The State of California cross-connection control program standards as established in the Cross-Connection Control Policy Handbook (CCCPH), which became effective July 1, 2024, and are incorporated into the State of California's Drinking Water Regulations. The CCCPH and its standards apply to all California public water systems (PWSs), as defined in California's Health and Safety Code (CHSC, section 116275 (h)). Compliance with this CCCPH is mandatory for all California PWSs. The CCCPH updated and replaced Title 17 of the California Code of Regulations.

Cross-Connection Control Program (CCC Program): The overarching program in place to regulate cross-connection controls in the City and comply with the CCCPH. The CCC Program includes the CCC Plan, enabling rules and ordinances, City standards including building, plumbing, and fire standards, and the personnel to enforce the regulations.

Director of Utilities: The administrator/manager in charge of all aspects of the Utilities Department.

Distribution System: The network of conduits used for the delivery of potable water from the source to the responsible party's water system.

Potable Water: Water which is satisfactory for drinking, culinary, and domestic purposes and meets the requirements of the United States Environmental Protection Agency (USEPA) or its successor organization.

Premises: Any location, building, structure, residence, garage, room, shed, shop, store, dwelling, lot, parcel, land or portion thereof, whether improved or unimproved.

Premises Containment: The protection of a public water system’s distribution system from backflow from a user’s premises through the installation of one or more air gaps or BPAs, installed as close as practical to the user’s service connection, in a manner that isolates the water user’s water supply from the public water system’s distribution system.

Responsible Party: The owner, operator, manager, or occupant of a premises which has water service from a public potable water distribution system; the owner, manager, or operator of a private water system that has water service from a public potable water distribution system.

Service Connection: The terminal end of a tie-in to the public potable water system; i.e., the location where the City of Santa Maria loses jurisdiction and sanitary control over the water. If a meter is installed at the end of the service connection, then the service connection generally means the downstream end of the meter.

Service Line: Private piping extending from the service connection to the responsible party's point(s) of use.

Water System: The piping and all related appurtenances providing potable water to a premises. In the City of Santa Maria, the water system is made up of two parts:

1. The City Distribution System includes all facilities and the network of conduits used for the delivery of water that are under the control of the City up to the point where the Responsible Party System begins.
2. The Responsible Party Water System includes those parts used for the delivery of water to points of use located on the Responsible Party System premises beyond the termination of the City Distribution System.

City of Santa Maria Cross-Connection Control Program

The City of Santa Maria operates PWS CA4210011 and has the responsibility to protect the public water supply through implementation and enforcement of a CCC Program.

Program Requirements

In conformance with the CCCPH, the City of Santa Maria CCC Program includes the following elements.

- Santa Maria Municipal Code and the relevant operating rules and ordinances.
- City Standards.
- Designated cross-connection control program coordinator.
- This Cross-Connection Control Plan.
  - Processes and procedures for hazard assessments.
  - Backflow prevention requirements.
  - Requirements to rely upon certified backflow prevention assembly testers and certified cross-connection control specialists.
  - Establishing, documenting, and enforcing backflow prevention assembly testing requirements.
  - Recordkeeping.
  - Backflow incident response, reporting, and notification.
  - Public outreach and education.
  - Local entity coordination.

Program Goals

The stated primary objective (goal) of the Cross-Connection Control Policy Handbook (CCCPH) is:

> *"The protection of public health through the establishment of standards intended to ensure a PWS's (Public Water System's) drinking water distribution system will not be subject to the backflow of liquids, gases, or other substances. In addition, by providing basic educational information on backflow prevention, the State Water Resources Control Board (State Water Board) intends to build a foundation of awareness within the regulated community regarding the importance of backflow protection and cross-connection control, leading to the implementation of a robust cross-connection control program for PWSs."*

The primary goal of the City of Santa Maria is to protect the City Distribution System from contamination or pollution by way of backflow into the system. The City will use the following actions to achieve this goal.

- Promote the elimination or control of existing cross-connections, actual or potential, between the City distribution system and the Responsible Party's water system.

- Isolate the Responsible Party's water system using an appropriate backflow prevention assembly when reasonable hazards exist which could backflow and introduce contamination or pollution into the City distribution system.
- Regularly update and enforce a CCC Program which will systematically and effectively prevent the contamination or pollution of the City distribution system. This Cross-Connection Control Plan is one aspect of the CCC Program.
- Provide outreach and education on cross-connections to the community, water customers, and City staff.

City of Santa Maria Cross-Connection Control Plan

Through the CCC Program, the City will implement a CCC Plan and ensure that its CCC Plan represents the current operation of its CCC Program. Substantive revisions to the City's CCC Plan will be submitted to the State Water Board for review.

Operating Rules or Ordinances

The City has adopted *Santa Maria Municipal Code Chapter 8-10A Cross-Connections;* which authorizes the City to implement a CCC Program. The ordinance authorizes the City to terminate water service, issue citations for Responsible Parties that do not comply with the ordinance, and to protect the public water distribution system in a manner the City deems appropriate.

Other Titles and Chapters of the Santa Maria Municipal Code will apply to buildings and development and are a part of the Cross-Connection Control Program, such as Chapter 8-10 Water Service and Chapter 9-32 Plumbing Code. The Cross-Connection Control Plan is supplemental to the Santa Maria Municipal Code, and both are a part of the Cross-Connection Control Program.

City Standards

The City maintains and publishes Standard Specifications and Drawings (City Standards) to guide engineering and development within City limits. The City Standards include standards that govern the water system including installation of backflow prevention assemblies. The City Standards supplement the Cross-Connection Control Plan and form a part of the Cross-Connection Control Program.

(This space is intentionally blank.)

Cross-Connection Control Program Coordinator

The City has designated the following individual for monitoring, tracking, and other administrative duties.

Due to the number of service connections, the City will employ a permanent or contracted Cross-Connection Control Specialist to fill the role of Cross-Connection Control Program Coordinator. The City will ensure that the employed individual is able to be contacted within one hour. The following table identifies the current certified specialist employed or retained on contract by the City to manage the City's CCC Program and/or act as the cross-connection control technical resource for the City:

Name of Designated Certified Cross-Connection Control Specialist	**John Maxson**
Address	**601 Black Rd, Santa Maria**
Email	jmaxson@cityofsantamaria.org
Phone Number	**(805) 925-0951 *7260**
Specialist Certification Number and Certifying Organization	**ABPA S05-729**

Name of CCC Program Coordinator	**Same**

Name of 24-hour CCC Contact (can be the CCC Specialist or a designee)	**(24-hour phone number will go to on-call individual)**
Title (if not the CCC Specialist)	Water Operator
24-hour Phone Number	**(805) 249-0038**

The following cross-connection related tasks will be performed by or under the direction of the City's certified CCC Program Coordinator.

- Preparation of and recommendations regarding changes to the CCC program.
- Performance of and/or review and approval of cross-connection control hazard assessments.
- Establish minimum requirement on the type of BPAs to be installed.
- Provide recommendations on schedules for retrofitting of BPAs.
- Assist with enforcement of violations of the CCC Program.
- Conduct inspections of BPAs for proper application, installation, and compliance.
- Review BPA inspection and test reports (may also be performed by a certified BPA tester).
- Provide recommendations or the granting of exceptions to mandatory premises

containment (protection at the service connection).
- Conduct or assist City staff in the investigation of backflow incidents and other water quality problems.
- Completion of Backflow Incident Reports.
- Completion or review and approval of Cross-Connection Control Annual Reports and any other deliverables required by the State Water Board.

The City may delegate other CCC Program activities to other personnel who are not certified cross-connection control specialists. These activities may include the following:

- Mailing, including e-mail and other electronic communication, collecting, and initial screening of hazard assessments.
- Mailing, including e-mail and other electronic communication, of BPA testing and non-compliance notices.
- Receiving and screening assembly testing reports.
- CCC Program database administration and recordkeeping.
- Distribution of public education and outreach material.
- Assisting with local entity coordination.

(This space is intentionally blank.)

Cross-Connection Hazard Survey Schedule for Initial Hazard Assessments

The schedule for initial hazard assessment is outlined in the following table. The schedule starts from the date the CCC Program is established (no later than July 1, 2025).

Initial Assessment Task	Estimated number to be completed per year	Estimated Completion Date
Hazard assessment of new connections will be done prior to initiating water service	500	Ongoing
Hazard assessment of high-hazard non-residential service connections which are listed on Appendix D of the CCCPH		2031
Hazard assessment of non-high hazard non-residential service connections		2031
Hazard assessment of residential service connections with special plumbing facilities or auxiliary water use		2071
Hazard assessment of all other residential service connections		2071
Fire Protection System BPA assessment and installation		**July 1, 2034** (see note below)

There are approximately 2,911 commercial, industrial, landscape, and other connections within the City Distribution System. Estimating a completion of 500 hazard assessments per year, it will take approximately 6 years to complete high hazard and non-high hazard assessments for non-residential connections. Commercial, industrial, landscape, and high hazard assessments will take precedence over single family and multi-family hazard assessments.

There are approximately 20,077 single family and multi-family connections within the City. Estimating that 500 hazard assessments are completed per year, it will take approximately 40 years, after completion of the non-residential assessments, to complete hazard assessments for single family and multi-family connections[1].

Known fire sprinkler connections will require installation of a BPA or confirmation of a currently installed and properly maintained BPA by July 1, 2034. All unprotected fire connections discovered through hazard assessments will require the installation of a BPA within 90 days for high hazard connections or 180 days for non-high hazard connections following the above schedule.

[1] Hazard assessments for residential connections will be prioritized based on factors like construction year or presence of a swimming pool or private well. Since January 2011, when residential fire sprinkler standards were adopted, 878 multi-family and 1,521 single-family permits have been processed, totaling 2,399 premises. These 2,399 premises will be assessed by July 1, 2034. DWR GIS Map will be used to help determine the presence of a private well.

Element 1 – Hazard Assessments

The City will conduct a hazard assessment of the Responsible Party premises within its service area to evaluate the potential for backflow into the City distribution system. The hazard assessment will consider the items listed below.

- The existence of cross-connections.
- The type and use of materials handled and present, or likely to be, on the user premises.
- The degree of piping system complexity and accessibility.
- Access to auxiliary water supplies, pumping systems, or pressure systems.
- Distribution system conditions that increase the likelihood of a backflow event (e.g., hydraulic gradient differences impacted by main breaks and high-water demand situations, multiple service connections that may result in flow-through conditions).
- User premises accessibility.
- Any previous backflow incidents on the user premises.
- The requirements and information provided in the CCCPH and the City of Santa Maria CCC Plan.

The procedures for conducting a hazard assessment, initial and subsequent, are in the following sections.

New Water Connections

City staff will review records on file and/or building permit applications when performing hazard assessment.

Commercial, Industrial, and Landscape Service Connections

For commercial, industrial, or landscape service connections, the City may use any of the following list.

- City staff will review records on file and/or building permit applications for hazard assessment.
- City staff will conduct an onsite assessment or a site survey for hazard identification.
- Require the water user to submit to the City a hazard assessment (at the Responsible Party's expense) by a City approved certified cross-connection control specialist.
- City review of hazard assessments previously conducted at the user premises.

Agricultural Service Connections

No agricultural service connections exist within City service area. The City will monitor requests for any new agricultural service connections and may utilize the hazard assessment procedure(s) noted in the Commercial, Industrial and Landscape Service

Connections section.

Single Family and Multi-Family Residential Service Connections

For single family and multi-family service connections, the City may use any of the following list.

- City staff will review records on file and/or building permit applications for hazard assessment.
- City staff will conduct an onsite assessment or a site survey for hazard identification.
- Require the Responsible Party to submit to the City, a completed "Water Use Questionnaire," which will be used for hazard assessment. (A copy of the "Water Use Questionnaire" is included as an attachment to this Plan).
- Require the Responsible Party to submit to the City, a hazard assessment (at the Responsible Party's expense) by a City approved certified cross-connection control specialist.
- City review of hazard assessments previously conducted at the user premises.

Temporary Service Connections

City staff will review temporary connection applications for hazard identification.

Subsequent Hazard Assessments

Subsequent to the initial hazard assessment, the City will perform a hazard assessment if any of the following events occur.

- If a user premises changes account holder, excluding single-family residences.
- If a user premises is newly or re-connected to the City.
- If evidence exists of changes in the activities or materials on a user's premises.
- If backflow from a user's premises occurs.
- Periodically, as identified in the City's CCC Plan required pursuant to CCCPH.
- If the State Water Board requests a hazard assessment of a user's premises.
- If the City concludes an existing hazard assessment may no longer accurately represent the degree of hazard.

Subsequent hazard assessments will follow the procedures listed above.

Inspection of Internal Protection at City-Owned Water Supply Treatment and Storage Facilities

The City's Blending and Disinfection Facility, Well Sites, and Water Storage Reservoirs will receive a cross-connection survey annually to assess the need for internal protection and to document the status and presence of internal protection from internal cross-connections. The City will routinely (twice per year) inspect non-testable devices as identified in the annual survey to verify the device is operating properly.

Element 2 – Prevention of Contamination

The Responsible Party's plumbing system, generally starting from the termination of the City meter, is considered a potential high-health hazard requiring the isolation of the Responsible Party's premises by an approved, Responsible Party-installed, owned, and maintained backflow prevention assembly (BPA) (e.g., reduced-pressure principle backflow prevention assembly (RP) or reduced-pressure detector assembly (RPDA)). The BPA must be located at the end of the PWS water service pipe (i.e., as close as practical to the Responsible Party side of the meter). Water will only be supplied to the Responsible Party through an approved, Responsible Party-installed, and maintained BPA.

No water service connection to any premises will be installed or maintained by the City unless the water supply is protected as required by City rules and regulations.

Service of water to any premises will be discontinued by the City if a required backflow prevention assembly is not installed, tested and maintained, or if it is found that a backflow prevention assembly has been removed, bypassed, or if an unprotected cross-connection exists on the premises. Service will not be restored until such conditions or defects are corrected.

The Responsible Party's system must be open for inspection at all reasonable times to authorized representatives of the City to determine whether unprotected cross-connections or other structural or sanitary hazards, including violations of the CCC Plan or other regulations, exist. When such a condition becomes known, the City shall deny or immediately discontinue service to the premises until the Responsible Party has corrected the condition(s) in conformance with the City CCC Program.

The City, upon an assessment of the risk of contamination posed by the Responsible Party's plumbing system and use of water, may allow a single-family residential premises to connect to the Distribution System without a City-approved backflow prevention assembly.

Conditions for Service

By agreeing to start utility services, the Responsible Party agrees to comply with all regulations pertaining to such services pursuant to requirements in the City of Santa Maria Municipal Code and the following conditions for service.

- The Responsible Party agrees to take all measures necessary to prevent contamination of the plumbing system within their premises and the City Distribution System that may occur from backflow through a cross-connection. These measures must include the prevention of backflow under any backpressure or backsiphonage condition, including during a disruption of water supply from the City's system that may occur during routine system maintenance or during emergency conditions, such as a water main break.
- The Responsible Party agrees to install, operate, and maintain their plumbing

system in compliance with the current edition of the California Plumbing Code (CPC), City standards, and the Santa Maria Municipal Code.

- For cross-connection control or other public health-related surveys, the Responsible Party agrees to provide access to all parts of the premises during reasonable working hours for the City employees or agents to provide routine surveys.
- The Responsible Party agrees to provide access to all parts of the premises at all times during emergencies.
- The Responsible Party agrees to bear all costs for the installation, testing, repair, maintenance, and replacement of the Responsible Party's backflow prevention assembly.
- If required by the City, the Responsible Party agrees to submit, to the City, plumbing plans and/or a cross-connection control survey of the premises conducted by a City-approved and certified Cross-Connection Control Specialist. The cost of the survey will be borne by the Responsible Party.
- The Responsible Party agrees to complete and submit, to the City, a "Water Use Questionnaire" for the purpose of surveying the health hazard posed by the Responsible Party's plumbing system to the City Distribution System.
- The Responsible Party agrees to obtain prior approval from the City for changes in water use, alterations, and additions to the plumbing system that may increase the contamination risk to the City Distribution System. The Responsible Party agrees to comply with any additional requirements imposed by the City for cross-connection control.
- The Responsible Party agrees to immediately notify the City and the local health jurisdiction of any backflow incident or possibility of backflow incident occurring at the Responsible Party's premises (i.e., entry of any contaminant/pollutant into the drinking water) and shall cooperate fully with the City to determine the reason for the backflow incident.
- The Responsible Party acknowledges the right of the City to discontinue the water supply within 72 hours of giving notice to the Responsible Party, or a lesser period of time if required to protect public health, if the Responsible Party fails to cooperate with the City in the survey of premises, in the installation, maintenance, repair, inspection, or testing of backflow prevention assemblies or air gaps required by the City, or in the City's effort to contain a contaminant or pollutant that is detected in the Responsible Party's system.
- The Responsible Party acknowledges and agrees to comply with the right of the City, in keeping with changes to California State regulations, industry standards, or the City's risk management policies, to impose retroactive requirements for additional cross-connection control measures.
- The SWRCB, and City may, at their discretion, require a water user to designate a User Supervisor when the user premises has a multi-piping system that conveys various types of fluids and where changes in the piping system are frequently made.

Backflow Prevention Assembly Determination

The City will ensure that actual and potential cross-connections are eliminated when possible or controlled by the installation of approved BPAs or air gaps (AG) consistent with the requirements of the CCCPH.

Existing Backflow Prevention Assemblies

All presently installed BPAs which do not meet the requirements of the CCC Program but which were approved assemblies for the purposes described at the time of installation and which have been properly maintained, are, except for the field testing and maintenance requirements, excluded from the requirements of these rules so long as the City is satisfied that the installed BPA will adequately protect the City Distribution System.

Whenever an existing BPA is moved from its present location, is in need of major repair or when the City finds that the maintenance constitutes a hazard to health, the Responsible Party will replace the existing BPA with an approved backflow prevention assembly meeting the CCC Program requirements. Nothing herein relieves the Responsible Party from obligations to alter the BPA based on a change of use or a hazard assessment.

Requirements

- The City will require that all new, non-residential, water service connections be isolated with an RP. All service connections identified as high hazard or identified in Appendix D of the CCCPH shall be isolated with an RP or AG as appropriate.
- The City will require that existing, non-residential, water service connections identified as a high hazard through hazard assessment be isolated with an RP. All service connections identified as high hazard or identified in Appendix D of the CCCPH must be isolated with an RP or AG as appropriate.
- The City will require all new residential water connections with facilities identified as high hazard or identified in Appendix D of the CCCPH be isolated with an RP. All BPA requirements for existing residential connections will depend on the outcome of a hazard assessment.
- The City will require that all new, non-residential, water service connections with metered fire protection systems be isolated with an RP and unmetered fire protection systems be isolated with an RPDA[2].
- The City will require that all existing, non-residential, water service connections with fire protection systems be isolated with a DCDA[2] or RPDA within 10 years of the effective date of the CCCPH.
- The City will require all high hazard fire protection systems, including but not limited to, fire protection systems that have the potential to utilize chemical addition (e.g., wetting agents, foam, anti-freeze, corrosion inhibitor) or an auxiliary water supply, be isolated with a RP or RPDA by July 1, 2034.

[2] Detector assembly not required if system is metered.

- The City of Santa Maria Fire Department does not use firefighting foams or other chemical additives in fire apparatus water tanks or for injection into fire sprinkler system Fire Department Connections (FDCs). The City will continue to monitor fire department activities and procedures regarding use of firefighting foams or chemical additives.
- The City will utilize hazard assessments for determination if an FDC is within 1,700 feet of an auxiliary non-potable water source. If an auxiliary non-potable water source is present, an RP or RPDA will be required for fire services with an FDC.
- Existing DCDAs, in which a FDC is present, and which do not trigger high hazard premises containment, can remain in place until they are in need of major repair or are no longer an approved BPA per the USC List of Approved Backflow Prevention Assemblies.

- The City will require all residential connections with fire protection systems to be isolated with a DC or RP within 10 years of the effective date of the CCCPH.
  - Residential connections with fire protection systems capable of meeting all the following criteria will not be required to install a BPA.
    - The residential premises has only one service connection to the Distribution System.
    - A single service line onto the residential premises exists that subsequently splits on the property for domestic flow and fire protection system flow, such that the fire protection system may be isolated from the rest of the user premises.
    - A single, water industry standard, water meter is provided to measure combined domestic flow and fire protection system flow.
    - The fire protection system is constructed of piping materials certified as meeting NSF/ANSI Standard 61.
    - The fire protection system's piping is looped within the structure and is connected to one or more routinely used fixtures (such as a water closet) to prevent stagnant water.
- The City will require temporary water connections to be equipped with an RP.
- The required premises containment shall be purchased, installed, tested, inspected, and maintained at the Responsible Party's expense in accordance with City standards, Santa Maria Municipal Code, and the CCC Program.

Additional Premises Requiring Premises Containment

The following list includes premises and activities requiring backflow protection with level indicated.

- Any multi-family premises[3] – RP.
- Any premises with piping for livestock – RP.
- Any premises/activity as determined by the Director of Utilities to present a hazard to the PWS – RP.

[3] The determination of a multi-family premise will be made by the Director of Utilities.

Backflow Prevention Assembly Requirements

The City will require that all backflow prevention assemblies be approved through both laboratory and field evaluation tests performed in accordance with standards found in the *Manual of Cross-Connection Control, Tenth Edition*, or any successor edition, published by the University of Southern California Foundation for Cross-Connection Control and Hydraulic Research.

Installation Criteria for Backflow Protection

Each BPA and AG separation must be accessible for field testing, inspection, and maintenance.

Installation Requirements

BPA Installation Requirements are as follows.

- As close as practical to the water service connection. Exceptions require approval on a case-by-case basis.
- Installed in the orientation for which they are approved.
- Installed in a manner and location that facilitates their proper orientation, maintenance, and testing or inspection.
- Installed in a manner that will protect them from weather related conditions such as flooding and freezing.
- Installed in compliance with applicable safety regulations.
- In no case shall a cut, tee, or tap be made between the Responsible Party's point of connection to the City distribution system and the backflow prevention assembly intended for premises containment.
- RP assemblies shall be installed with a minimum side clearance of twelve inches, except that a minimum side clearance of twenty-four inches must be provided on the side of the assembly that contains the test cocks. City may approve alternate clearances provided that there is adequate clearance for field testing and maintenance.
- No post-manufacture modifications to backflow prevention assemblies shall be accepted.
- Installed in accordance with the installation standards outlined in the most recently published edition of the CCCPH, or University of Southern California Foundation for Cross-Connection Control and Hydraulic Research (USCFCCCHR) Manual of Cross-Connection Control.
- Installations shall conform to standard drawings and specifications of the City.

Air Gap Requirements

- The receiving water container must be located on the Responsible Party's premises at the Responsible Party's service connection unless an alternate location has been approved by the City.
- All piping between the Responsible Party's service connection and the discharge location of the receiving water container must be above finished

grade and be accessible for visual inspection unless an alternative piping configuration is approved by the City.

- The City will inspect the installed AG to ensure that the AG has been installed as required by City standards, Santa Maria Municipal Code, and the CCC Program.
- Any new AG installation at a Responsible Party's service connection must be reviewed and approved by the State Water Board prior to installation.

Schedule for Installation of BPAs

The following table shows the schedule that the City will follow for installation of BPAs when required (based on the hazard assessment).

The City may consider granting an extension of 30 days for installation of BPA for an existing connection if requested by the premises owner.

Type of Service	Schedule
New connections with identified hazards	Before water service is initiated
Existing connections with Appendix D-type hazards and other high hazard cross-connection potential	Within 90 days after notification
Existing high hazard fire protection systems	Within 90 days after notification
Existing non high hazard fire protection systems	Within 180 days after notification

Enforcement

When the Responsible Party fails to install the required backflow protection within 30 days after the due date specified, the City will send a second notice giving the Responsible Party an additional 30 days to comply. The notice will also inform the Responsible Party that failure to satisfactorily respond to this notice will result in penalties in accordance with Element 5 of this Cross-Connection Control Plan and Chapter 8-10A Cross-Connections of the Santa Maria Municipal Code. Penalties can include fines or disconnection of water service or both.

(This space is intentionally blank.)

Element 3 – Certified BPA Testers and Certified CCC Specialists

All BPA testers and cross-connection control specialists performing work in the City's service area must be certified per requirements of the CCCPH, City standards, Santa Maria Municipal Code, and the CCC Program (this Cross-Connection Control Plan is a component of the CCC Program).

Backflow Incident Reporting Obligations of BPA Testers

The City requires backflow prevention assembly testers to notify the City as soon as possible, and within 24 hours, if a backflow incident or an unprotected cross-connection is observed at the BPA or prior to the Responsible Party premises during field testing.

The City will require backflow prevention assembly testers to notify the City if a Responsible Party, or City owned BPA is observed to have been modified from its original approval.

Pre-Approved Lists

Certified BPA Testers and Cross-Connection Control Specialists must be included on the City's pre-approved list to provide testing in the City's service area. Application must be made to the Utilities Department on forms provided, which will include but not be limited to the following:

- Evidence of current certification, as recognized in the CCCPH, in good standing.
- Make, model, and serial number of field-testing equipment (BPA Testers only).
- Evidence of test equipment verification of accuracy and/or calibration within the past 12 months (BPA Testers only).
- Evidence of a current City Business License.

The Utilities Department will maintain a list of certified BPA Testers and Cross-Connection Control Specialists that have been pre-approved. The lists will be revised as necessary.

Denial, Suspension or Revocation of BPA Tester or Cross-Connection Control Specialist Approval

BPA Tester/Cross-Connection Control Specialist Approval by the City may be denied, suspended, or revoked for any of the following reasons:

- A BPA Tester is no longer in possession of a current and valid certificate as a Backflow Prevention Assembly Tester issued by the approved certification entity as determined by the City.
- A BPA Tester is no longer in possession of a current and valid test kit

calibration certificate.

- A Cross-Connection Control Specialist is no longer in possession of a current and valid certificate as a Cross-Connection Control Specialist issued by the certification entity as determined by City.
- The City determines that a material misrepresentation was included or omitted by the BPA Tester or Cross-Connection Control Specialist on the initial or renewal application for BPA Tester or Cross-Connection Control Specialist certification.
- The City determines that the BPA Tester, in the performance of a test or repair required by the City, commits an act that may pose a threat to public health and safety.
- A BPA Tester repeatedly submits incomplete or incorrect test reports to the City.
- A BPA Tester fails to report an assembly that has been modified or incorrectly installed.
- The City determines that a material misrepresentation was included or omitted by the BPA Tester on the backflow assembly test report form submitted to the City by the BPA Tester.
- A BPA Tester performs a backflow prevention assembly repair with parts other than OEM parts.
- A BPA Tester performs a backflow assembly test using testing procedures other than those accepted by the City.
- A BPA Tester or Cross-Connection Control Specialist fails to report a cross-connection hazard that is unprotected, that is, with no backflow prevention assembly or the wrong type of assembly.
- A BPA Tester fails to report the removal or replacement of a backflow prevention assembly on a Backflow Prevention Assembly Test Report.
- A BPA Tester performs a repair upon a backflow prevention assembly which has been required to be replaced by the City.
- If a BPA Tester or Cross-Connection Control Specialist has unresolved Responsible Party complaints or complaints from multiple Responsible Parties.
- If a BPA Tester or Cross-Connection Control Specialist commits fraud or gross negligence in the performing of their duties.
- If a BPA Tester or Cross-Connection Control Specialist is removed for cause from another water agency's list of approved BPA Testers or Cross-Connection Control Specialists.
- Does not possess a current City Business License.

The City may deny, suspend, or revoke a BPA Tester or Cross-Connection Control Specialist approval for a period between five (5) days and one year, at the discretion of the Director of Utilities.

Appeals

- Any Denial, Suspension, or Revocation of BPA Tester or Cross-Connection Control Specialist Approval is appealable pursuant to *Santa Maria Municipal*

Code Chapter 8-1.07.

- An appeal must be received by the City on or before the effective date of suspension or revocation.
- The decision shall be a final decision, with no further right of appeal.

Quality Assurance

- The City shall provide follow-up on deficient backflow assemblies or test reports.
- The City may conduct follow up tests on backflow assemblies tested by a BPA Tester at the discretion of the City.
- The City will report incidents of fraud or gross incompetence on the part of any certified tester to the certifying organization.

(This space is intentionally blank.)

Element 4 – Backflow Prevention Assembly Testing

The following procedure will ensure all BPAs are field tested, inspected, and maintained and that AGs are inspected and maintained in accordance with the CCCPH, City standards, Santa Maria Municipal Code, and the CCC Program.

Inspection and Testing of Backflow Preventers and Air Gaps

All BPAs relied upon for protection of the City distribution system will be subject to inspection and testing as applicable. This includes BPAs installed for internal protection within a user's premises. The City must have access to the premises to verify that the on-site protection meets the requirements of the CCCPH, City standards, Santa Maria Municipal Code, and the CCC Program for installation, field testing, and inspections.

BPAs

- A certified and City approved Cross-Connection Control Specialist will inspect BPAs for proper application (i.e., to ensure that the installed BPA is commensurate with the assessed degree of hazard).
- A City approved certified Cross-Connection Control Specialist or BPA Tester will perform inspections of backflow preventers for correct installation.
- A certified and City approved BPA Tester will test all assemblies.

Air Gaps

- The City approved and certified Cross-Connection Control Specialist or BPA Tester will visually inspect AG separations at Responsible Party premises when hired to do so to determine compliance.

Frequency of Inspection and Testing

Inspection and testing of BPAs and/or AGs will be conducted at the following times.

- At the time of installation.
- Annually (approximately 12 months) or more frequently after installation.
- After a backflow incident.
- After BPA repair, reinstallation, relocation, or re-plumbing.

All AG separations will be inspected annually and after modifications to the installation.

The City may require a BPA or AG to be inspected and/or tested more frequently than once a year.

Responsibility for Inspection and Testing

The City will be responsible for inspection and testing of City owned BPAs and AGs.

The Responsible Party is responsible for hiring a City approved certified BPA Tester or Cross-Connection Control Specialist for inspection and testing of BPAs. Testing and inspection of Responsible Party BPAs will be at the Responsible Party's expense.

Notification of Inspection and/or Testing

The City will notify the Responsible Party to have their BPA(s) inspected and/or tested. Notices will be sent out not less than 30 days before the due date of the inspection and/or test and will be via a hardcopy letter sent via mail or using electronic communications. The notice will also specify the date by which the inspection or test report must be received by the City. If the City has not received a passed test report in the designated time frame, enforcement policies will be applied.

Approved Test Procedures

The City requires all BPAs protecting the City's public water system be tested at least annually in accordance with approved test procedures as specified in CCCPH (*Manual of Cross-Connection Control, Tenth Edition, or any successor edition,* published by the University of Southern California Foundation for Cross- Connection Control and Hydraulic Research).

Repairs

Any BPA that fails routine testing shall be repaired within thirty (30) days of the initial test date. The cost will be borne by the Responsible Party.

The Responsible Party must notify the City if repairs cannot be made within the specified period.

Only Original Equipment Manufacturer (OEM) parts will be used to repair BPAs. If OEM replacement parts are not available, then a replacement approved backflow prevention assembly must be installed to replace the existing assembly.

The City shall determine the level of risk the failed assembly presents to the water supply and, if necessary, discontinue water service.

Should repair costs exceed $500.00, or if the assembly must be replaced, such work must be completed by a California State Licensed Contractor.

Element 5 – Enforcement

Conditions for Disconnection

To enforce this CCC Plan, it may become necessary to discontinue water service through connection(s) to the premises, or premises under common control. Conditions that warrant discontinuance of service include, but are not limited to, the following.

- The City identifies a water use that represents a clear and immediate hazard to the City Distribution System that cannot be immediately abated.
- Direct or indirect connection between the City Distribution System and a sewer line.
- An unprotected direct or indirect connection between the City Distribution System and an auxiliary water system.
- The Responsible Party refuses to inspect an AG separation.
- The Responsible Party refuses to install a required BPA.
- The Responsible Party refuses to test a BPA.
- The Responsible Party refuses to repair or replace a faulty BPA.
- The Responsible Party refuses to upgrade a BPA to the necessary level of protection.
- The Responsible Party refuses to comply with the requirements set forth in the CCC Plan.

Annual Testing Conditions for Disconnection

When a Responsible Party fails to submit the Annual Test and Maintenance Report within 30 days after the established due date and the City has not approved an extension to the due date, the City will take the following enforcement actions.

- The City will send a second notice notifying the Responsible Party of the past due test(s). The notice will also inform the Responsible Party that failure to satisfactorily respond to this notice will result in the enforcement of penalties in accordance with the legal authority of the City.
- If the Responsible Party has not responded satisfactorily to the City within 30 days of the second notice, the City will implement penalties in accordance with its legal authority. If the Responsible Party's water service is discontinued due to violations of this Program, the Responsible Party will be subject to payment of the Delinquency Shut Off Fee specified in the City's current rates. Upon seeking renewed service from the City, the backflow prevention assembly being returned to service must be tested in accordance with City requirements.

When a Responsible Party fails to submit an Annual Test and Maintenance Report showing the repairs and/or replacement of a BPA that failed a test within 30 days after the initial test date indicated on the test form, and the City has not approved an extension to the due date, the City will take the following enforcement actions.

- The City will send a second notice notifying the Responsible Party of the past due test(s). The notice will also inform the Responsible Party that failure to satisfactorily respond to this notice will result in the enforcement of penalties in accordance with the legal authority of the City.
- If the Responsible Party has not submitted the passing inspection/test report within 30 days of the due date given in the second notice, the City will implement penalties in accordance with its legal authority. If the Responsible Party's water service is discontinued due to violations of this Program, the Responsible Party shall be subject to Delinquency Shut Off Fee specified in the City's current rates. Upon seeking renewed service from the City, the backflow prevention assembly being returned to service must be tested in accordance with City requirements.

Nothing in this section inhibits the City's ability to discontinue water service to protect the City's Distribution System in addition to the remedies identified in this section.

Removal of BPA is Grounds for Disconnection

In addition to the grounds for termination set forth in this section, the City may terminate water service to any premises if a required BPA or AG is removed, or if the City finds evidence that an installed BPA or AG has been bypassed or rendered ineffective.

Reported Backflow Incident Investigation and Disconnection

The City will discontinue service to the premises if a backflow incident or likely backflow incident is reported and confirmed. Water service will not be restored to that premises until the City receives confirmation of a passing BPA field test from a certified and City approved backflow prevention assembly tester demonstrating that the installed backflow protection assembly is protecting the Distribution System.

Appeal of Enforcement Decisions

Any Enforcement Decision by the City is appealable pursuant to *Santa Maria Municipal Code Chapter 8-1.07.*

(This space is intentionally blank.)

Element 6 – Backflow Incident Response, Reporting, and Notification

The procedures discussed in this element of the Cross-Connection Control Plan are for investigating and responding to suspected or actual backflow incidents.

Backflow Incident Response Procedure

The City will follow the incident response procedures outlined in the City of Santa Maria Backflow Incident Response Plan, see Attachment B.

Backflow Incident Response Plan

- Notification of affected service area population.
- Notification and coordination with other agencies, such as the State Water Board, and the local health jurisdiction.
- Identification of the source of backflow substance.
- Isolation of the source of backflow substance and the affected area(s).
- Mitigation measures to correct the problem.
- Application of corrective actions to prevent future backflow occurrences.
- Documentation of the backflow incident investigation, response, and follow-up actions.

Backflow Incident Notification

Other: (805) 346-8470

Santa Barbara Public Health Department EMS
Day: (805) 694-8301
Evening: (805) 694-8301

Element 7 – Recordkeeping

The City will implement a recordkeeping system in accordance with the CCCPH. The records the City will keep are identified in the following list. The Responsible Party will have the duty to submit all records and documentation of any and all inspections, tests, repairs, renovations, rebuilds, restorations, or replacements of backflow assembly(s) to the City of Santa Maria Utilities Department.

- The two most recent hazard assessments for each user premises, conducted pursuant to the CCC Program.
- The associated hazard or application, location, owner, type, manufacturer, model, size, installation date, and serial number for each BPA.
- The associated hazard or application, location, owner, as-built plans for each AG installation.
- Results of all BPA field testing, AG inspection, swivel-ell inspections and field tests, for the previous three calendar years, including the name, test date, repair date, and certification number of the backflow prevention assembly tester for each BPA field test, AG, and swivel-ell.
- Replacement, relocation, or repairs made to BPAs for the previous three calendar years.
- The most current cross-connection tests.
- If a user supervisor is designated for a user premises, the City will keep record of current contact information for the user supervisor and water user, and any applicable training and qualifications as described by the CCCPH.
- Descriptions and follow-up actions related to all backflow incidents.
- A copy of the current contract or agreement, if any portion of the cross-connection control program is carried out under contract or agreement.
- The current Cross-Connection Control Plan as required in the CCCPH.
- Any public outreach or education materials issued as required in the CCCPH for the previous three calendar years.

All information will be available to the State Water Board upon request.

The City will maintain records using the following methods.

Item	**Method (Digital, hard copy, both, or other - describe)**
Hazard Assessments	**Digital**
BPA Information	**Digital**
Air Gap, Swivel-El Information	**Digital**
BPA field test/ inspection reports	**Digital**
BPA Installation, Repair, Replacement	**Digital**

Item	Method (Digital, hard copy, both, or other - describe)
Certification information of BPA Testers and Cross-Connection Control Specialists	**Digital**
Backflow Incident Documentation	**Digital**
Current Cross-Connection Tests	**Digital**
User Supervisors (if required)	**Digital (if required)**
Follow-up Actions	**Digital**
Public Outreach, Education Materials	**Both**
Current Cross-Connection Control Plan	**Digital**

(This space is intentionally blank.)

Element 8 – Public Outreach and Education

The City will implement a cross-connection control public outreach and education program that includes educating staff, Responsible Party's, and the community about backflow protection and cross-connection control. The City may choose to implement this through a variety of methods, such as the methods listed below.

- Periodic water bill inserts.
- Pamphlet distribution.
- Email.
- New customer documentation.
- Consumer Confidence Reports.
- City Website: https://www.cityofsantamaria.org

Local Entity Coordination

The City will coordinate with applicable local entities that are involved in either cross-connection control or public health protection to ensure hazard assessments can be performed, appropriate backflow protection is provided, and provide assistance in the investigation of backflow incidents. Local entities may include but are not limited to plumbing, permitting, or health officials, law enforcement, fire departments, maintenance, and public and private entities.

Local Entity	**Contact Name**	**Contact Info (Phone, email)**
City of Santa Maria Fire Department	Fire Marshal	(805)925-0951 *2255
City of Santa Maria Utilities Department	Water Distribution Supervisor	(805)925-0951 *7411

(This space is intentionally blank.)

Attachment A

Copy of legal authority used to implement Cross-Connection Control Plan.

Attached is a Draft Ordinance to be considered by the City Council.

ORDINANCE NO. 2026-

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF SANTA MARIA, CALIFORNIA, AMENDING CHAPTERS 8-10A AND CHAPTER 8-1 OF TITLE 8 OF THE SANTA MARIA MUNICIPAL CODE CONCERNING CROSS-CONNECTIONS AND APPLICATIONS FOR PUBLIC SERVICE

The City Council of the City of Santa Maria, State of California, does ordain as follows:

SECTION 1. Chapter 8-10A of Title 8 of the Santa Maria Municipal Code ("SMMC") concerning Cross-Connections is amended as follows:

Section 8-10A.01. Purpose.

(a) To protect the public Potable Water supply of the City of Santa Maria from the possibility of contamination or pollution by isolating within the Responsible Party's internal or private water system(s) such contaminants or pollutants which could Backflow into the public water distribution system; and

(b) To promote the elimination or control of existing cross-connections, actual or potential, between the Responsible Party's in-plant Potable Water system(s) and non-potable water system(s), plumbing fixtures, and industrial piping system(s); and

(c) To provide for the maintenance of a continuing program of Cross-Connection control which shall systematically and effectively prevent the contamination or pollution of the publicly owned Potable Water system.

(d) To provide outreach and education on Cross-Connections to the community, water customers, and City staff.

(e) To meet the State of California's cross-connection control program standards.

Section 8-10A.02. Definitions.

"Approved" means accepted by the Director of Utilities as meeting an applicable specification stated or cited in this ordinance, the Cross-Connection Control Plan, or as suitable for the proposed site.

"Approved Backflow Prevention Assembly" or "BPA" means a mechanical assembly designed and constructed to prevent Backflow, such that while in-line it can be maintained and its ability to prevent Backflow, as designed, can be field tested, inspected and evaluated.

"Backflow" means an undesired or unintended reversal of flow of water and/or other liquids, gases, or other substances into a public water system's distribution system or approved water supply.

"Cross-Connection" means any actual, potential, or temporary connection (such as swing connections, removable sections, four-way plug valves, spools, dummy sections of pipe, swivel or change-over devices, sliding multiport tubes, or similar) or structural arrangement between the public Potable Water distribution system, including a piping system connected to the Distribution System and located on the Premises of a water user or available to the water user, and any source or system containing liquid, gas, or other substances that may enter the public Potable Water system.

"Cross-Connection Control Plan" or "CCC Plan" means the City's guiding document establishing the methods, procedures, and policies the City has in place to comply with the requirements of the Cross-Connection Control Policy Handbook.

"Cross-Connection Control Policy Handbook" or "CCCPH" means the State of California cross-connection control (CCC) program standards as established in the CCCPH, which became effective July 1, 2024, and are incorporated into the State of California's Drinking Water Regulations. The CCCPH and its standards apply to all California public water systems (PWSs), as defined in California's Health and Safety Code (CHSC, section 116275 (h)). Compliance with this CCCPH is mandatory for all California PWSs. The CCCPH updated and replaced Title 17 of the California Code of Regulations.

"Director of Utilities" means the administrator/manager in charge of all aspects of the Utilities Department.

"Distribution System" means the network of conduits used for the delivery of Potable Water from the source to the Responsible Party's water system.

"Operational Tests" means BPA tests performed to test the functioning capabilities of the assembly using a properly calibrated differential pressure gauge and performed as published in the Manual of Cross-Connection Control – Tenth Edition, or any successor edition.

"Potable Water" means water which is satisfactory for drinking, culinary, and domestic purposes and meets the requirements of the United States Environmental Protection Agency (USEPA) or its successor organization.

"Premises" means any location, building, structure, residence, garage, room, shed, shop, store, dwelling, lot, parcel, land or portion thereof, whether improved or unimproved.

"Responsible Party" means the owner, operator, manager or occupant of a Premises which has water service from a public Potable Water distribution system; the owner, manager or operator of a private water system that has water service from a public Potable Water distribution system.

"Service Connection" means the terminal end of a tie-in to the public Potable Water system; i.e., the location where the City of Santa Maria loses jurisdiction and sanitary control over the water. If a City-owned meter is installed at the end of the tie-in to the public Potable Water system, then the Service Connection generally means the downstream end of the meter.

"Service Line" means private piping extending from the Service Connection to the Responsible Party's point(s) of use.

"Water System" means the piping and all related appurtenances providing Potable Water to a Premises. In the City of Santa Maria, the water system is made up of two parts:

(1) The public Potable Water distribution system includes all the facilities and the network of conduits used for the delivery of water that remain under the control of the City of Santa Maria up to the point where the Responsible Party's system begins.

(2) The Responsible Party's system includes those parts used for the delivery of water to points of use located on the responsible party's Premises beyond the termination of the public Potable Water distribution system.

Section 8-10A.03. Authority of Director of Utilities.

The Director of Utilities shall have the authority to prepare, amend, and enforce the Cross-Connection Control Plan to protect the public Potable Water distribution system from contamination or pollution due to the Backflow of contaminants or pollutants through the Service Connection and to comply with the Cross-Connection Control Policy Handbook.

Section 8-10A.04. Requirements.

(a) By agreeing to start or continuing to accept utility services, the Responsible Party agrees to comply with all regulations pertaining to such services pursuant to requirements in the Santa Maria Municipal Code and the Conditions for Service established in the Cross-Connection Control Plan.

(b) No Responsible Party will install, maintain, or change a Service Connection or Service Line without first complying with the CCC Plan.

Section 8-10A.05. Enforcement, Violations, and Penalties.

(a) A violation of the CCCP is a violation of this ordinance.

(b) A Notice of Violation will be given to any Responsible Party found to be in violation of any provision of this ordinance or the adopted CCC Plan. The Responsible Party shall correct the violation within the time frame given in the Notice of Violation. If the Director of Utilities, or his/her designee, determines that the violation is creating or contributing to the existence of an imminent hazard, the Responsible Party shall correct the violation immediately. In any case of violation, the Director of Utilities has the authority to discontinue water service at any time the Director of Utilities determines the violation causes an imminent risk to the public Potable Water distribution system or Potable Water supply.

(c) Water service may be terminated after a second notification of violation of the same provision within a one-year period. Any person violating any provision of this ordinance shall pay to the City all expenses incurred by the City in repairing any damage to the public Potable Water distribution system or actions required by the City to be taken to protect the Potable Water supply caused in whole or in part by such violation and any expense incurred by the City in investigating such violation.

(d) In addition to other remedies in this ordinance, any Responsible Party violating any of the provisions herein is guilty of a misdemeanor and upon conviction thereof is punishable in accordance with Chapters 1-6 of the Santa Maria Municipal Code (SMMC). As additional remedies, any Responsible Party in violation of this code may be subject to summary abatement proceedings, restraining order, injunction issued by a court of competent jurisdiction, administrative citation pursuant to Chapter 1-9 of the SMMC, administrative penalty pursuant to Chapter 1-8 of the SMMC code, or any other remedy provided by law.

SECTION 2. Chapter 8-1.07 of Title 8 of the Santa Maria Municipal Code ("SMMC") concerning Cross-Connections is amended as follows:

Section 8-1.07 Appeals

In the event that any user or consumer is aggrieved by any ruling of the Director of Utilities made pursuant to any of the provisions of this chapter and Chapters 8-9, 8-10, 8-10A, and 8-13, such consumer or user may appeal from such ruling to the City Manager within the time and in the manner set forth in Section 8-12.1406. The City Manager's action on such appeal shall likewise be made and become final pursuant to the provisions of Section 8-12.1406.

SECTION 3. This Ordinance has been reviewed for compliance with the California Environmental Quality Act (CEQA), and the CEQA guidelines, and the City's environmental procedures, and has been found to be exempt pursuant to Section 15601(b)(3) (general rule) of the CEQA Guidelines, because the City Council hereby finds with certainty that there is no possibility the passage of this Ordinance amending the public facilities and services code will have a significant effect on the environment.

SECTION 4. If any part or provision of this chapter, or the application thereof to any person or circumstance, is held invalid, the remainder of the chapter, including the application of that part or provision to other persons or circumstances, shall not be affected thereby and shall continue in full force and effect. To this end, the provisions of this ordinance are severable.

SECTION 5. This Ordinance shall be in full force and effect 30 days after its passage. Within 15 days following its passage, the City Clerk shall cause this Ordinance to be published in a newspaper of general circulation in accordance with State Law; or when deemed necessary due to the length or complexity of the Ordinance, cause a summary of the Ordinance to be prepared and published at least five days prior to the City Council meeting at which the proposed Ordinance is to be adopted. If a summary is published at least five days prior to the City Council meeting at which the proposed Ordinance is to be adopted, then within 15 days after adoption of the Ordinance the City Clerk shall publish a summary of the Ordinance with the names of those City Council Members voting for and against the Ordinance and shall post a certified copy of the full text of such adopted Ordinance along with the names of those City Council Members voting for and against the Ordinance.

SECTION 6. The Chief Deputy City Clerk is hereby authorized to make minor changes herein to address clerical errors, so long as substantial conformance of the intent of this document is maintained. In doing so, the Chief Deputy City Clerk shall consult with the City Manager and City Attorney concerning any changes deemed necessary.

Attachment B

City of Santa Maria Backflow Incident Response Plan

City of Santa Maria Backflow Incident Response Plan

The City will notify the State Water Board and local health agencies of any known or suspected incident of backflow within 24 hours of the determination. If required by the State Water Board, the City will issue a Tier 1 public notification pursuant to CCR, Title 22, Section 64463.1.

If required by the State Water Board, the City will submit, by a date specified by the State Water Board, a written incident report describing the details and affected area of the backflow incident, the actions taken by the City in response to the backflow incident, and the follow up actions to prevent future backflow incidents. The written report will contain, at a minimum, the information requested in Appendix F.

Backflow Incident Investigation

If a water quality complaint or change in water quality investigation determines that a backflow incident has or is suspected of having occurred, the City will initiate a backflow investigation.

Additionally, the City distribution system pressure is routinely monitored. If pressure readings indicate that a broad system pressure drop has occurred, which could produce a situation leading to a backflow or back-siphonage incident, the City will initiate a water quality investigation.

All information from the backflow incident investigation, according to Appendix F of the CCCPH, will be documented. The City will notify the State Water Board and local health agencies of any known or suspected incidents of backflow within 24 hours of determination.

State Water Board – Division of Drinking Water:
District 06 – Santa Barbara
Office: (805) 566-1326 Emergency: (805) 440-9627
Santa Barbara County Environmental Health:
Day: (805) 346-8463 Evening: (805) 315-5805
Day: (805) 346-8470 Evening: (805) 346-8470

Santa Barbara Public Health Department EMS:
Day: (805) 694-8301 Evening: (805) 694-8301

Consumer Notification

- The City will notify all consumers of an upset in water quality and advise not to use or boil water prior to use, as appropriate. The City will default to AWWA recommendations for boil water advisory.
- The City will follow the City's *Water Quality Emergency Notification Plan*. Notices shall be circulated via the following manner.
    - Electronic notification using the City's "Everbridge" text and call system or Wireless Emergency Alert
    - City social media
    - City webpage
    - Local TV
    - Local Radio
    - Local News
- The notifications will be issued in both English and Spanish.
- Police and Fire Department vehicles equipped with portable speakers are available to traverse the City limits for further dissemination if the electronic notifications systems require backup.
- A telephone answering service will be established at the dispatch center to answer questions until the City's Emergency Operations Center (EOC) can be manned and calls can be transferred to the staff there.
- Notification via "Everbridge", WEA, and social media can be accomplished in a very short time. If needed, sound trucks will take approximately two hours to traverse the entire City limits. Sound truck notification will be on a one-time basis while radio and television coverage will continue as needed.

Originating Premise Location

- The City will attempt to locate the originating premise or area prior to flushing the distribution system.
- The City will conduct a thorough investigation until the originating premise location of the backflow incident is identified.
- After identification, the City will work with the originating premise location to identify all possible contaminant sources from the backflow incident.

Premise Containment / System Containment

- After source identification, the City will verify that the backflow origination premise has been contained.
- The City will verify if any part of the distribution system needs to be contained and contain it appropriately.

Disinfection of the System

- The City will collect a water sample or samples before flushing or disinfection of the system has been initiated.
- The City will flush and/or disinfect contaminated service lines. The City will default to AWWA recommendations for flushing procedures and in-house SOP procedures for disinfection.
- As appropriate, affected customers will be advised to adequately flush service lines.

Sampling Requirements

- The City will collect a water sample or samples before flushing or disinfection of the system has been initiated.
- The City will submit the water samples to a laboratory or conduct field sampling for the following parameters (DDW recommended parameters):
    - Total Coliform
    - E. coli
    - Free and Total Chlorine Residual
    - Odor
    - Turbidity
    - Temperature
    - Color

Corrective Actions

- After completion of the backflow incident investigation, the City will review all findings to assure appropriate backflow protection measures are implemented for the originating premise location.

BACKFLOW INCIDENT REPORT FORM (Minimum Requirements)

Water System: _____

Water System Number: _____

Incident Date: _____

Incident Time (if known): _____

Incident Location: _____

How was the incident discovered? _____

Backflow Origin

Premise Location: _____

Address: _____

Premise Contact Person: _____ Title: _____

City of Santa Maria Cross-Connection Control Questionnaire

CITY OF SANTA MARIA
UTILITIES DEPARTMENT
Business • Solid Waste • Water Resources

2065 EAST MAIN STREET • SANTA MARIA, CALIFORNIA 93454-8026 • (805) 925-0951 EXT. 7270 • FAX (805) 928-7240

Cross-Connection Control Questionnaire

Dear Water Customer:

State Water Resources Control Board Cross-Connection Control Policy Handbook (CCCPH) Standards and Principles for California's Public Water Systems became effective July 1, 2024. *The CCCPH and its standards apply to all California Public Water Systems as defined in California's Health and Safety Code (CHSC, section 116275 (h)). Compliance with the CCCPH is mandatory for all California PWSs. The primary objective of the Cross-Connection Control Policy Handbook (CCCPH) is the protection of public health through the establishment of standards intended to ensure a public water system's (PWSs) drinking water distribution system will not be subject to the backflow of liquids, gases, or other substances.*

The CCCPH requires that each community water system conduct an initial hazard assessment on each user premise within its service area. Subsequent to the initial hazard assessment, a follow-up hazard assessment is required when certain criteria are met. To maintain compliance with the CCCPH, the City of Santa Maria is conducting a cross-connection control hazard analysis of its residential customers.

For most residential customers, there is a minimal hazard presented to the City's drinking water system. There are, however, some residential customers who have certain activities or plumbing systems which present a higher degree of hazard to the City's drinking water system. For these customers, the installation of a backflow prevention assembly on their water service line may be required.

Participation in this hazard analysis is mandatory. It may be returned via e-mail to utilities-regulatorycompliance@cityofsantamaria.org or mailed to 601 Black Rd, Santa Maria, CA 93458. If you have any questions about the analysis or how to fill out the questionnaire, please contact me at the contact information provided below.

Important Definitions:
Backflow: an undesired or unintended reversal of flow of water and/or other liquids, gases, or other substances into a public water system's distribution system or approved water supply.
Backflow prevention assembly: a mechanical assembly designed and constructed to prevent backflow, such that while in-line it can be maintained and its ability to prevent backflow, as designed, can be field tested, inspected and evaluated.

Sincerely,

Jay Maxson

Does the premises contain any situations related to Appendix D of the CCCPH?

☐ Yes ☐ No

If yes, the premises is considered high hazard.

Was access to the water user premises denied or restriced?

☐ Yes ☐ No

If yes, the premises is considered as high hazard.

Observance of cross-connections?

☐ Yes ☐ No

List the type and use of materials handled and present, or likely to be, on the user premises:

Does the premises have auxiliary water supplies, pumping systems, or pressure systems?

☐ Yes ☐ No

Notes:

Are there any distribution system conditions that increase the likelihood of a backflow event?
(e.g., hydraulic gradient differences impacted by main breaks and high water demand situations, multiple service connections that may result in flow-through conditions, etc.)

Have there been any previous backflow incidents on the user premises?

☐ Yes ☐ No

If yes, list date and incident specifics:

Degree of hazard Identified:

☐ High Hazard ☐ Low Hazard ☐ No Hazard

Does the premise have adequate protection?

☐ Yes ☐ No

COUNCIL AGENDA REPORT

TO: Mayor and City Council

FROM: David W. Rowlands, City Manager

DATE: May 5, 2026

SUBJECT: Ballot Measure Polling Survey

Description:
The City Council will receive a presentation on polling survey results for a potential ballot measure, including community priorities and support for municipal services.

Environmental Notice: The activity is not a "Project" as defined under Section 15378 of the California Environmental Quality Act State Guidelines; therefore, pursuant to State Guidelines Section 15060(c)(3) no environmental review is required.

RECOMMENDATION:

1. Receive a presentation on polling survey results for a potential ballot measure, including community priorities and support for municipal services; and
2. Provide direction to staff to draft approving resolutions for Submission of a Question to Voters regarding a proposed sales tax ballot measure to fund essential city services, as part of the General Municipal Election to be held Tuesday, November 3, 2026.

BACKGROUND:

The people of Santa Maria have spoken in support of maintaining and enhancing City services, as reflected in the latest survey poll conducted by DHM Research during March 2026. Santa Maria needs extended and enhanced local sales tax revenue to maintain and expand vital and desired municipal services. Measure U, the local one-percent sales tax measure approved in November 2018, is directed primarily (90 percent) toward public safety departments, including Police and Fire. Additional revenue through a proposed general sales tax measure would support other services that address additional priorities of the community.

DISCUSSION:

DHM Research assisted the City in conducting a survey among Santa Maria residents to assess their perceptions of and satisfaction with City services, and to gauge their support for a potential sales tax ballot measure in November. The 15-minute survey was completed by 400 likely voters between the dates of March 18 and 26, 2026, and was offered in both English and Spanish. The margin of error is ±4.9 percent.

The survey found that Santa Maria voters are divided on the City's direction. The top issues facing Santa Maria include housing affordability, crime, homelessness and cost of living. Two-thirds of voters are satisfied with the City's delivery of services. Most voters also feel their financial situation is good and do not expect their personal finances to worsen.

The survey tested the response to a proposed sales tax ballot measure, with an initial test reporting 60 percent majority support. The survey then provided additional information on measure components and reasons to support. After this step, the support increased to 74 percent, up 14 percentage points from the initial test. The survey found that likely voters react positively to each proposed use of funds, reinforcing broad appeal rather than reliance on a single priority. Maintaining parks, expanding youth services, and other funding priorities are important to voters. The survey then provided the reasons to oppose, including cost-of-living impacts. However, this did not significantly erode support for the measure, and support remains majority at 64 percent by the end of the survey.

Given these survey findings, staff asks the City Council for direction to prepare approving resolutions for a proposed sales tax ballot measure to fund essential city services, as part of the November 3, 2026, General Election. Staff would bring the resolution back to City Council in an upcoming meeting in June.
